1 Introduction

1.1 Project Overview

Covina Reliability Project LLC (Applicant) is proposing to construct and operate the Covina Reliability Project (Project), a 110-megawatt (MW) battery energy storage system (BESS) located within the City of Covina, California (City). The Project comprises two sites (east and west), with a total area of approximately 3.4 acres of private land, on Assessor's Parcel Numbers (APNs) 8429-008-029, 8429-008-028, 8429-007-007, 8429-007-006 and 8429-007-005 (Project site). The west site (APNs 8429-008-029 and 8429-008-028) is developed with two buildings currently operating with commercial, manufacturing, and light industrial uses and associated surface parking. The east site (APNs 8429-007-007, 8429-007-006 and 8429-007-005) is developed with a surface parking lot where recreational and commercial vehicles and boats are currently stored. The west site is bordered directly to the east by the Southern California Edison (SCE) Cortez Substation (APN 8429-008-800), which occupies approximately 1.32 acres of private land currently operating electrical distribution infrastructure. (Figure 1-1, Project Location).

The Project is designed to charge or discharge electricity to and from the grid via a battery energy storage system with associated on-site support components consisting of inverters, collector lines, fencing, access roads, supervisory control, a Supervisory Control and Data Acquisition (SCADA) system, and other ancillary facilities or equipment. The Project would include construction of an on-site Project substation on the west site, which will allow interconnection to the existing and adjacent SCE Cortez Substation via an overhead generation transmission (gen-tie) line (Figure 1-2A, Preliminary West Site Improvement Plan and Figure 1-2B, Preliminary East Site Improvement Plan). To facilitate operation of the Project, SCE would make various improvements to the Cortez Substation. SCE's improvements would occur within areas previously disturbed and occupied by existing electrical facilities. For the purpose of this analysis, the SCE Cortez Substation is considered an off-site impact area associated with the Project.

1.2 California Environmental Quality Act Compliance

As lead agency for the Project, the City must complete an environmental review to determine if implementation of the Project would result in significant adverse environmental impacts. To fulfill the purpose of the California Environmental Quality Act (CEQA), an Initial Study has been prepared to assist in making that determination. Based on the nature and scope of the Project and the evaluation contained in the Initial Study environmental checklist (contained herein), the City, as the lead agency, determined that a Mitigated Negative Declaration (MND) is the appropriate environmental documentation for the Project. The Initial Study shows that impacts caused by the Project are either less than significant or significant but mitigable with incorporation of appropriate mitigation measures as defined herein. This conclusion is supported by CEQA Guidelines Section 15070, which states that an MND can be prepared when "(a) the initial study shows that there is not substantial evidence, in light of the whole record before the agency, that the project may have a significant effect on the environment, or (b) the initial study identifies potentially significant effects, but (1) revisions in the project plans or proposals made by, or agreed to by the Applicant, before a proposed mitigated negative declaration and initial study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur; and (2) there is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment." This conclusion is supported by CEQA Guidelines Section 15070, which states that a MND can be prepared when "(a) the initial study shows that there is not substantial evidence, in light of the whole record before the agency, that the project may have a significant effect on the environment, or (b) the initial study identifies potentially significant effects, but (1) revisions in the project plans or proposals made by, or agreed to by the Applicant, before a proposed mitigated negative declaration and initial study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur; and (2) there is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment."

1.3 Project Objectives

California's electric grid is a complex system providing reliable power to California residents. The state relies increasingly on renewable sources of energy, such as solar, wind, geothermal, hydroelectricity, and biomass. California has installed 22,250 megawatts of utility-scale renewable energy systems, and is home to some of the largest solar, wind, and geothermal power plants in the world (CEC 2018). Grid energy storage technologies provide for multiple applications, such as energy management, backup power, load leveling, frequency regulation, voltage support, and grid stabilization. Importantly, not every type of storage is suitable for every type of application, motivating the need for a portfolio strategy for energy storage technology. As noted by the U.S. Department of Energy, "energy storage can reduce the need for major new transmission grid construction upgrades as well as augment the performance of existing transmission and distribution assets." Furthermore, "energy storage will also play a significant role in emergency preparedness and increasing overall grid resilience" (USDOE 2013).

Operation of the California electric grid involves management, regulatory oversight, and participation from numerous stakeholders. The grid is managed by the non-profit public benefit corporation California Independent System Operator. Although utilities own transmission assets, the California Independent System Operator controls the dispatch of generating facilities and operation of the transmission system.

Battery storage technology allows the energy generated by renewables to be stored and discharged back to the grid when the need arises. The technology is advancing rapidly as a grid resource and will support system load balancing

by California Independent System Operator when sun and wind resources are intermittently not available. Power from these renewable generation sources often is produced at different times of day, which may not align with peak use (CAISO 2021).

Construction of the Project would accomplish the following goals:

- Enhance grid reliability in the City of Covina and greater Los Angeles County by providing an incremental capacity resource that can be utilized by the California Independent System Operator to minimize reliance on the transmission system during periods of peak demand or transmission contingencies.
- Accommodate increasing amounts of intermittent renewable energy generation that often is not available during the early evening when energy demand is often highest.
- Provide economic benefit to the City, the region, and the state, through construction jobs, property and sales taxes, construction and maintenance services, and increased energy efficiency and reliability.
- Assist California in meeting its greenhouse gas emissions reduction goals by 2030 as required by the California Global Warming Solutions Act (Assembly Bill 32), as amended by Senate Bill 32 in 2016.
- Assist California in achieving its switch from fossil-fueled generation by allowing electricity from renewables to be stored and discharged back to the market when necessary.

In addition to these benefits to the region and California, specific benefits to the City are shown below:

- Annual property tax revenues would be payable to the City from the Project based on the site improvement value.
- A sales tax benefit may accrue during construction of the Project.
- Local benefits would accrue to the City from having the storage facility located within the City. While this helps the entire region, it would also benefit the City by maintaining the reliability and resiliency of the grid locally.

The Project would provide significant economic benefits without burdening local transportation infrastructure, sewage infrastructure, or local public services (e.g., parks and schools).

1.4 Public Review Process

In accordance with CEQA, a good-faith effort was made during the preparation of this MND to contact affected agencies, organizations, and persons who may have an interest in this Project. In reviewing the MND, public agencies and the interested public should focus on the sufficiency of the document in identifying and analyzing the Project's possible impacts on the environment. A copy of the Draft MND and related documents are available for review at the City Clerk's Office (see address below) between the hours of 8:00 a.m. to 5:00 p.m., Monday through Friday.

Comments on the MND may be made in writing before the end of the public review period. and the public review comment period is from **January 5, 2026,** to **January 26, 2026**. Following the close of the public comment period, the City will consider this MND and comments in determining whether to approve the Project.

Written comments on the MND should be received at the following address by **5:00 p.m.**, **January 26, 2026**.

INTENTIONALLY LEFT BLANK

2 Project Description

2.1 Project Location

The Project site is located in the City of Covina (City), north of San Bernardino Freeway/Interstate (I) 10 and south of I-210, in the southeast portion of Los Angeles County (County). The City is approximately 15 miles east of the City of Los Angeles. The Project site is located within a developed industrial and commercial area, located south of East Edna Place and west of Barranca Avenue. The Project site is comprised of two sites (east and west), which total approximately 3.4 acres of private land, on APNs 8429-008-029, 8429-008-028, 8429-007-007, 8429-007-006 and 8429-007-005. The west site is bordered directly to the east by the 1.32-acre SCE Cortez Substation on APN 8429-008-800.

2.2 Environmental Setting

As discussed above, the Project site comprises two sites (east and west), with a total area of approximately 3.4 acres of private land. The west site (APNs 8429-008-029 and 8429-008-028) is developed with two buildings currently operating with commercial, manufacturing, and light industrial uses and associated surface parking. The east site (APNs 8429-007-007, 8429-007-006 and 8429-007-005) is developed with a surface parking lot where recreational and commercial vehicles and boats are currently stored. The west site is bordered directly to the east by the SCE Cortez Substation (APN 8429-008-800), which occupies approximately 1.32 acres and is developed with electrical distribution infrastructure within a fenced and previously disturbed area, The SCE Cortez Substation is considered an off-site impact area associated with the Project (Figure 1-1, Project Location).

General Plan and Zoning Designations

The Project site was selected because of its zoning and its proximity to the SCE Cortez Substation, which is a suitable place to interconnect an energy storage project.

General Plan Land Use: The land use designation of the Project site is General Industrial (GI) The City's General Plan Land Use section describes GI land use as follows:

> "Industrial" land use category has been created to permit light manufacturing, processing, assembly, warehousing, and related activities plus ancillary administrative offices.

Zoning: The zoning classification for the Project site is Light Manufacturing (M-1). The City's Municipal Code defines the M-1 zoning classification as follows:

> The M-1 light manufacturing zone is intended to provide for the development of industrial uses which include fabrication, manufacturing, assembly or processing of materials that are in already processed form.

City Zoning Ordinance: Per the Covina Municipal Code Section 17.54, as amended by Zoning Code Amendment 25-2 (ZCA), battery energy storage system facilities are allowed uses within a M-1 zone with approval of a conditional use permit. The City's Municipal Code, ZCA Section 17.04.088, defines battery energy storage systems facilities as follows:

> Battery Energy Storage System Facility. A Battery Energy Storage System (BESS) Facility is an electrochemical device that charges or collects energy from the grid or a distributed generation system (e.g., power plant) and then discharges that energy at a later time to provide electricity or other grid services when needed. Small-scale battery energy storage facilities are stationary storage systems less than 5 acres that are connected to the distribution system. Large grid-scale battery energy storage facilities, comprising more than 5 acres, developed in combination with energy generation facilities such as power plants, wind farms, or solar parks are prohibited.

Adjacent and Surrounding Land Uses

The general area immediately surrounding the Project site includes commercial, manufacturing, and light industrial uses. Further west and north, there are multi-family residential uses and a senior center and park to the northwest beyond these uses. There is a railroad alignment immediately bordering the south side of the Project site, with commercial and institutional extending further south. The west site is bordered directly to the east by the SCE Cortez Substation, with commercial, manufacturing, and light industrial uses further east.

2.3 Project Characteristics

The Project is designed to charge or discharge electricity to and from the grid via battery energy storage system (BESS) with associated on-site support components consisting of battery enclosures, inverters, collector lines, fencing, access roads, supervisory control, a SCADA system, and other ancillary facilities or equipment. The Project would also include an on-site Project substation on the west site that will allow interconnection to the adjacent SCE Cortez Substation via an overhead gen-tie line.

Utilizing similar battery technology used in electric vehicles, the Project would provide additional capacity to the electrical grid to assist with serving load during periods of peak demand by charging when demand is low and discharging when demand is high. This accommodates the integration of additional intermittent renewables such as wind and solar and reduces the need to operate natural gas power plants. The Project would also serve as an additional local capacity resource that would enhance grid reliability.

The Project is expected to create approximately 40 jobs during construction, many of which can be sourced from the City and adjacent cities. The Project would be operated remotely, with weekly visits by one to two workers in a light utility truck for routine inspections. Periodic on-site maintenance, including occasional equipment replacement and electrical repairs, would be performed as needed by regional employees and contractors.

Battery Energy Storage System

The Project would include placement of battery energy storage enclosures and associated electrical equipment, including medium voltage transformers and power conversation systems. Each unit consists of a storage enclosure/non-occupiable steel cabinet that houses battery modules and power conversion system equipment. The battery storage units are prefabricated off site and would arrive to the site fully assembled and ready to be installed

and operated. The actual number of energy storage enclosures and types are approximate and subject to change based on available battery technology at the time of construction. At this time, it is assumed that there will be 94 battery energy storage enclosures. Each battery energy storage enclosure would have insulation, a module cooling system, a battery management system, fire detection equipment, power conversion system (PCS) equipment containing the electronic controls, inverters, and a medium voltage step-up transformer. The primary storage components would consist of self-contained electrochemical battery systems using conventional storage technologies with proven safety and performance records. The BESS enclosures would be designed such that the periodic maintenance and replacement of underperforming battery components can be easily performed on an as-needed basis without replacing the entire module.

Fire detection measures are incorporated in the Project design in accordance with National Fire Protection Association (NFPA) safety standards. It should be noted that selection of batteries would be based on supply chain considerations;[1] as such, the capacity and size of the containers may change, as may the ratings of the conversion equipment (inverters and transformers). The number of containers, inverters, and transformers and expected total megawatt capacity are an estimate based on currently available technology and are similar to components typically found in BESS facilities. While the battery technology may change, the overall development footprint of the Project would remain consistent. As further described herein, anticipated minor alterations to the configuration of the BESS containers and related facilities within the Project footprint would not result in significant changes to the Project design such that these alterations would impact the conclusions in this IS/MND.[2] Individual lithium-ion, or similar technology, battery cells form the core of the BESS. Cells are assembled either in series or parallel connection in sealed battery modules. The battery modules would be installed in self-supporting racks electrically connected either in a series or parallel to each other. The individual battery racks are connected in series or parallel configuration to deliver the BESS power rating. The battery racks would be fused.

The BESS facility would be unstaffed and would include remote operational control. The BESS facility would be uninhabited with no bathroom facilities, running water, or office space. Project operations would be monitored remotely through the SCADA system that would be housed in an enclosure adjacent to the Project substation. Periodic inspections and maintenance activities would occur on the Project site.

Fire Protection and Security Systems

While current BESS are designed to contain fires within a single battery module, in the unlikely event of a battery cell malfunction, a fire could occur. If a fire does occur, pollutants could be emitted into the atmosphere. Battery system fires are generally considered Class A (plastics fires, from materials such as the separator) and Class B (flammable liquids, from materials such as the electrolyte) but may also have characteristics of Class C (electrical fires). As such, the pollutants that would be generated are similar to other common residential and commercial fires. In addition, electrolyte added to the cells during manufacturing is fully absorbed into the cell material and enclosed within the cell casing, which eliminates the risk of material leaking from the cell even if water is applied for fire suppression. The Project would incorporate multiple fire detection systems onsite and within the individual BESS units. In addition to interior monitoring equipment, the Project would include surveillance cameras for security and infrared detectors for thermal deviation detection for fire safety. In addition, each BESS unit contains an onboard battery management system that monitors the appropriate state of individual battery cells and relays

1 The battery energy storage enclosures are manufactured by Tesla, Fluence, LG Chem, and a number of other manufacturers. The specific manufacturer will be selected at a future date based on supply chain considerations and available battery technology at the time of construction.

2 *Residents Against Specific Plan 380 v. County of Riverside* (2017) 9 Cal.App.5th 941.

information 24-7 to an offsite operations and maintenance facility. In the event of an anomaly, the system is designed to remove power from the affected cells. Driveways from East Edna Place connecting to the Project site, along with internal roads, would be constructed to allow fire and maintenance vehicle access. A secondary access gate would be provided on the southern boundary of each site to allow for LACoFD access only in the event of an emergency. All internal access roads within the Project site would be up to 26 feet wide and cleared, graded, and compacted.

Surveillance would be provided by a video security system capable of continuous 24-hour monitoring and recording, as approved by the City of Covina Chief of Police. Cameras would be positioned to monitor common areas, entrances and exits, and parking areas, and would capture images at a resolution sufficient for identification purposes. Wall-mounted and motion-activated lighting would be incorporated in parking lots, entryways, and pedestrian areas to enhance safety. Collectively, the Project's fire protection and security measures would minimize risks to onsite personnel and deter potential public nuisances.

Pursuant to manufacturer specifications, the BESS units would be fully certified to the most rigorous international safety standards. This includes the following select certifications:

- UL 1642 – Standard for Lithium Batteries (cell level certification).
- UL 1973 – Standard for Batteries for Use in Stationary Applications (module level certification).
- UL 9540 – Standard for Energy Storage Systems and Equipment (system level certification).
- UL 9540A – Standard for Inverters, Controllers, Converters, and Interconnection Equipment for DER.
- IEC 62619 – Standard for Battery Safety in Stationary Applications
- California Public Utilities Commission General Order 167 – Standards for the maintenance and operation of electric generating facilities and power plants.

Additionally, compliant with LACoFD requirements, compliant with LACoFD requirements, four fire command stations (FCSs) which would be installed on the perimeter concrete block wall. The FCSs would be unmanned cabinets used by LAFCoD in the event of an emergency fire event. To FCSs would be located near the entrance to the east and west sites on East Edna Place and the other two would be located near the southern access gates of both sites.

The Project will include five new fire hydrants including two at the west site and three at the east site. The fire hydrants are being included to meet LACoFD requirements. The fire hydrants will require installation of up to five new water services lines. Use of the fire hydrants would be limited to emergency events. The five fire hydrants will be constructed and maintained to LACoFD standards.

Battery Energy Storage System Enclosures and Controller

The BESS batteries, battery racks, cooling system, direct-current disconnect, and other ancillary equipment would be housed in outdoor-rated enclosures. The BESS enclosures would have a maximum height of 9 feet, 8 inches. The structures would have a heating, ventilation, and air conditioning (HVAC) system for optimal performance and safety. Power for the HVAC system, lighting, and other electrical systems would be provided through a connection to the on-site station service transformer with connection lines installed above and/or below ground.

The BESS controller would provide a system of controls for the battery modules, PCS, medium-voltage system, and up-to-the-point of connection with the electrical grid. The controllers would ensure that the BESS effectively responds to grid emergency conditions and would provide a secondary safety system designed to safely shut down the facility.

Power Conversion System

The PCS would consist of an inverter, protection equipment, direct current (DC) and alternating current (AC) circuit breakers, harmonic filters, equipment terminals, and connection cabling system. Electric energy would be transferred from the existing power grid to the Project batteries during a battery charging cycle, and from the Project batteries to the power grid during a battery discharge cycle. The PCS would convert electric energy from AC to DC when the energy is transferred from the grid to the battery, and from DC to AC when the energy is transferred from the battery to the grid. The energy conversion is enabled by bi-directional inverters that connects the DC battery system to the AC electrical grid. The PCS would also include a transformer that converts the AC side output of the inverter to medium AC voltage to increase the overall efficiency of the BESS and to protect the PCS in the event of system electrical faults.

Project Substation

The Project substation would be the termination point of the 34.5-kilovolt (kV) medium voltage collection system. The power to and from the BESS would be passed through a final interconnection step-up transformer to convert it from 34.5kV to 66kV, which is the Project's interconnection voltage at the SCE Cortez Substation. The open-air Project substation would be on the southern portion of the west site adjacent to the SCE Cortez Substation as shown in the Preliminary West Site Plan Improvements (Figure 1-2A).

Operations and Maintenance

Once constructed, the Project would operate 7 days per week, 365 days per year. The facility would be remotely monitored by the original equipment manufacturer and the Applicant. Project operations would be monitored remotely through the SCADA system. The Project would include one single story control enclosure for the SCADA system (approximately 400 to 700 square feet and a height of about 15 feet) near the Project substation.

During operation of the Project substation, operation and maintenance staff would visit the substation periodically for maintenance activities. Routine operations would require one or two workers in a light utility truck to visit the facility on a weekly basis.

Periodic augmentation of batteries within the Project site would occur to maintain the capacity over an approximate 30-year life. Occasionally, on-site maintenance would be required, which may include replacement of equipment and miscellaneous electrical repairs on an as-needed basis. No permanent sanitary facilities would be required. Maintenance trucks would be utilized to perform routine maintenance, including but not limited to equipment testing, monitoring, repair, routine procedures to ensure service continuity, and standard preventative maintenance. Typically, one major maintenance inspection would take place annually.

Generation Transmission and Collection Lines

Gen-Tie Line – West Site

The energy would be transported to and from the Project substation to the adjacent SCE Cortez Substation through a gen-tie line. The 66kV gen-tie line would be installed above ground from an approximately 50-foot point of change over (POCO) pole located within the Project substation, travel overhead approximately 90 feet into the SCE Cortez Substation, where it would connect to a 39-foot tall 66kV dead end switchyard structure, as described further below under SCE Cortez Substation Improvements. The 50-foot gen-tie POCO pole would be constructed of steel and would be at a height that is consistent with the existing equipment within the SCE Cortez Substation and the existing transmission lines along East Edna Place.

Collection Line

The Project would include a 34.5kV below-ground collection (feeder) line that would connect the east site to the west site and substation. As shown in Figure 1-1, Project Location, the collection line would extend from northeast corner of the east site, west along the south side of East Edna Place within a portion of the public right-of-way approximately 600 feet before turning south and interconnecting with the Project substation.

Perimeter Fencing, Landscaping, Signage, and Lighting

The Project site would be enclosed by a 10-foot-tall perimeter concrete block wall and include wrought iron gates to enter the site as shown in Figure 1-2A, Preliminary West Site Improvement Plan and Figure 1-2B, Preliminary East Site Improvement Plan. The primary purpose of the wall and rolling driveway gates, which would be equipped with a keypad, is to prevent unauthorized access to the site and to provide a buffer between the Project and surrounding uses. As shown in Figure 2-1, Landscaping Plan, the portions of the Project site that front East Edna Place would be landscaped.

CITY OF COVINA TREE REQUIREMENTS

CODE REQUIREMENT	SITE REQUIREMENT	PROVIDED
1 TREE FOR EACH 500 SF OF LANDSCAPE AREA	9,111 SF OF LANDSCAPE AREA/500 = 18 TREES	26 TREES
40% OF PROPOSED TREES TO BE 24" BOX SIZE	26 TREES(0.4) = 11 24" BOX TREES	19 24" BOX TREES
12.5% OF TREES TO BE 48" BOX SIZE OR 25% OF TREES TO BE 36" BOX SIZE	26 TREES(0.25) = 7 36" BOX TREES	7 36" BOX TREES
1 TREE FOR EACH 60' LF OF STREET FRONTAGE	510 LF OF STREET FRONTAGE/60 = 9 TREES	26 TREES
1 TREE FOR EACH 6,000 SF OF SITE AREA	148,430 SF OF SITE AREA/6,000 = 25 TREES	26 TREES

LANDSCAPE NOTE:

THE SELECTION OF PLANT MATERIAL IS BASED ON CLIMATIC, AESTHETIC, AND MAINTENANCE CONSIDERATIONS. ALL PLANTING AREAS SHALL BE PREPARED WITH APPROPRIATE SOIL AMENDMENTS, FERTILIZERS AND APPROPRIATE SUPPLEMENTS BASED UPON A SOILS REPORT FROM AN AGRICULTURAL SUITABILITY SOIL SAMPLE TAKEN FROM THE SITE. DECOMPOSED GRANITE SHALL FILL IN BETWEEN SHRUBS TO SHIELD THE SOIL FROM THE SUN, EVAPOTRANSPIRATION, AND RUN-OFF. ALL SHRUB BEDS SHALL BE MULCHED TO A 3" DEPTH TO HELP CONSERVE WATER, LOWER SOIL TEMPERATURE, AND REDUCE WEED GROWTH. THE SHRUBS SHALL BE ALLOWED TO GROW IN THEIR NATURAL FORMS. ALL LANDSCAPE IMPROVEMENTS SHALL FOLLOW THE GUIDELINES SET FORTH BY THE CITY OF COVINA MUNICIPAL CODE.

IRRIGATION NOTE:

AN AUTOMATIC IRRIGATION SYSTEM SHALL BE INSTALLED TO PROVIDE 100% COVERAGE FOR ALL PLANTING AREAS SHOWN ON THE PLAN. THE WATER SUPPLY FOR THIS SITE IS A POTABLE WATER CONNECTION AND A DEDICATED IRRIGATION METER AND SMART CONTROLLER WILL BE PROVIDED. LOW VOLUME DRIP EQUIPMENT SHALL PROVIDE SUFFICIENT WATER FOR PLANT GROWTH WITH NO WATER LOSS DUE TO WATER CONTROLLERS, AND OTHER NECESSARY IRRIGATION EQUIPMENT. ALL POINT SOURCE SYSTEM SHALL BE ADEQUATELY FILTERED AND REGULATED PER THE MANUFACTURER'S RECOMMENDED DESIGN PARAMETERS. ALL IRRIGATION IMPROVEMENTS SHALL FOLLOW THE GUIDELINES SET FORTH BY THE CITY OF COVINA MUNICIPAL CODE.

I HAVE COMPLIED WITH THE CRITERIA OF THE WATER EFFICIENT LANDSCAPE ORDINANCE AND APPLIED THEM FOR THE EFFICIENT USE OF WATER IN THE LANDSCAPE AND IRRIGATION DESIGN PLAN.

RANDALL A. KOPFF JR, LLA 6633

STATE OF CALIFORNIA ESTIMATED WATER USE

TOTAL WATER USE IS CALCULATED BY SUMMING THE AMOUNT OF WATER ESTIMATED FOR EACH HYDROZONE. WATER USE FOR EACH HYDROZONE IS ESTIMATED WITH THE FOLLOWING FORMULA:

EWU (HYDROZONE) = ESTIMATED WATER USE (GAL / YEAR)
ETO = REFERENCE EVAPOTRANSPIRATION (INCHES / YEAR)
PF = PLANT ETO ADJUSTMENT FACTOR
HA = HYDROZONE AREA (S.F.)
.62 = CONVERSION FACTOR
IE = IRRIGATION EFFICIENCY
SLA = SPECIAL LANDSCAPE AREA (S.F.)

EWU (HYDROZONE) = (ETO * PF * HA * .62) / (IE)

HYDROZONE A (DRIP)

ETO	PF	HA	IE	CONVERSION FACTOR	EWU GAL/YEAR
50.1	.2	7057	.81	.62	54125

HYDROZONE B (BUBBLER)

ETO	PF	HA	IE	CONVERSION FACTOR	EWU GAL/YEAR
50.1	.4	832	.75	.62	13783
ESTIMATED TOTAL WATER USE (ETWU)					67908

MAWA (MAXIMUM APPLIED WATER ALLOWANCE)

ETO	ET ADJUSTMENT FACTOR	TOTAL HA	CONVERSION FACTOR	MAWA
50.1	.45	7889	.62	110272
ESTIMATED ANNUAL WATER USE (% OF MAWA)				62

FIGURE 2-1
Landscape Plan
Covina Reliability Project

DUDEK

INTENTIONALLY LEFT BLANK

Low elevation (less than 14 feet) controlled security lighting would be installed throughout the site as necessary. Lighting installed as part of the Project would be required to incorporate light-emitting diode (LED) lighting for parking areas, entryways, and pedestrian areas, including wall-mounted motion-sensor LED lights on both the interior and exterior of the proposed concrete wall. Operational lighting would only be switched on when personnel enter the area through a manual activation (switch). All fixtures would be downward-directed and shielded to prevent light trespass and comply with applicable light-pollution standards.

Drainage Improvements

The Project proposes to match drainage patterns to those of existing conditions. The Project would redevelop the existing impervious surface lots to include pervious landscape and gravel areas, resulting in an overall increase in pervious area compared to existing conditions. Although detention is not required due to the Project's proposed increases to perviousness and improved infiltration capacity, the Project would include two bioretention basins designed to meet Low Impact Development (LID) standards and treat on-site runoff consistent with the City's MS4 permit requirements. Once operational, runoff would continue to surface flow generally south and southwest, discharging into the two respective bioretention basins for treatment and infiltration. Flows that exceed the basin capacity during large storm events would weir overflow south onto the Metrolink railroad tracks.

SCE Cortez Substation Improvements

In order to facilitate operation of the Project, SCE would make improvements to the SCE Cortez Substation to accommodate new equipment. These improvements would be made within the existing SCE substation footprint, would be within areas previously disturbed, and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. Below is a summary of improvements to the SCE Cortez Substation:

- Install facilities for a new 66kV switchrack position to terminate the Project's gen-tie line within the SCE Cortez Substation. This work includes the following:
  - One (1) 39-foot tall 66kV dead end switchyard structure
  - Two (2) 66kV voltage transformers with steel pedestal support structures
  - Three (3) 66kV line drops
  - One (1) 66kV circuit breaker
  - Three (3) 66kV group operated disconnect switches, one with grounding equipment
  - Extend bus 1 position to the west within the SCE Cortez Substation fence line
  - 200 feet of conductor from the 39-foot tall 66kV dead end structure within the SCE Cortez Substation to the Project's point of change in ownership location outside SCE Cortez Substation fence line.
- Install telecommunications facilities:
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend fiber optic cable to the communications room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend the Project's diverse telecommunications into the communication room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.

- Lightwave, channel, and associated equipment (including terminal equipment), supporting protection, remote terminal unit and SCADA requirements at the Project and SCE Cortez Substation.

2.4 Project Construction and Phasing

Project construction would include site preparation, installation of facilities, and commissioning of the BESS, followed by eventual decommissioning at the end of the Project's operational life in 2056.

Construction

Construction would be primarily composed of the following activities:

- **Demolition of Existing Facilities/Site Preparation/Grading:** The site would be prepared for construction, including the demolition of existing buildings and grading. Rough grading may be performed where required to accommodate the support structures and access roads. Access roads would be gravel or aggregate base depending on the final site geotechnical report. A temporary staging area would be constructed to hold materials and construction equipment.
- **Fencing:** A 10-foot-tall concrete perimeter wall that meets LACoFD requirements would be installed around the Project site. Interior to the site, the substation on the west site would be surrounded by an approximately 8-foot-high chain-link security fence topped with approximately 1 foot of climbing deterrent, as approved by the City. Interior fencing would not be visible outside of the Project site, since it would be blocked by the Project's concrete perimeter wall.
- **Electrical Work:** A concrete pad for the step-up transformer would be poured, followed by the installation of the medium-voltage transformers, wiring of the modules through combiner boxes, and construction of the Project substation and grid interconnection. The medium-voltage transformers would sit on concrete foundations or driven piles, pending final design.

The Project is anticipated to be built over an approximately 14-month period from the onset of site preparation activities through testing and commissioning of the facility. It is anticipated that construction crews would work 8 or 10 hours per day, with work occurring Monday through Friday. Overtime and weekend work would be used only as necessary and consistent with the City's municipal code with respect to construction activity and noise. Estimated durations of construction activities are presented in Table 1, with certain stages of work occurring concurrently.

Table 1. Estimated Construction Activity Duration and Workforce

Construction Activity	Duration*	Expected Construction Workforce (Number of Employees)
Demolition of Existing Facilities / Site Preparation	2 Months	20
Grading	1 Month	20
Battery/Container Installation	6 Months	6
SCE Substation Construction/Upgrades	12 Months	18
Collector Line Installation	5 Months	20
Substation and Gen-Tie Line Installation	3 Months	5

Table 1. Estimated Construction Activity Duration and Workforce

Construction Activity	Duration*	Expected Construction Workforce (Number of Employees)
Decommissioning (year 2056)	6 Months	20

Note: gen-tie = generation transmission.
* Some phases of construction are expected to occur concurrently during the approximately 14-month construction period.

The enclosure modules would be off-loaded and installed using cranes, boom trucks, forklifts, rubber-tired loaders, rubber-tired backhoes, and other small- to medium-sized construction equipment, as needed. Construction equipment would be delivered to the site on low-bed trucks unless the equipment can be driven to the site (e.g., boom trucks).

Decommissioning

In general, the BESS would be recycled at the expiration of the Project's life (30 years). Most parts of the proposed system are recyclable. Batteries include lithium-ion, which degrades but can be recycled or repurposed. Site structures would be constructed out of steel, or wood, and/or concrete. All of these materials could be recycled at local recyclers. Concrete from deconstruction would be recycled. Metal, and scrap equipment, and parts that do not have free-flowing oil may be sent for salvage.

Fuel, hydraulic fluids, and/or oils contained within Project components would either be transferred directly to a tanker truck and discharged in accordance with local, state, and federal regulations or the entire Project component would be hauled offsite and disposed of in accordance with local, state, and federal regulations. Other items that may be stored onsite, that are not feasible to remove at the point of generation, such as smaller container lubricants, paints, thinners, solvents, cleaners, batteries, and sealants, would be kept in a locked utility structure with integral secondary containment that meets Certified Unified Program Agencies and Resource Conservation and Recovery Act requirements for hazardous waste storage until removal for proper disposal and recycling. It is anticipated that all oils and batteries would be recycled. Site personnel involved in handling these materials would be trained to properly handle them. Containers used to store hazardous materials would be inspected regularly for any signs of failure or leakage. Additional procedures would be specified in a Hazardous Materials Business Plan closure plan submitted to the Certified Unified Program Agencies. Transportation of the removed hazardous materials would comply with regulations for transporting hazardous materials, including those set by the Department of Transportation, the U.S. Environmental Protection Agency, California Department of Toxic Substances Control, California Highway Patrol, and California State Fire Marshal.

2.5 Project Approvals

Pursuant to CEQA Guidelines Section 15050, the City is the lead agency for this Project, taking primary responsibility for conducting environmental review and approving or denying the Project. The entitlements, reviews, permits, and approvals required to implement the Project are as follows:

- Construction General Permit (Federal, Environmental Protection Agency)
- Hazardous Materials Business Plan (State, California Environmental Protection Agency)

- Southern California Regional Rail Authority (SCRRA) Encroachment Permit (State, Los Angeles County Metropolitan Transportation Agency)
- Site Plan Review (Local, City)
- Conditional Use Permit (Local, City)
- Building and Grading Permits (Local, City)
- Construction Encroachment Permits (Local, City)
- South Coast Air Quality Management District (SCAQMD) Rule 201 and 203: Permit to construct and operate (Local, SCAQMD)

3 Initial Study Checklist

1. **Project title:**

   Covina Reliability Project

2. **Lead agency name and address:**

   City of Covina
   125 East College Street
   Covina, California 91723

3. **Contact person and phone number:**

   Lisette Sanchez-Mendoza
   626.384.5451

4. **Project location:**

   The Project is located south of East Edna Place and west of Barranca Avenue on APNs 8429-008-029, 8429-008-028, 8429-007-007, 8429-007-006 and 8429-007-005 in the City of Covina.

5. **Project sponsor's name and address:**

   Kimberly Comacho
   Covina Reliability Project, LLC
   101 West Broadway, Suite 1120
   San Diego, California 92101

6. **General plan designation:**

   General Industrial (GI)

7. **Zoning:**

   Light Manufacturing (M-1).

8. **Description of project. (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary):**

   See Section 2, Project Description.

9. **Surrounding land uses and setting: Briefly describe the project's surroundings:**

   The general area immediately surrounding the Project site includes commercial, manufacturing, and light industrial uses. Further west and north, there are multi-family residential uses and a senior center and park

to the northwest beyond these uses. The Project site is surrounded by mostly industrial and commercial developments to the north and east, with recently constructed residential properties located to the north (approximately 330 feet) and west (approximately 250 feet) from the Project site. There is a railroad alignment immediately bordering the south side of the Project site, with commercial and institutional further south. The west site is bordered directly to the east by the SCE Cortez Substation, with commercial, manufacturing, and light industrial further east.

10. **Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):**

    See Section 2.5, Project Approvals.

11. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**

    See Section 3.18, Tribal Cultural Resources.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" or "Less than Significant Impact with Mitigation Incorporated," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☐ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology and Soils	☐ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
☐ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

Determination (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Project, nothing further is required.

Signature

12.22.25
Date

Evaluation of Environmental Impacts

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
    a. Earlier Analysis Used. Identify and state where they are available for review.
    b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
    c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
    a. the significance criteria or threshold, if any, used to evaluate each question; and
    b. the mitigation measure identified, if any, to reduce the impact to less than significance

3.1 Aesthetics

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS** – Except as provided in Public Resources Code Section 21099, would the project**:**				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

To aid in the analysis of potential impacts to existing views, photographs of existing conditions were taken, and visual simulations of proposed conditions were prepared from public vantage points (key observation points or KOPs) in the immediate surrounding area. The location of KOPs in relation to the Project site are shown on Figure 3.3-1, KOP Photo Key, and visual simulations of proposed development of the Project site are presented in Figures 3.3-2 through 3.3-4.

DUDEK

INTENTIONALLY LEFT BLANK

a) Would the project have a substantial adverse effect on a scenic vista?

Less than Significant Impact. There are no officially designated scenic vistas in the City (City of Covina 2000) and the Project site is not located near any designated scenic landscapes, such as a hillside or ridgeline. To the north, mountainous terrain is occasionally visible above the roofline of development; however, this is approximately 6.55 miles to the north of East Edna Place and views of this terrain are limited for passing motorists, cyclists, and pedestrians. To the south, the nearest hillsides are approximately 3 miles from the Project site and may be visible to passing motorists, cyclists, and pedestrians traveling on East Edna Place. However, as shown in Figure 3.3-4, the hillsides are partially to fully screened from view by existing development and landscaping. While the Project would introduce landscaping and a perimeter 10-foot concrete block wall, the quality of views to distant hillsides to the south would also be improved slightly as the scale/height of BESS enclosures would generally be less than the buildings that are currently on site. Furthermore, SCE improvements would be made within the existing SCE substation footprint and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. Given that partial and fleeting views to the distant hillsides from East Edna Place are not designated scenic vistas, views of these areas are not considered to be significant for purposes of this analysis. Therefore, impacts to scenic vistas would be **less than significant** and no mitigation is required.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The nearest eligible state scenic highway to the Project site is State Route 39, which is located approximately 2.3 miles to the northwest (Caltrans 2025). Given the distance and intervening development between this scenic highway and the Project site, the Project would not adversely affect any scenic resources within an officially designated state scenic highway, and there would be **no impact.**

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less than Significant Impact. The Project is within an urbanized area and, accordingly, the analysis presented below pertains to potential Project conflicts with applicable zoning and other regulations from the City of Covina governing scenic quality.

The zoning classification for the Project site is Light Manufacturing (M-1). As stated in Section 2.2, Battery Energy Storage Systems are a Conditionally Permitted Use to Section 17.54.030 (uses permitted subject to conditional use permit) of the M-1 zoning district. Furthermore, Project development would comply with the maximum building height standard of 50 feet applicable to the M-1 zone (Covina Municipal Code Section 17.54.090) as the tallest Project component (a point of change over (POCO) pole located within the Project substation) would be 50 feet tall. Also, the proposed 10-foot-tall perimeter concrete block wall, as well as the wrought iron gates to enter the site, would be in compliance with the maximum fence and wall height for development in the M-1 zone (i.e., 8 feet) as established by Covina Municipal Code Section 17.54.160. Any variations in the height of the perimeter wall, will be approved and in compliance with City's requirements.

Objective 2, General Land Use Policy 6 of the Land Use Element of the City of Covina General Plan indicates that proposed industrial or commercial development, when abutting residential properties, should incorporate buffers that adequately protect the residential properties from noise, light, trash, visual and environmental disturbances, vehicular traffic, and other factors (i.e., setback requirements and lighting restrictions). While there are no residential uses abutting the Project site (the nearest residential use is approximately 250 feet to the west), the Project includes a 10-foot concrete block wall surrounding the Project site, wrought iron gates to enter the site, and landscaping along the northern boundary of the site abutting East Edna Place, which would effectively help to buffer adjacent properties from noise, light, trash, and view of the Project.

Objective 2, Commercial and Industrial Policy 2 directs the City to preserve the predominantly low-rise, low- to medium-intensity character of Covina's commercial and industrial districts and corridors, though allow slightly higher intensities in the downtown and along various portions of major streets. As proposed and depicted in Figures 3.3-2 through 3.3-4, the primary Project components (BESS enclosures) and perimeter wall would present a generally low-rise profile and the intensity of the proposed development would be compatible with existing nearby uses. Furthermore, SCE improvements would be made within the existing SCE substation footprint and would be of a similar height and scale as existing improvements within the SCE Cortez Substation.

The Project and associated SCE improvements would adhere to all applicable zoning and regulations governing scenic quality including policies from the City's General Plan Land Use Element, setback requirements pertaining to development in the M-1 zone, and lighting restrictions. Compliance with these regulations would ensure that impacts to scenic quality would be minimized. Therefore, impacts would be **less than significant**.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less than Significant Impact. As previously noted, the Project site is in an urban environment with existing surrounding land uses, including industrial, commercial, utilities, and residential developments, that emit ambient light. The Project site includes existing commercial and industrial structures that emit light and glare. Existing light sources in the vicinity of the Project site range from everyday outdoor and indoor lighting in commercial and residential areas to utility lighting in industrial spaces. Policy 6 of the General Land Use section of the City of Covina General Plan requires that proposed industrial or commercial development, when abutting residential properties, should incorporate buffers that adequately protect the residential properties from noise, light, trash, visual and environmental disturbances, vehicular traffic, and other factors (i.e., setback requirements and lighting restrictions). While there are some residential land uses nearby, none of the properties directly about the Project site.

Construction would comply with Section 9.40.110 of the City's Municipal Code, which limits construction to daytime hours in proximity to residential uses. Therefore, nighttime construction is not anticipated, and no new sources of substantial light would be introduced during nighttime hours. Increased truck traffic due to the transport of BESS batteries and construction materials to the Project site may temporarily increase glare conditions during construction. However, this increase in glare through an increase in vehicular traffic would be minimal and temporary. Construction activity would occur on focused areas of the Project site as construction progresses, and any sources of glare would not be stationary for a prolonged period of time.

Improvements to the SCE Cortez substation would be made within the existing SCE substation footprint, would be within areas previously disturbed, and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. Therefore, construction of the Project and associated SCE improvements would not create a new source of substantial light or glare that would affect daytime views in the area. Impacts would be less than significant during the construction period.

Low-elevation (less than 14 feet) controlled security lighting would be installed throughout the Project site, as necessary. The concrete wall would have internal and external motion sensor lighting. Lighting would be located in areas where it is required for safety, security, or operations. Also, lighting would be directed on site and include shielding, as necessary, to minimize illumination of the night sky or potential light trespass onto adjacent properties. Regarding glare, the BESS containers would be painted a matte color and provided shielding on light sources would reduce potential for Project components to generate glare during operations. Therefore, the Project is not anticipated to create a new source of substantial light or glare that would adversely affect day or nighttime views in the area. Due to the existing urban nature of the environment, limited number of lights to be installed on the Project site, and proposed light and glare controls (i.e., lighting shields and use of matte finished paints) to be utilized, the Project would have a **less than significant impact** on light or glare that would adversely affect day or nighttime views in the area.

3.2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. According to the California Department of Conservation (CDOC), the Project site and associated SCE improvement areas are located on "Urban and Built-Up Land" and do not contain Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) (CDOC 2022). As such, the Project and associated SCE improvements would not result in the conversion of Farmland to non-agricultural use, and there would be **no impact**.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The Project site is within the City's Light Manufacturing (M-1) zone. As such, the site and associated SCE improvement areas are not zoned for agricultural use. Additionally, the site, including the SCE Cortez Substation, are not under a Williamson Act contract and are not a suitable site for agricultural preservation. As such, the Project and associated SCE improvements would not conflict with existing zoning for agricultural use or a Williamson Act contract, and there would be **no impact.**

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No Impact. The Project site does not contain forest land or timberland, nor is forest land or timberland present in the vicinity of the Project site. Additionally, the site is within the City's Light Manufacturing (M-1) zone. As such, the Project and associated SCE improvements would not conflict with zoning for forest land or timberland and **no impact** would occur.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. As described in Section 3.2(c), the Project site does not contain forest land, and, therefore, would not result in the loss or conversion of forest land, and **no impact** would occur.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. As described in Section 3.2(a) through (d), the Project site does not contain agricultural or forest land and would not convert agricultural or forest uses, and **no impact** would occur.

3.3 Air Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐		☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

The analysis of the Project's impact on air quality is informed by the Air Quality Technical Memorandum (Appendix A-1) and the Health Risk Assessment (Appendix A-3) prepared in November 2025 by Dudek.

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less than Significant Impact. The Project site is located within the South Coast Air Basin (SCAB), which includes the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties and all of Orange County, and is within the jurisdictional boundaries of SCAQMD.

SCAQMD administers SCAB's Air Quality Management Plan (AQMP), which is a comprehensive document outlining an air pollution control program for attaining all California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). The most recent adopted AQMP for the SCAB is the

2022 AQMP (SCAQMD 2022), which was adopted by SCAQMD's Governing Board on December 2, 2022. The 2022 AQMP focuses on available, proven, and cost-effective alternatives to traditional strategies while seeking to achieve multiple goals in partnership with other entities seeking to promote reductions in toxic risk, as well as efficiencies in energy use, transportation, and goods movement (SCAQMD 2022).

The purpose of a consistency finding with regard to the AQMP is to determine if a project is consistent with the assumptions and objectives of the regional air quality plans, and if it would interfere with the region's ability to comply with federal and state air quality standards. SCAQMD has established criteria for determining consistency with the currently applicable AQMP in Chapter 12, Sections 12.2 and 12.3 of the SCAQMD CEQA Air Quality Handbook. These criteria are (SCAQMD 1993):

- Whether the Project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.
- Whether the Project would exceed the assumptions in the AQMP or increments based on the year of Project buildout and phase.

To address the first criterion, Project-generated criteria air pollutant emissions have been estimated and analyzed for significance and are addressed under Section 3.3. Detailed results of this analysis are included in Attachment A, CalEEMod Emissions Outputs. As presented in Section 3.3, construction and operation of the Project would not generate criteria air pollutant emissions that exceed SCAQMD's thresholds.

The second criterion regarding the Project's potential to exceed the assumptions in the AQMP or increments based on the year of Project buildout and phase is primarily assessed by determining consistency between the Project's land use designations and its potential to generate population growth. In general, projects are considered consistent with, and not in conflict with or obstructing implementation of, the AQMP if the growth in socioeconomic factors is consistent with the underlying regional plans used to develop the AQMP (per Consistency Criterion No. 2 of the SCAQMD CEQA Air Quality Handbook). SCAQMD primarily uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, employment by industry) developed by the Southern California Association of Governments (SCAG) for its Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (SCAG 2020). This document, which is based on general plans for cities and counties in the SCAB, is used by SCAQMD to develop the AQMP emissions inventory (SCAQMD 2022).[3] The SCAG 2020 RTP/SCS and the associated Regional Growth Forecast are generally consistent with the local plans; therefore, the 2022 AQMP is generally consistent with local government plans.

The Project site is located in the City of Covina on private lands within the General Industrial (GI) General Plan land use designation. The City's General Plan Land Use section describes GI land use as "permit light

[3] Information necessary to produce the emissions inventory for the SCAB is obtained from SCAQMD and other governmental agencies, including the California Air Resources Board (CARB), California Department of Transportation (Caltrans), and SCAG. Each of these agencies is responsible for collecting data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profile, and emissions) and developing methodologies (e.g., model and demographic forecast improvements) required to generate a comprehensive emissions inventory. SCAG incorporates these data into its Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. Although the more recent SCAG 2024 RTP/SCS was approved in April 2024, consistency with the 2020 RTP/SCS is considered in this impact determination since SCAG's socioeconomic and transportation activities projections in their 2020 RTP/SCS are integrated in the 2022 AQMP (SCAQMD 2022).

manufacturing, processing, assembly, warehousing, and related activities plus ancillary administrative offices." The zoning designation for the Project site is Light Manufacturing (M-1). As stated in Section 2.2, Battery Energy Storage Systems are a Conditionally Permitted Use to Section 17.54.030 (uses permitted subject to conditional use permit) of the M-1 zoning district. The Project and associated SCE improvements do not propose a change in land use designation (e.g., through an amendment to the property's zoning from one zone to another). The implementation of the Project, and associated SCE improvements, would not generate an increase in growth demographics (employment, housing, or population) that would conflict with existing projections within the region. Accordingly, the Project and associated SCE improvements are consistent with the SCAG 2020 RTP/SCS forecasts used in the SCAQMD AQMP development.

In summary, based on the considerations presented for the two criteria, impacts relating to the Project's (including associated SCE improvements) potential to conflict with or obstruct implementation of the applicable AQMP would be **less than significant**.

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less than Significant Impact. Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and SCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, Project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

Construction Emissions

Proposed construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment and soil disturbance) and off site sources (i.e., on-road vendor trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity; the specific type of operation; and, for particulate matter, the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated.

The California Emissions Estimator Model (CalEEMod) Version 2022.1.1.29 was used to estimate emissions from construction of the Project and associated SCE improvements. Internal combustion engines used by construction equipment, trucks, and worker vehicles would result in emissions of volatile organic compounds (VOCs), oxides of nitrogen (NO_x), carbon monoxide (CO), coarse particulate matter (PM_{10}), and find particulate matter ($PM_{2.5}$). PM_{10} and $PM_{2.5}$ emissions would also be generated by entrained dust, which results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil. The Project would be required to comply with SCAQMD Rule 403 to control dust emissions generated during any dust-generating activities. Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active dust areas twice per day, with additional watering depending on weather conditions. The CalEEMod default assumptions were used for estimating fugitive dust emissions from grading on site. Table 3.3-1 presents the estimated maximum daily construction emissions generated during construction of the Project and associated SCE improvements. Details of the emission calculations are provided in Attachment A.

Table 3.3-1. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

Year	VOC	NOx	CO	SOx	PM_{10}	$PM_{2.5}$
	pounds per day					
Summer						
2026	1.82	18.92	46.32	0.09	2.68	0.94
2050[1]	0.18	1.28	8.26	0.02	0.79	0.22
Winter						
2025	1.09	8.47	10.93	0.02	1.02	0.46
2026	1.51	15.92	35.61	0.07	2.72	0.80

Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SCAQMD = South Coast Air Quality Management District.
[1] 2050 represents the decommissioning phase of the Project.
Emissions include compliance with SCAQMD Rules 403 and 1113.
See Attachment A for complete results.

As shown in Table 3.3-1, Project construction and associated SCE improvements would not exceed SCAQMD's daily thresholds. Therefore, construction impacts associated with criteria air pollutant emissions would be less than significant.

Operational Emissions

Emissions from the operational phase of the Project and associated SCE improvements were estimated using CalEEMod for area, mobile, offroad, and stationary sources. Operational year 2027 was assumed as it would be the first year following completion of construction. Table 3.3-2 presents the emissions during operation for the existing site and the Project.

Table 3.3-2. Estimated Maximum Daily Operation Criteria Air Pollutant Emissions

See Attachment A for complete results. Columns may not add due to rounding. <0.01 = less than 0.005

As shown in Table 3.3-2, the net Project and associated SCE improvement emissions would not exceed SCAQMD's significance thresholds during operations. Therefore, operational impacts associated with criteria air pollutant emissions would be less than significant.

Cumulative Impacts

In considering cumulative impacts from the Project, the analysis must specifically evaluate a project's contribution to the cumulative increase in pollutants for which the SCAB is designated as nonattainment for the CAAQS and NAAQS. If a project's emissions exceed SCAQMD's significance thresholds, it would be considered to have a cumulatively considerable contribution to nonattainment status in the SCAB. If a project does not exceed thresholds and is determined to have less than significant Project-specific impacts, it may still contribute to a significant cumulative impact on air quality. The basis for analyzing the Project's cumulatively considerable contribution is if the Project's contribution accounts for a considerable proportion of the cumulative total emissions (i.e., it represents a "cumulatively considerable contribution" to the cumulative air quality impact) and consistency with SCAQMD's 2022 AQMP, which addresses cumulative emissions in the SCAB.

The SCAQMD's guidance on addressing cumulative impacts for air quality is as follows: "As Lead Agency, the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all

environmental topics analyzed in an Environmental Assessment or EIR." "Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."[4]

The SCAB has been designated as a federal nonattainment area for ozone (O_3) and $PM_{2.5}$ and a state nonattainment area for O_3, PM_{10}, and $PM_{2.5}$. The nonattainment status is the result of cumulative emissions from various sources of air pollutants and their precursors within the SCAB, including motor vehicles, off-road equipment, and commercial and industrial facilities. Construction of the Project (including associated SCE improvements) would generate VOC and NO_x emissions (which are precursors to O_3) and emissions of PM_{10} and $PM_{2.5}$. As indicated in Tables 3.3-1 and 3.3-2 above, Project-generated construction and operational emissions would not exceed SCAQMD's emission-based significance thresholds for VOC, NO_x, CO, SO_2, PM_{10}, or $PM_{2.5}$.

Cumulative construction impacts would potentially occur if a construction project were to occur concurrently with another off-site project. Construction schedules for potential future projects near the Project site are currently unknown; therefore, potential construction impacts associated with two or more simultaneous projects would be speculative.[5] However, future projects would be subject to CEQA and would require an air quality analysis and, where necessary, mitigation if the Project would exceed SCAQMD's significance thresholds. Criteria air pollutant emissions associated with construction activity of future projects would be reduced through implementation of control measures required by SCAQMD. Cumulative PM_{10} and $PM_{2.5}$ emissions would be reduced because all future projects would be subject to SCAQMD Rule 403 (Fugitive Dust), which sets forth general and specific requirements for all construction sites in the SCAQMD.

Since criteria pollutant mass emissions impacts shown in Tables 3.3-1 and 3.3-2 would not be expected to exceed any of the air quality significance thresholds, cumulative air quality impacts would also be expected to be less than significant. SCAQMD cumulative air quality significance thresholds are the same as project-specific air quality significance thresholds. Therefore, potential adverse impacts from implementing the Project would not be "cumulatively considerable" as defined by CEQA Guidelines Section 15064(h)(1) for air quality impacts. Per CEQA Guidelines Section 15064(h)(4), the mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the Project's incremental effects are cumulatively considerable.

Based on the previous considerations, the Project and associated SCE improvements would not result in a cumulatively considerable increase in emissions of nonattainment pollutants, and cumulative impacts would be **less than significant**.

4 South Coast AQMD Cumulative Impacts Working Group White Paper on Potential Control Strategies to Address Cumulative Impacts From Air Pollution, August 2003, Appendix D, Cumulative Impact Analysis Requirements Pursuant to CEQA, at D-3. http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulativeimpacts-white-paper-appendix.pdf.

5 The CEQA Guidelines state that if a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact (14 CCR 15145). This discussion is nonetheless provided in an effort to show good-faith analysis and to comply with CEQA's information disclosure requirements.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less than Significant Impact.

Localized Significance Thresholds

Construction and operational activities associated with the Project and associated SCE improvements would result in sources of on-site fugitive dust and equipment emissions. The maximum allowable daily emissions that would satisfy the SCAQMD localized significance criteria for source-receptor area (SRA) 9 are presented in Table 3.3-3 and compared to the maximum daily on-site construction and operational emissions.

Table 3.3-3. Localized Significance Thresholds Analysis for the Project

Pollutant	Project Emissions (Pounds per Day)	LST Criteria (Pounds per Day)	Exceeds LST?
Construction			
NO_2	14.82	89	No
CO	38.40	623	No
PM_{10}	1.24	34	No
$PM_{2.5}$	0.31	9	No
Operation			
NO_2	3.83	89	No
CO	7.91	623	No
PM_{10}	0.21	9	No
$PM_{2.5}$	0.16	3	No

Source: SCAQMD 2009.
Notes: LST = localized significance threshold; NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter.
See Appendix A-1 for detailed results.
LSTs are shown for 1-acre project sites corresponding to a distance to a sensitive receptor of 25 meters (82 feet) (for NO_2 and CO) and 100 meters (for PM_{10} and $PM_{2.5}$) for SRA 9 (East San Gabriel Valley).
These estimates reflect control of fugitive dust required by SCAQMD Rule 403.
The emissions represent worst-case operating scenario during construction.

As shown in Table 3.3-3, the Project emissions, including associated SCE improvements, would not exceed the established LST thresholds, and thus, would result in a less than significant localized impact to sensitive receptors during construction and operation.

CO Hotspots

Traffic-congested roadways and intersections have the potential to generate localized high levels of CO. Localized areas where ambient concentrations exceed federal and/or state standards for CO are termed CO "hotspots." CO transport is extremely limited and disperses rapidly with distance from the source. Under certain extreme meteorological conditions, however, CO concentrations near a congested roadway or intersection may reach unhealthy levels affecting sensitive receptors. Typically, high CO concentrations are associated with severely congested intersections operating at an unacceptable level of service (LOS) (LOS E or worse is unacceptable). Projects contributing to adverse traffic impacts may result in the formation of

a CO hotspot. Additional analysis of CO hotspot impacts would be conducted if a project would result in a significant impact or contribute to an adverse traffic impact at a signalized intersection that would potentially subject sensitive receptors to CO hotspots.

Title 40 of the Code of Federal Regulations, Section 93.123(c)(5), Procedures for Determining Localized CO, PM_{10}, and $PM_{2.5}$ Concentrations (Hot-Spot Analysis), states that "CO, PM_{10}, and $PM_{2.5}$ hot-spot analyses are not required to consider construction-related activities, which cause temporary increases in emissions. Each site which is affected by construction-related activities shall be considered separately, using established 'Guideline' methods. Temporary increases are defined as those which occur only during the construction phase and last 5 years or less at any individual site" (40 CFR 93.123). While Project construction would involve on-road vehicle trips from trucks and workers during construction, construction activities would last approximately 14 months and would not require a Project-level construction hotspot analysis. With respect to Project operation, the Project would be unmanned and would require only infrequent maintenance vehicle trips.

In addition, at the time that the SCAQMD Handbook (1993) was published, the SCAB was designated nonattainment under the CAAQS and NAAQS for CO. In 2007, the SCAQMD was designated in attainment for CO under both the CAAQS and NAAQS as a result of the steady decline in CO concentrations in the SCAB due to turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities. The SCAQMD conducted CO modeling for the 2003 AQMP6 (SCAQMD 2003) for the four worst-case intersections in the SCAB: (1) Wilshire Boulevard and Veteran Avenue, (2) Sunset Boulevard and Highland Avenue, (3) La Cienega Boulevard and Century Boulevard, and (4) Long Beach Boulevard and Imperial Highway. At the time the 2003 AQMP was prepared, the intersection of Wilshire Boulevard and Veteran Avenue was the most congested intersection in Los Angeles County, with an average daily traffic volume of about 100,000 vehicles per day. The 2003 AQMP also projected 8-hour CO concentrations at these four intersections for 1997 and from 2002 through 2005. From years 2002 through 2005, the maximum 8-hour CO concentration was 3.8 ppm at the Sunset Boulevard and Highland Avenue intersection in 2002; the maximum 8-hour CO concentration was 3.4 ppm at the Wilshire Boulevard and Veteran Avenue in 2002.

Accordingly, CO concentrations at congested intersections would not exceed the 1-hour or 8-hour CO CAAQS unless projected daily traffic would be at least over 100,000 vehicles per day. The Project was assumed to require up to 4 employees visiting the site for maintenance twice per month. Because the Project is not anticipated to increase daily traffic volumes at any study intersection to more than 100,000 vehicles per day, a CO hotspot is not anticipated to occur. Furthermore, the Project site includes existing active commercial, manufacturing, and light industrial uses that would be demolished as part of the Project that generates 148 trips per day. The Project would result in a reduction of 144 trips per day and as such would reduce vehicle traffic compared to the existing baseline conditions.

Based on these considerations, the Project and associated SCE improvements would not generate traffic that would contribute to potential adverse traffic impacts that may result in the formation of CO hotspots. This conclusion is supported by the analysis in the Transportation Assessment in this document, which demonstrates that traffic impacts would be less than significant. In addition, due to continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO

[6] SCAQMD's CO hotspot modeling guidance has not changed since 2003.

hotspots in the SCAB is steadily decreasing. Based on these considerations, the Project and associated SCE improvements would result in a less than significant impact to air quality with regard to potential CO hotspots.

Toxic Air Contaminants

Sensitive receptors are those individuals more susceptible to the effects of air pollution than the population at large. People most likely to be affected by air pollution include children, the elderly, and people with cardiovascular and chronic respiratory diseases. According to SCAQMD, sensitive receptors include residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes (SCAQMD 1993). The nearest sensitive-receptor land uses are residences approximately 250 feet west of the Project site.[7]

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute (immediate) and/or chronic (cumulative) non-cancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

TACs are identified by federal and state agencies based on a review of available scientific evidence. In the state of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics “Hot Spots” Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources, such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources, such as automobiles; and area sources, such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., -cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

Project construction, including associated SCE improvements, would result in emissions of diesel particulate from heavy construction equipment and trucks accessing the site. Project operation would result in emissions of diesel particulate matter from maintenance and testing of the emergency generator. Diesel particulate is characterized as a TAC by the State of California.

In the unlikely event of a thermal runaway event, potential short-term emissions could include hydrocarbons, carbon monoxide, carbon dioxide, hydrogen, heptane, benzene, toluene, diethyl carbonate, dimethyl carbonate, and ethyl methyl carbonate. In third-party UL 9540A destructive testing, an intentional thermal runaway event found that visible flames outside of a battery cabinet would be unlikely, and any flaming would be unlikely to be sustained. The Hazard Mitigation Analysis (HMA) (Appendix A-2) for the Project determined

[7] The SCAQMD definition of sensitive receptors for the purposes of the toxic air contaminant exposure differs from that of the SCAQMD LST receptor definition. As such, the receptors for each analysis are different.

that toxic and highly toxic gases released during potential fires will not reach concentrations in excess of the immediately dangerous to life or health levels and flammable gases released from ESS during fire, overcharging, and other abnormal conditions will be controlled through the use of ventilation of the gases, preventing accumulation, or by deflagration venting (Appendix A-2). Any event would be short-term in nature and emissions would cease once the fire is extinguished. Furthermore, the BESS is designed with a thermal management system, electrical fault protection devices, explosion control systems, and fire detection and suppression systems to prevent a thermal runaway event. Therefore, in the event of a battery fire impacts to sensitive receptors would be considered less than significant.

The Office of Environmental Health Hazard Assessment has identified carcinogenic and chronic noncarcinogenic effects from long-term exposure, but has not identified health effects due to short-term exposure to diesel exhaust. According to the Office of Environmental Health Hazard Assessment, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should be limited to the period/duration of activities associated with the Project (OEHHA 2015). Thus, the duration of the proposed construction activities, including associated SCE improvements, would only constitute a small percentage of the total 30-year exposure period. In an abundance of caution, a health risk assessment was prepared to evaluate potential impacts to proximate sensitive and worker receptors from construction of the Project. Operation of the emergency generator and offroad equipment was also evaluated for 30 years of operation. The complete methodology is found within the health risk assessment modeling analysis for the Project (Appendix A-3). The results of the combined construction and operational health risk assessment are shown in Tables 3.3-4 and 3.3-5.

Table 3.3-4. Summary of Cancer Health Risk Results

Receptor Type	UTME (m)	UTMN (m)	Cancer Risk (in a million)	Significance Threshold (in a million)
MEIR	418671.75	3772791.75	7.5	≥10
MEIW	418892	3772764.65	1.7	≥10
Sensitive Receptor*	420522.56	3773306.25	0.6	≥10

Source: Appendix A-3.
Notes: UTME = Universal Transverse Mercator East; m = meters; UTMN = Universal Transverse Mercator North; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker.
* The sensitive receptor with the highest health risk is Charter Oak High School due to the dispersion characteristics, terrain, and meteorology

Table 3.3-5. Summary of Chronic Non-Cancer Health Risk Results

Receptor Type	UTME (m)	UTMN (m)	Chronic HI	Health Endpoint(s)	Significance Threshold (HI)
MEIR	418671.75	3772791.75	0.01	respiratory	>1
MEIW	418892	3772764.65	0.1	respiratory	>1
Sensitive Receptor*	420522.56	3773306.25	0.001	respiratory	>1

Source: Appendix A-3.
Notes: PMI = point of maximum impact; UTME = Universal Transverse Mercator East; m = meters; UTMN = Universal Transverse Mercator North; HI = hazard index; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker.
* The sensitive receptor with the highest health risk is Charter Oak High School due to the dispersion characteristics, terrain, and meteorology

As shown in Tables 3.3-4 and 3.3-5, the Project and associated SCE improvements would not result in cancer and chronic impacts that would exceed the SCAQMD significance thresholds during construction and operation. Impacts would be less than significant.

Health Impacts of Criteria Air Pollutants

Construction of the Project and associated SCE improvements would generate criteria air pollutant emissions; however, the Project would not exceed the SCAQMD mass-emission thresholds.

The SCAB is designated as nonattainment for O_3 for the NAAQS and CAAQS. Thus, existing O_3 levels in the SCAB are at unhealthy levels during certain periods. The health effects associated with O_3 generally relate to reduced lung function. Because the Project would not involve construction activities that would result in O_3 precursor emissions (VOC or NO_x) that would exceed the SCAQMD thresholds, the Project is not anticipated to substantially contribute to regional O_3 concentrations and associated health impacts. Similar to construction, no SCAQMD threshold would be exceeded during operation.

In addition to O_3, NO_x emissions contribute to potential exceedances of the NAAQS and CAAQS for NO_2 (since NO_2 is a constituent of NO_x). Exposure to NO_2 can cause lung irritation, bronchitis, and pneumonia, and lower resistance to respiratory infections. As depicted in Table 3.3-3, Project construction and associated SCE improvements would not exceed the SCAQMD localized thresholds for NO_2. Thus, construction of the Project is not expected to exceed the NO_2 standards or contribute to associated health effects. During Project operation, there would be minimal emissions of NO_2 when employees visit the site for periodic maintenance. As shown in Table 3.3-5 Project operational NO_x emissions would be well below SCAQMD thresholds. Therefore, operation of the Project and associated SCE improvements is not expected to exceed the NO_2 standards or contribute to associated health effects.

CO tends to be a localized impact associated with congested intersections. CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. CO hotspots were discussed previously as a less than significant impact. Thus, the Project's CO emissions and associated SCE improvements would not contribute to the health effects associated with this pollutant.

The SCAB is designated as nonattainment for PM_{10} under the CAAQS and nonattainment for $PM_{2.5}$ under the NAAQS and CAAQS. Particulate matter contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems, including premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing (USEPA 2016). As with O_3 and NO_x, the Project would not generate emissions of PM_{10} or $PM_{2.5}$ that would exceed SCAQMD's LSTs. Accordingly, the Project's PM_{10} and $PM_{2.5}$ emissions and associated SCE improvements are not expected to cause any increase in related regional health effects for these pollutants.

In summary, as shown in Table 3.3-3, the Project and associated SCE improvements would not result in any potentially significant contribution to local or regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants. Impacts would be **less than significant**.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than Significant Impact. The occurrence and severity of potential odor impacts depends on numerous factors. The nature, frequency, and intensity of the source; the wind speeds and direction; and the sensitivity of receiving location each contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying and cause distress among the public and generate citizen complaints.

Odors would be potentially generated from vehicles and equipment exhaust emissions during construction of the Project and associated SCE improvements. Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and asphalt pavement application. Such odors would disperse rapidly from the Project site and generally occur at magnitudes that would not affect substantial numbers of people. Therefore, impacts associated with odors during construction would be less than significant.

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities (SCAQMD 1993). The Project and associated SCE improvements would not create any new sources of odor during operation. Therefore, Project operations would result in an odor impact that is **less than significant**.

3.4 Biological Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

The analysis of the Project's impact on biological resources is based on information contained in the Biological Technical Study Memorandum prepared in August 2025 by Dudek and provided in Appendix B.

a) ***Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?***

No Impact. Dudek conducted a literature and records search for information on special-status species occurrences within the study area (see Appendix B Biological Technical Study Memorandum). Based on a review of the California Natural Diversity Database (CNDDB), and federally designated critical habitat from the United States Fish and Wildlife Service (USFWS), there are 14 special status wildlife species and 11 special status plant species within a 5-mile radius of the Project. No critical habitat is designated within the Project boundary and adjacent SCE Cortez Substation (Appendix B). No vegetation communities are mapped within the Project site (CALFIRE 2015).

While some special status species are known to occur within 5 miles of the Project area and the surrounding region, the Project location is a developed industrial site surrounded by other industrial and commercial urban developments. It is unlikely that suitable habitat exists onsite to support listed species. Furthermore, there are no mapped jurisdictional waters within the Project site. As such, no special status species are expected to occur on the Project site or in the immediate vicinity of the Project site (including the SCE Cortez Substation), due to the absence of suitable habitat. Therefore, **no impact** to special-status species is expected to occur.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. The Project and SCE Cortez Substation are within a highly urbanized area where all natural vegetation communities, soils, and hydrology have been removed or substantially altered. No vegetation communities are mapped within the Project site (CALFIRE 2015). Suitable habitat is not present for special-status or listed species at the Project site due to the developed nature of the Project site and surrounding area. The nearest potential riparian area is a fragmented, disturbed concrete drainage channel located at Kahler Russell Park, approximately 0.5 miles east of the Project site. The Project site is separated from this drainage by urban development, including the Metrolink railway tracks, industrial and residential structures. Due to the distance and intervening development, the Project and associated SCE improvements would not adversely affect this drainage. No critical habitat is designated within the Project boundary (USFWS 2025a). Therefore, the Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community, and there would be **no impact.**

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. Based on a review of the USFWS National Wetlands Inventory, there are no wetland features located within the Project site (USFWS 2025b). Furthermore, there are no mapped jurisdictional waters within the Project site. Therefore, the Project and associated SCE improvements would not have a substantial adverse effect on state or federally protected wetlands, and there would be **no impact.**

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact. There are no wetlands or water bodies within the Project site. As such, the Project and associated SCE improvements would have no potential to affect the movement of migratory fish. The Project site is fully developed with no vegetation and, therefore, does not provide suitable nesting habitat for migratory bird species. However, there could be potential for migratory birds in adjacent areas, which are protected under Sections 3503, 3503.5, and 3513 of the Fish and Game Code and under the Migratory Bird Treaty Act, and standard protections for nesting bird species would need to be incorporated into the Project (USFWS 2025a).

Construction activities would also elevate noise levels and could cause disturbance to protected bird species nesting in adjacent areas. Should construction of the Project occur during breeding, reproduction, or juvenile nesting periods for nesting birds and raptors (i.e., between February 15 and August 31), the construction activities associated with the Project would have the potential to disturb nesting birds or raptor species in adjacent areas, which could be a potential impact under CEQA. However, the Project would be required to comply with the Migratory Bird Treaty Act (MBTA), which includes standard protections for nesting bird species. Compliance with the MBTA would ensure that potential impacts to nesting birds would be minimized and, therefore, construction impacts would be **less than significant.**

Once operational, the Project would include low-elevation (less than 14 feet) controlled security lighting that would only be switched on when personnel enter the area through manual activation (switch); would only be located in areas where it is required for safety, security, or operations; and would be directed on site and include shielding, as necessary, to minimize potential impacts to surrounding viewers. Additional sources of light have the potential to affect wildlife movement and behavior, particularly when introduced to an environment that is otherwise devoid of artificial lighting sources. However, the Project would be surrounded by urban development that contains many sources of light, including industrial uses, commercial uses, and traffic. Associated SCE improvements would be made within the existing SCE Cortez Substation footprint, would be within areas previously disturbed, and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. As such, the Project and associated SCE improvements would not substantially increase the ambient light in the Project area when compared to existing conditions to the extent that wildlife movement or behavior would be adversely affected. Therefore, the light emitted from the Project would not result in a substantial adverse impact to nesting birds. The Project site frontage along East Edna Place would be landscaped (Figure 2-1). As such, the Project would provide potential nesting sites in an urban environment. Therefore, operational impacts would be **less than significant.**

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. The Project and associated SCE improvements do not propose removal and/or trimming of street trees or heritage trees, as defined by the City's Municipal Code. As such, the Project would not conflict with any local policies or ordinances protecting biological resources. There would be **no impact.**

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The City's General Plan does not designate any areas of the city as being located within a habitat conservation plan (City of Covina 2000). Additionally, the city is not located within any regional conservation plans designated by the state (CDFW 2019). Therefore, implementation of the Project and associated SCE improvements would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. There would be **no impact.**

3.5 Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☒	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☒	☐	☐

The analysis of the Project's impact on cultural resources is primarily based on information contained in the Built Environment Inventory and Evaluation Report (Appendix C-1) prepared in August 2025 by Dudek and the Cultural Resources Inventory and Evaluation Report (Appendix C-2) prepared in August 2025 by Dudek.

a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

No Impact. As mentioned above, a Built Environment Inventory and Evaluation Report and a Cultural Resources Inventory and Evaluation Report were prepared for the Project and are provided in Appendix C-1 and Appendix C-2, respectively. These efforts included a California Historical Resources Information System (CHRIS) records search, an archival information and literature review, correspondence with the Native American Heritage Commission and interested parties, pedestrian surveys, and an updated California Department of Parks and Recreation 523 Series form for previously recorded cultural resource, Mojave Road (P-19-187085), and evaluations of significance for resources identified that were 45 years of age or older within the Project site.

Built Environment Resources

As described in Appendix C-1, Dudek identified three historic-era properties within the Project's Area of Potential Impact (API), two industrial buildings and the SCE Cortez Substation. None were found eligible for listing in the National Register of Historic Places (NRHP), CRHR, or the City of Covina Historic Resources Inventory. As a result, each property was assigned a California Historical Resource Status Code of 6Z, indicating they are ineligible for listing at the federal, state, or local level through survey evaluation.

The two industrial buildings are not directly associated with significant events or trends in history. These buildings were constructed during a period of industrial growth in Covina, The properties are only generally associated with Covina's industrial development during 1950s and 1960s. However, a mere association with this trend is not sufficient to make the properties eligible for the NRHP, CRHR or the city's inventory for historical association. The buildings are also not associated with persons who made significant contributions to history. The earliest identified owners of the subject properties were Louis Frye from 1958 to 1959 and Edwin Begin from 1959 to 1960. The buildings were subsequently occupied by short-term owners/occupants until c. 2023 when the current owner took over ownership. The buildings on-site are modest and architecturally undistinguished examples of industrial buildings constructed in 1959 and 1960 with no particular style. The buildings are not the work of a notable architect or builder, and archival research failed to reveal substantial information about the contractors of the properties. Likewise, the

buildings appear to have been constructed through already well-documented and common construction techniques and methods and do not possess high artistic values by articulating a particular concept of design to the extent that they express an aesthetic ideal. The subject properties do not contribute to the significance of a potential or existing historic district. The buildings are not significant as a source, or likely source, of important historical information, nor do they appear likely to yield important information about historic construction methods, materials, or technologies.

The SCE Cortez Substation was constructed c. 1964 to provide electrical service during a period of increased development in Covina. It represents a continuation of a decades-long pattern of SCE's electrical infrastructure expansion in the region that accelerated to accommodate post-World War II residential, commercial, and industrial growth. Although serving an important function, the substation is one of many substations developed in the 1950s and 1960s and its specific association is not considered an important. The SCE Cortez Substation is not directly associated with individuals who made significant contributions to history. Similarly, the SCE Cortez Substation and associated structures are utilitarian in design and lack the distinctive characteristics of a particular type, period, or method of construction. The SCE Cortez Substation does not contribute to the significance of a potential or existing historic district. The SCE Cortez Substation is not significant as a source, or likely source, of important historical information, nor does it appear likely to yield important information about historic construction methods, materials, or technologies. This technology is well understood through contemporary trade journals and scientific monographs.

No historical resources, as defined by CEQA Guidelines Section 15064.5, are present within the Project site or the SCE Cortez Substation. Therefore, implementation of the Project and associated SCE improvements would not result in a substantial adverse change in the significance of a historical resource, and the impact would be **no impact**.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Less Than Significant Impact with Mitigation Incorporated. The Project site, including the SCE Cortez Substation, have been disturbed by past development as the result of previous construction activities. The CHRIS records search conducted at the South Central Coastal Information Center (SCCIC) at Cal State University, Fullerton (CSU Fullerton) indicated that the Project site, including the SCE Cortez Substation, have not been subject to any previous archaeological investigations that would have included a records search or pedestrian survey prior to development. The records search also indicated four previously recorded cultural resources are located within one mile of the Project site. One of the identified cultural resources, P-19-187085, a historic-era route, overlaps the eastern site. Although a segment of the historic-era route is currently mapped within the Project site, the resource could not be located during the pedestrian survey as the parcels are entirely paved over. Review of the 1938 Kirkman-Harriman Historical Map suggests it is possible P-19-187085, the Mojave Road, could be located further to the north. Because the resource could not be located in the Project site there is no potential for adverse effects to P-19-187085. Records search results and historic uses indicate the site's archaeological resources sensitivity is low. Additionally, as described in Appendix C-2, no archeological resources were observed during the pedestrian survey of the Project site. Although the potential exists for the inadvertent discovery of archaeological resources during ground disturbing activities, the absence of known resources combined with the previously disturbed nature of the Project site makes the likelihood of encountering previously undiscovered, intact archaeological deposits low. However, in the event that archaeological resources are

exposed during construction activities involving ground disturbance, the Project would have the potential to negatively affect archeological resources, which would be a significant impact under CEQA. Implementation of **MM-CUL-1** and **MM-CUL-2** would reduce this impact to below a level of significance. Therefore, impacts to archeological resources would be **less than significant with mitigation incorporated**.

MM-CUL-1 Workers Environmental Awareness Program Training

All construction personnel and monitors who are not trained archaeologists shall be briefed regarding inadvertent discoveries prior to the start of construction activities. A basic presentation and handout or pamphlet shall be prepared in order to ensure proper identification and treatment of inadvertent discoveries. The purpose of the Workers Environmental Awareness Program (WEAP) training is to provide specific details on the kinds of archaeological materials that may be identified during construction of the Project and explain the importance of and legal basis for the protection of significant archaeological resources. Each worker shall also learn the proper procedures to follow in the event that cultural resources or human remains are uncovered during ground-disturbing activities. These procedures include work curtailment or redirection, and the immediate contact of the site supervisor and archaeological monitor.

MM-CUL-2 Inadvertent Discovery Treatment

In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the Project, all construction work occurring within 50 feet of the find should immediately stop and a qualified archaeologist should be notified immediately to assess the significance of the find and determine whether or not additional study is warranted. If human remains or suspected human remains are discovered, all construction work occurring within 50 feet of the find should immediately stop. Depending upon the significance of the find, the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work such as preparation of an archaeological treatment plan, testing, data recovery, or monitoring may be warranted.

c) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant Impact with Mitigation Incorporated. No known burials, including those interred in a formal cemetery or those interred outside of formal cemeteries, exist within the Project site or within close proximity of the Project site, including the SCE Cortez Substation. However, there is always some potential for a previously undiscovered burial or a previously disturbed but unreported burial to be encountered during excavation. In the unlikely event that excavation activities during construction inadvertently uncover buried human remains, there are regulatory provisions to address the handling of human remains in Health and Safety Code Section 7050.5, Public Resources Code Section 5097.98, and CEQA Guidelines Section 15064.5(e). Pursuant to these codes, in the event that human remains are discovered during construction, construction activity must be halted and the area must be protected until the County coroner conducts an investigation into the circumstances, manner, and cause of death and the recommendations concerning the treatment and disposition of the human remains are made to the person responsible for the excavation or to their authorized representative, in the manner provided in Public Resources Code Section 5097.98. The County coroner is required to make a determination within 2 working days of notification of the

discovery of the human remains. If the County coroner determines that the remains are not subject to their authority, and if they recognize or have reason to believe the human remains to be those of a Native American, the coroner shall consult with NAHC by telephone within 24 hours to designate a Most Likely Descendant who will recommend appropriate measures to the landowner regarding the treatment of the remains. If the owner does not accept the Most Likely Descendant's recommendations, the owner or the Most Likely Descendant may request mediation by NAHC. Accordingly, the Project and associated SCE improvements would implement the requirements set forth by Health and Safety Code Section 7050.5, Public Resources Code Section 5097.98, and CEQA Guidelines Section 15064.5(e), which would ensure that the Project and associated SCE improvements would avoid any potentially significant impacts related to the disturbance of human remains. Additionally, **MM-CUL-1** would be implemented to ensure each worker would learn the proper procedures to follow in the event that human remains are uncovered during ground-disturbing activities and potential impacts would be reduced to a less-than-significant level. Therefore, impacts would be **less than significant with mitigation incorporated.**

3.6 Energy

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Energy – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

The analysis of the Project's impact on energy is informed by the Air Quality Technical Memorandum prepared in August 2025 by Dudek and provided in Appendix A-1.

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact. This section is informed by the modeling within the Air Quality Technical Report prepared for the Project (Appendix A-1). The short-term construction and long-term operation of the Project would require the consumption of energy resources in several forms at the Project site. Construction and operational energy consumption are evaluated in detail below. Energy use from the existing site was also evaluated to present the net energy impacts.

Electricity

Construction Use

Temporary electric power for as-necessary lighting and electronic equipment, such as computers inside temporary construction trailers, would be provided by SCE. The electricity used for such activities would be temporary and would have a negligible contribution to the Project's overall energy consumption. Impacts related to construction related electricity use would, therefore, be less than significant.

Operational Use

Project operation would require electricity for multiple purposes, including building heating and cooling, lighting, appliances, and electronics. For building electricity consumption, default electricity consumption rates in CalEEMod for the Project land uses and climate zone were used. Building operations for the Project would involve energy consumption for multiple purposes, including cooling, lighting, and electronics, as well as parking lot lighting. The total auxiliary electricity use for the Project is approximately 4,818,000 kilowatt-hours (kWh(per year of electricity (Appendix A). The existing site electricity use is estimated to be 358,375 kWh per year resulting in a net electricity use of 4,459,625 kWh per year for the Project. In 2022, there was 85,869,985,679 kWh of electricity consumption in the SCE territory (CEC 2025). The proposed improvements within the existing SCE Cortez Substation would not require substantial additional electricity beyond existing operations. The Project and associated SCE improvements would result in a negligible increase in electricity consumption. Impacts related to operational electricity use would, therefore, be less than significant.

Natural Gas

Construction Use

Natural gas is not anticipated to be required during construction of the Project and associated SCE improvements. Fuels used for construction would primarily consist of diesel and gasoline, which are discussed below under the "Petroleum" subsection. If natural gas were to be consumed as a result of Project construction, the amount would be minor and would have a negligible contribution to the Project's overall energy consumption. Impacts related to operational natural gas use would, therefore, be less than significant.

Operational Use

Natural gas is not anticipated to be required during operation of the Project and associated SCE improvements. The existing site is estimated to use 1,284,058 kilo-British thermal units of natural gas per year. Therefore, the Project would avoid this natural gas use. As such, impacts related to operational natural gas use would be less than significant.

Petroleum

Construction Use

Heavy-duty construction equipment associated with construction activities would rely on diesel fuel, as would haul and vendor trucks involved in delivery of materials to the Project site. Construction workers would travel to and from the Project site throughout the duration of construction. It is assumed in this analysis that construction workers would travel to and from the site in gasoline-powered light-duty vehicles.

Heavy-duty construction equipment of various types would be used during each phase of Project construction. Appendix A lists the assumed equipment usage for each phase of construction. Fuel consumption from construction equipment was estimated by converting the total carbon dioxide (CO_2) emissions from each construction phase to gallons using the conversion factors for CO_2 to gallons of gasoline or diesel. The conversion factor for gasoline is 8.78 kilograms per metric ton CO_2 per gallon, and the conversion factor for diesel is 10.21 kilograms per metric ton CO_2 per gallon (The Climate Registry 2021). The estimated diesel fuel usage from construction equipment is shown in Table 3.6-1.

Table 3.6-1. Total Project Construction Petroleum Demand

	Off-Road Equipment (diesel)	Haul Trucks (diesel)	Vendor Trucks (diesel)	Worker Vehicles (gasoline)
Year	Gallons			
2025	4,095.98	0.00	2,593.54	1,625.28
2026	36,016.65	4,967.68	17,630.75	10,596.81
2050	1,714.01	2,243.88	1,062.68	2,929.38
Total	**41,826.64**	**7,211.56**	**21,286.97**	**15,151.48**

Sources: Appendix A-1; The Climate Registry 2021.
Notes: CO_2 = carbon dioxide; MT = metric ton.

The Project is conservatively anticipated to consume approximately 15,152 gallons of gasoline and 70,325 gallons of diesel over construction and decommissioning. For comparison, approximately 59 billion gallons of petroleum will likely be consumed in California over the course of the Project's construction phase, based on the California daily petroleum consumption estimate of approximately 78.6 million gallons per day (EIA 2017). Within Los Angeles County, the estimated petroleum use in 2025 is 3.8 billion gallons per year (CARB 2025). The Project's consumption is negligible when compared to the petroleum that would be consumed in California and countywide over the course of construction. Furthermore, equipment greater than 25 horsepower would be subject to CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation. Overall, because petroleum use during construction would be temporary and would not be wasteful or inefficient, impacts would be less than significant.

Operational Use

Fuel consumption resulting from the Project's operational phase would be attributable to employees and maintenance workers traveling to and from the Project site. Petroleum fuel consumption associated with motor vehicles traveling to and from the Project site during operation is a function of vehicle miles traveled (VMT). Following the completion of construction activities, the Project would generate criteria pollutant

emissions from mobile sources (vehicular traffic) as a result of the periodic maintenance of the Project. The Project was assumed to require up to four employees twice per month visiting the site for maintenance. Similar to construction worker and truck trips, fuel consumption for operation is estimated by converting the total CO_2 emissions from VMT to gallons using the conversion factors for CO_2 to gallons of gasoline or diesel. Based on the default CalEEMod vehicle mix and the countywide proportion of gasoline and diesel on-road vehicle VMT, the vehicles associated with Project operations would likely be approximately 93% gasoline-powered and 7% diesel-powered vehicles. Gasoline is also used for landscaping equipment. Diesel fuel would also be used for maintenance and testing of the emergency generator. The estimated fuel use from the existing site and Project during operation is shown in Table 3.6-2.

Table 3.6-2. Project Operations – Petroleum Consumption

Fuel	Vehicle MT CO_2	Kilograms CO_2 per Gallon	Gallons
Project			
Gasoline	1.14	8.78	130.15
Diesel	42.00	10.21	4,114.03
Existing Site			
Gasoline	172.01	8.78	19,591.53
Diesel	42.02	10.21	4,115.21
Net (Project minus Existing Site)			
Gasoline	(170.87)	8.78	(19,461.38)
Diesel	(0.01)	10.21	(1.18)

Source: Appendix A-1; Appendix E.
Notes: MT = metric ton; CO_2 = carbon dioxide.

As depicted in Table 3.6-2, Project operation would result in a net reduction of approximately 19,463 gallons of petroleum fuel usage per year. By comparison, California as a whole consumes approximately 28.7 billion gallons of petroleum per year (EIA 2017). Within Los Angeles County, the estimated petroleum use in 2025 is 3.8 billion gallons per year (CARB 2025). Furthermore, the Project would result in less VMT and associated fuel use compared to the existing uses at the site.

Over the lifetime of the Project, the fuel efficiency of vehicles is expected to increase. As such, the amount of petroleum consumed as a result of vehicular trips to and from the Project site during operation is expected to decrease over time. There are numerous regulations in place that require and encourage increased fuel efficiency, such as efforts to accelerate the number of plug-in hybrids and zero-emissions vehicles in California, and increasingly stringent emissions standards (CARB 2017). As such, operation of the Project is expected to use decreasing amounts of petroleum over time due to advances in fuel economy. Impacts related to operational petroleum use would, therefore, be less than significant.

Although the Project would increase energy use, the use would be a small fraction of the statewide use and, due to efficiency increases, is expected to diminish over time (particularly with respect to petroleum). Given these considerations, energy consumption associated with the Project would not be considered inefficient or wasteful, and would result in a **less than significant impact**.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less Than Significant Impact. The Project would be subject to state regulations for energy efficiency, namely, California's Building Energy Efficiency Standards and CALGreen, both of which are set forth in CCR Title 24. The Project would support the generation of renewable energy production as it allows storage of intermittent sources like solar and wind. California's Building Energy Efficiency Standards were established in 1978 and serve to enhance and regulate California's building standards. These standards include regulations for residential and non-residential buildings constructed in California to reduce energy demand and consumption. The Building Energy Efficiency Standards are updated every 3 years to incorporate and consider new energy efficiency technologies and methodologies. CALGreen institutes mandatory minimum environmental performance standards for all ground-up, new construction of commercial, low-rise residential, and state-owned buildings, as well as schools and hospitals. The new 2022 standard became effective on January 1, 2023. The 2025 standards will be in effect on January 1, 2026. The Project would meet Building Energy Efficiency Standards and CALGreen standards to reduce energy demand and increase energy efficiency.

At a regional level, the Project would be subject to the policies set forth in SCAG's RTP/SCS, Connect SoCal (SCAG 2024). The RTP/SCS is a regional growth-management strategy that targets per-capita greenhouse gas (GHG) reduction from passenger vehicles and light-duty trucks in the Southern California region pursuant to Senate Bill (SB) 375. In addition to demonstrating the region's ability to attain and exceed the GHG emission-reduction targets set forth by CARB, Connect SoCal outlines a series of actions and strategies for integrating the transportation network with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands. Thus, successful implementation of Connect SoCal would result in more complete communities with a variety of transportation and housing choices, while reducing automobile use. The Project would result in a reduction in trips and associated VMT, supporting the goals in Connect SoCal. With regard to individual developments, such as the Project, the strategies and policies set forth in Connect SoCal include improved energy efficiency. Connect SoCal's goal is to actively encourage and create incentives for energy efficiency, where possible. Furthermore, the Project is designed to support the use and deployment of renewable energy resources. As discussed previously, the Project would comply with the 2022 CALGreen standards. For these reasons, the Project would be consistent with SCAG's Connect SoCal.

The Project would follow applicable energy standards and regulations during construction. In addition, the Project would be built and operated in accordance with all existing, applicable regulations at the time of construction. As such, the Project would not conflict with existing energy standards or regulations, and impacts would be **less than significant**.

3.7 Geology and Soils

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GEOLOGY AND SOILS – Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

The analysis of Project impacts associated with geology and soils is primarily based on information contained in the Geotechnical Engineering Report prepared for the Project in October 2024 by Terracon and included as Appendix D. The analysis of the Project's impact on paleontological resources is primarily based on information contained in the Paleontological Resource Assessment prepared in August 2025 by Dudek and included as Appendix E.

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

No Impact. According to maps produced by the state, the Project site is not located within an Alquist-Priolo Earthquake Fault Zone (CGS 2024). The Project site is located approximately 2.75 miles south of the Sierra Madre Fault Zone. Thus, the potential for fault rupture on the Project site is low. Furthermore, the construction and operation of the Project and associated SCE improvements would not increase the probability or exacerbate the potential for fault rupture to occur. Therefore, the Project and associated SCE improvements are not expected to result in substantial adverse effects, including the risk of loss, injury, or death, involving rupture of a known earthquake fault. There would be **no impact.**

ii) Strong seismic ground shaking?

Less Than Significant Impact. As with most of Southern California, the Project site could be subject to seismic ground shaking. The nearest active faults to the City include the Sierra Madre and Duarte and Lower Duarte faults, which are located approximately between 2 miles and 4 miles north of the City (City of Covina 2000). A significant earthquake originating along any of these, or other regional faults, could pose a hazard to buildings and people in the City.

In the event of strong seismic ground shaking on the Project site, the Project and associated SCE improvements would have the potential to undergo seismic damage, as is the case with surrounding buildings and structures. However, all Project components would be designed and constructed in accordance with existing federal, state, and City laws and guidelines concerning seismic safety, ensuring maximum feasible stability. Additionally, the Project and associated SCE improvements would not introduce new habitable structures, nor would it change the existing use of the site. Additionally, the Project and associated SCE improvements would not result in an increase in the probability or exacerbate the potential for strong seismic ground shaking to occur. Therefore, upon compliance with seismic safety regulations, the Project's impacts associated with strong seismic ground shaking would be **less than significant.**

iii) Seismic-related ground failure, including liquefaction?

No Impact. Liquefaction is a phenomenon that occurs when water-laden, loose and cohesionless soils are subject to intense seismic shaking and form a fluid-like soils condition below the ground surface. As a result, structural damage may occur as building foundations lose ground support. The Project site is not located in an area that is identified as being within a liquefaction zone (CGS 2024). Additionally, the Project and associated SCE improvements would not introduce habitable structures to the Project site such that it would expose more people to seismic-related ground failure risks. Furthermore, the Project and associated SCE improvements would not increase the probability or exacerbate the potential for seismic-related ground failure to occur. Therefore, the Project and associated SCE improvements are not expected to result in substantial adverse effects associated with seismic-related ground failure, including liquefaction. There would be **no impact.**

iv) Landslides?

No Impact. Landslides are mass movements of the ground that include rock falls, relatively shallow slumping and sliding of soil, and deeper rotational or transitional movement of soil or rock. The Project site, including the SCE Cortez Substation, is not located in an area that is identified as being susceptible to earthquake-induced landslides (CGS 2024). The site is relatively flat, and the geotechnical investigation did not identify evidence of historical landslides or slope instability. Therefore, **no impact** would occur.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. In an urbanized setting, substantial erosion or loss of topsoil typically occurs when ground disturbance causes soils to be exposed and the soils are washed away during a storm or wind event. The Project site is entirely paved with parking lots and existing buildings. Associated SCE improvements would be within areas previously disturbed within the existing SCE Cortez Substation footprint. Surface cover of asphalt and concrete pavement that is 2.5 inches to 3 inches thick was observed during the geotechnical investigation. Due to the anticipated disturbance of near surface soils during the demolition of existing structures and grading, shallow foundations bearing on engineered fill are recommended for support of the proposed BESS/substation equipment pads. These construction processes may cause temporary soil exposure. However, this process would not expose substantial amounts of the underlying soil. No large areas of exposed soils subject to erosion would be created as a result of implementation of the Project and associated SCE improvements. Additionally, in compliance with Section 8.50.100 of the City's Municipal Code, the Project Applicant would be required to prepare and submit an erosion and sediment control plan, which would establish best management practices (BMPs) that the Project would be required to abide by during construction to control erosion and sediment. As such, impacts associated with soil erosion or loss of topsoil would be **less than significant.**

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less Than Significant Impact. As described above, the Project site is not identified as an area susceptible to soils hazards, such as liquefaction or landslides. In the event that soil instability were to occur at the Project site, the BESS and substation facility would have the potential to undergo damage. However, the Project would be designed and constructed in compliance with existing federal, state, and City laws and guidelines concerning geologic safety, including the California Building Code, which outlines specific design, engineering, and development standards for structures. Compliance with the applicable regulations would ensure maximum feasible stability of the BESS. During construction, it is anticipated that the field grade would follow the existing site grades with minimum grading required to bring the site to finish grade. The construction contractor would be required to adhere to state and local requirements establishing safe construction and excavation practices, which would ensure that any temporary soil instability would be minimized to the extent practicable. For these reasons, the Project is not expected to result in substantial hazards related to soil instability. Furthermore, implementation of the Project and associated SCE improvements would not increase the probability or exacerbate the potential for landslides, lateral spreading, subsidence, liquefaction, or collapse to occur. Upon compliance with seismic safety regulations and standard construction requirements for excavation, impacts related to soil hazards associated with implementation of the Project and associated SCE improvements would be **less than significant**.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less Than Significant Impact. Expansive soils are clay-based soils that tend to expand (increase in volume) as they absorb water and shrink (lessen in volume) as water is drawn away. If soils consist of expansive clays, foundation movement and/or damage can occur if wetting and drying of the clay does not occur uniformly across the entire area. According to the Geotechnical Report (Appendix D), the subsurface materials encountered in borings are characterized by clayey soils within the upper 5 feet to 10 feet, underlain by interbedded layers of silty and clayey sand with lower fines content. As such, soils with clay components are present in the Project area, and the Project site could thus be potentially subject to soil expansion hazards. However, the potential for landslides and liquefaction is minimal due to the relatively flat area and the depth of the groundwater table. The Project would conform to the most recent CBC and construction design recommendations outlined in the Geotechnical Report. Design recommendations include site preparation guidelines, subgrade preparation, excavation, fill material and placement, compaction requirements, utility trench backfill, grading and drainage, exterior slab design and construction, earthwork construction considerations, and construction operation and testing. The Project would be conditioned to adhere to the recommendations in the geotechnical report as part of the conditions of approvals. Conformance with standard engineering practices and design criteria as well as the design recommendations in the Geotechnical Report would reduce the potential for substantial risks to life or property as a result of expansive soils. As such, impacts associated with expansive soils would be **less than significant.**

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The Project consists of the development of a BESS, with associated improvements at the SCE Cortez Substation to accommodate new equipment. Neither the Project nor the associated SCE improvements would include installation of septic tanks or alternative wastewater disposal systems. As such, there would be **no impact.**

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact with Mitigation Incorporated. No known paleontological resources were identified within the Project site, including the adjacent SCE Cortez Substation, as a result of the institutional records search or desktop geological and paleontological review (Appendix F). In addition, the Project site is not anticipated to be underlain by unique geologic features. The Project site is underlain by Holocene younger undivided alluvial fan and valley deposits, unconsolidated and at depth by Pleistocene older undivided alluvial fan and valley deposits, moderately to well consolidated. Holocene younger undivided alluvial fan and valley deposits have low paleontological sensitivity at the surface that increases to high paleontological sensitivity with depth. If encountered, which is dependent on the depth of excavations, Pleistocene older undivided alluvial fan and valley deposits, would have high paleontological sensitivity. The geotechnical report suggests a difference in sediment densities that may indicate the transition into Pleistocene age sediments at 5 feet below ground surface. Institutional records searches and literature review show that fossils have been found from the same sediments that underline the Project site, from as close as 2 miles away, which supports the finding of high sensitivity for these sediments. If

intact paleontological resources are located on site, ground-disturbing activities associated with construction of the Project, such as grading during site preparation, large diameter (2 feet or greater) augering and boreholes, and trenching for utilities, have the potential to destroy a unique paleontological resource or site. As such, the Project site is considered to be potentially sensitive for paleontological resources, and without monitoring, the potential damage to paleontological resources during construction associated with the Project is considered a potentially significant impact. Given the potential for Pleistocene sediments at depth, the Project site is highly sensitive for supporting paleontological resources below the depth of fill and younger sediments. Mitigation measures (**MM-GEO-1** and **MM-GEO-2**), presented below, would reduce potentially significant impacts to a less-than-significant level. Therefore, the Project would have a **less than significant impact with mitigation incorporated.**

MM-GEO-1 Retain a Qualified Paleontologist

Prior to commencement of any grading activity on-site, the Applicant shall retain a qualified paleontologist per the Society of Vertebrate Paleontology (SVP) (2010) guidelines to prepare and implement a Paleontological Resources Mitigation and Monitoring Plan (PRMMP) for the Project. The PRMMP shall be consistent with the SVP (2010) guidelines and would outline requirements for preconstruction meeting attendance and worker environmental awareness training; where monitoring is required within the Project site based on construction plans and/or geotechnical reports; procedures for adequate paleontological monitoring and discoveries treatment; and paleontological methods (including sediment sampling for microvertebrate fossils), reporting, and collections management. The qualified paleontologist or their designee shall attend the preconstruction meeting, and a qualified paleontological monitor shall be on-site during all rough grading and other significant ground-disturbing activities (including augering) in previously undisturbed, fine-grained Pleistocene alluvial deposits at depths starting at 5 feet or deeper and monitoring will conclude once ground disturbance below this depth is complete.

MM-GEO-2 Paleontological Resource Discovery

In the event that paleontological resources (e.g., fossils) are unearthed during grading, the paleontological monitor will temporarily halt and/or divert grading activity to allow recovery of paleontological resources. The area of discovery will be roped off with a 50-foot radius buffer. Once documentation and collection of the find is completed, the monitor will remove the rope and allow grading to recommence in the area of the find. Costs for laboratory processing and curation fees are the responsibility of the Applicant.

3.8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

The analysis of Project impacts to GHG is informed by the Greenhouse Gas Emissions Technical Memorandum prepared in August 2025 by Dudek and provided in Appendix F.

The significance criteria used to evaluate the Project impacts to GHG emissions are based on Appendix G of the CEQA Guidelines. According to Appendix G of the CEQA Guidelines, a significant impact related to GHG emissions would occur if the Project would:

A. Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.
B. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

Global climate change is a cumulative impact; a project participates in this potential impact through its incremental contribution combined with the cumulative increase of all other sources of GHGs. There are currently no established quantitative thresholds in Appendix G for assessing whether the GHG emissions of a project, such as the Project, would be considered a cumulatively considerable contribution to global climate change; however, all reasonable efforts should be made to minimize a project's contribution to global climate change. In addition, while GHG impacts are recognized exclusively as cumulative impacts (CAPCOA 2008), GHG emissions impacts must also be evaluated at a project level under CEQA.

The CEQA Guidelines do not prescribe specific methodologies for performing an assessment, do not establish specific thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA (CNRA 2009). The State of California has not adopted emission-based thresholds for GHG emissions under CEQA. The Governor's Office of Planning and Research's Technical Advisory, titled "Discussion Draft CEQA and Climate Change Advisory," states the following:

> Neither the CEQA statute nor the CEQA Guidelines prescribe thresholds of significance or particular methodologies for perming an impact analysis. This is left to lead agency judgment and discretion,

based upon factual data and guidance from regulatory agencies and other sources where available and applicable. Even in the absence of clearly defined thresholds for GHG emissions, such emissions must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact. (OPR 2018) Furthermore, the advisory document indicates that "in the absence of regulatory standards for GHG emissions or other scientific data to clearly define what constitutes a 'significant impact,' individual lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice." Section 15064.7(c) of the CEQA Guidelines specifies that "when adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence.

OPR Guidance

The OPR's Technical Advisory titled *CEQA and Climate Change: Addressing Climate Change through California Environmental Quality Act (CEQA) Review* states that "public agencies are encouraged but not required to adopt thresholds of significance for environmental impacts. Even in the absence of clearly defined thresholds for GHG emissions, the law requires that such emissions from CEQA projects must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact" (OPR 2008). Furthermore, the advisory document indicates that "in the absence of regulatory standards for GHG emissions or other scientific data to clearly define what constitutes a 'significant impact,' individual lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice" (OPR 2008).

SCAQMD

SCAQMD formed a GHG CEQA Significance Threshold Working Group to work with SCAQMD staff on developing GHG CEQA significance thresholds until statewide significance thresholds or guidelines are established. In December 2008, SCAQMD adopted an interim 10,000 metric tons (MT) of CO_2 equivalent (CO_2e) per year screening level threshold for stationary-source/industrial projects for which SCAQMD is the lead agency. From December 2008 through September 2010, SCAQMD hosted working group meetings and revised the draft threshold proposal several times, although it did not officially provide these proposals in a subsequent document. SCAQMD has continued to consider adoption of significance thresholds for residential and general land use development projects. The most recent proposal, issued in September 2010, uses the following tiered approach to evaluate potential GHG impacts from various uses (SCAQMD 2010):

Tier 1 Determine if CEQA categorical exemptions are applicable. If not, move to Tier 2.

Tier 2 Consider whether or not the Project is consistent with a locally adopted GHG reduction plan that has gone through public hearing and CEQA review, that has an approved inventory, includes monitoring, etc. If not, move to Tier 3.

Tier 3 Consider whether the project generates GHG emissions in excess of screening thresholds for individual land uses. The 10,000 MT CO_2e per year threshold for industrial uses would be recommended for use by all lead agencies. Under option 1, separate screening thresholds are proposed for residential projects (3,500 MT CO_2e per year), commercial projects (1,400 MT CO_2e

per year), and mixed-use projects (3,000 MT CO_2e per year). Under option 2, a single numerical screening threshold of 3,000 MT CO_2e per year would be used for all non-industrial projects. If the project generates emissions in excess of the applicable screening threshold, move to Tier 4.

Tier 4 Consider whether the project generates GHG emissions in excess of applicable performance standards for the project service population (population plus employment). The efficiency targets were established based on the goal of AB 32 to reduce statewide GHG emissions to 1990 levels by 2020. The 2020 efficiency targets are 4.8 MT CO_2e per service population for project level analyses and 6.6 MT CO_2e per service population for plan level analyses. If the project generates emissions in excess of the applicable efficiency targets, move to Tier 5.

Tier 5 Consider the implementation of CEQA mitigation (including the purchase of GHG offsets) to reduce the project efficiency target to Tier 4 levels.

The 3,000 MT CO_2e per year threshold was proposed a decade ago and was never adopted. However, the 3,000 MT CO_2e per year threshold was developed and recommended by SCAQMD, an expert agency, based on substantial evidence as provided in the Draft Guidance Document – Interim CEQA Greenhouse Gas Significance Threshold (SCAQMD 2008) and subsequent Working Group meetings (latest in 2010). This threshold uses the Executive Order S-3-05 goal as the basis, so it is not tied to only the 2020 target year and is thus not outdated. This threshold is also based on the 90% capture rate methodology, which means that 90% of total emissions from all new or modified projects would be subject to some type of CEQA analysis, which was the approach taken by SCAQMD to establish the stationary/industrial source threshold and by CARB (for interim threshold for stationary source projects); it was also one of the options suggested by the California Air Pollution Control Officers Association (quantitative threshold based on market capture). Further, this threshold has been used for hundreds, if not thousands, of GHG analyses performed for projects located within SCAQMD's jurisdiction.

Under Tier 3 option 2, the recommended SCAQMD threshold to apply to the Project is the 3,000 MT CO_2e per year for all non-industrial projects. Per the SCAQMD guidance, construction emissions should be amortized over the operational life of the Project, which is assumed to be 30 years (SCAQMD 2008). This impact analysis, therefore, adds amortized construction emissions to the estimated annual operational emissions, and then compares operational emissions to the proposed SCAQMD threshold of 3,000 MT CO_2e per year.

This analysis also considers consistency with regulations or requirements adopted by the 2008 Climate Change Scoping Plan (Scoping Plan) and subsequent updates and the SCAG 2024 RTP/SCS.

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than Significant Impact.

Construction and Decommissioning Emissions

Both construction and decommissioning of the Project and associated SCE improvements would result in GHG emissions, which are primarily associated with use of off-road construction equipment, on-road vendor trucks, and worker vehicles. As stated above, the SCAQMD recommends that construction emissions be amortized over a 30-year Project lifetime; therefore, the total construction GHG emissions were calculated,

amortized over 30 years, and added to the operational emissions. For conservative purposes, GHG emissions associated with decommissioning have also been amortized and have been added to the operational emissions.

CalEEMod was used to estimate GHG emissions during construction and decommissioning. Construction of the Project is anticipated to last up to 14 months. On-site sources of GHG emissions include off-road equipment and off-site sources include on-road vehicles (vendor trucks and worker vehicles). Decommissioning is assumed to last up to 7 months and includes similar on-site and off-site sources of GHG emissions. Table 3.8-1 presents construction GHG emissions for the Project from on-site and off-site construction and decommissioning emission sources.

Table 3.8-1. Estimated Annual Construction GHG Emissions

Year	CO_2	CH_4	N_2O	CO_2e
	Metric Tons			
2025	82.58	<0.01	<0.01	84.08
2026	720.79	0.03	0.04	733.96
2050[1]	136.72	<0.01	0.01	138.64
			Total	956.68
			Annualized emissions over 30 years (metric tons per year)	31.89

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent; GHG = greenhouse gas.
[1] 2050 represent the decommissioning phase of the Project.
See Attachment A of Appendix A-1 for complete results. <0.01 = less than 0.005

As shown in Table 3.8-1, the estimated total GHG emissions during construction and decommissioning of the Project and associated SCE improvements would be approximately 957 MT CO_2e. Amortized over 30 years, this equates to approximately 32 MT CO_2e per year.

Operational Emissions

CalEEMod was used to estimate potential Project-generated operational GHG emissions from energy (electricity), mobile, and offroad sources, and conservatively solid waste and water supply sources. Emissions from each category are discussed in the following text with respect to the Project. For additional details, see Section 2.2 for a discussion of operational emission calculation methodology and assumptions, specifically for area, energy (electricity), mobile, offroad, solid waste, stationary, and water supply sources. Operational year 2027 was assumed as the first year of operation. Table 3.8-2 presents the GHG emissions of the existing site and Project during operation including associated SCE improvements.

Table 3.8-2. Estimated Annual Operation GHG Emissions

Emissions Source	CO_2	CH_4	N_2O	CO_2e
	Metric Tons per Year			
Project				
Area	0.02	<0.01	<0.01	27.12
Energy	756.58	0.07	0.01	760.99
Mobile	1.40	<0.01	<0.01	1.42

Table 3.8-2. Estimated Annual Operation GHG Emissions

Emissions Source	CO_2	CH_4	N_2O	CO_2e
	Metric Tons per Year			
Offroad	0.45	<0.01	<0.01	0.45
Stationary	41.73	<0.01	<0.01	41.87
Waste	0.11	0.01	0.00	0.39
Water	0.04	<0.01	<0.01	0.04
			Total	832.28
			Amortized construction and decommissioning emissions	28.91
			Total with amortized construction emissions	861.19
Existing Site				
Area	0.61	<0.01	<0.01	0.61
Energy	124.81	0.01	<0.01	125.32
Mobile	214.03	0.01	0.01	217.19
Refrigerants	0.00	0.00	0.00	1.29
Waste	3.32	0.33	0.00	11.61
Water	9.71	0.23	0.01	16.99
			Total	373.03
			Net (Project minus Existing Site)	488.16

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent.
See Attachment A of Appendix A-1 for complete results. <0.01 = less than 0.005

As shown in Table 3.8-2, the estimated total GHG emissions during operation of the Project and associated SCE improvements would be approximately 861 MT CO_2e per year, including amortized construction and decommissioning emissions. The net emissions (Project minus Existing Site) would be 488 MT CO_2e per year. The Project and associated SCE improvements would not exceed the SCAQMD bright-line threshold of 3,000 MT CO_2e per year. Accordingly, impacts would be **less than significant**.

b) Would the project generate conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less than Significant Impact.

Consistency with CARB's Scoping Plan

The Scoping Plan, approved by CARB in 2008 and updated in 2014, 2017, and 2022 provides a framework for actions to reduce California's GHG emissions and requires CARB and other state agencies to adopt regulations and other initiatives to reduce GHGs. As such, the Scoping Plan is not directly applicable to specific projects, nor is it intended to be used for project-level evaluations.[8] Under the Scoping Plan, however, there are several state regulatory measures aimed at the identification and reduction of GHG

8 The Final Statement of Reasons for the amendments to the CEQA Guidelines reiterates the statement in the Initial Statement of Reasons that "[t]he Scoping Plan may not be appropriate for use in determining the significance of individual projects because it is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan" (CNRA 2009).

emissions. CARB and other state agencies have adopted many of the measures identified in the Scoping Plan. Most of these measures focus on area source emissions (e.g., energy usage, high-GWP GHGs in consumer products) and changes to the vehicle fleet (i.e., hybrid, electric, and more fuel-efficient vehicles) and associated fuels (e.g., Low-Carbon Fuel Standard), among others. The Project would comply with all applicable regulations adopted in furtherance of the Scoping Plan to the extent required by law.

The Scoping Plan recommends strategies for implementation at the statewide level to meet the goals of AB 32 and establishes an overall framework for the measures that will be adopted to reduce California's GHG emissions. Table 3.8-3 highlights measures that have been developed under the Scoping Plan and the Project's consistency with those measures. Table 3.8-3 also includes measures recommended in the Scoping Plan. To the extent that these regulations are applicable to the Project, its inhabitants, or uses, the Project and associated SCE improvements would comply with all applicable regulations adopted in furtherance of the Scoping Plan.

Table 3.8-3. Project Consistency with Scoping Plan GHG Emission-Reduction Strategies

Scoping Plan Measure	Measure Number	Project Consistency
Transportation Sector		
Advanced Clean Cars	T-1	*Consistent.* The Project site would be serviced by vehicles in compliance with CARB vehicle standards that are in effect at the time of vehicle purchase.
Low Carbon Fuel Standard	T-2	*Consistent.* Project site would be serviced by motor vehicles that would use compliant fuels.
Low Carbon Fuel Standard (18% reduction in carbon intensity by 2030)	Recommended	*Consistent. The Project site would be serviced by* motor vehicles that would use compliant fuels.
Regional Transportation-Related GHG Targets	T-3	*Not applicable.* The Project would not prevent CARB from implementing this measure.
Advanced Clean Transit	Recommended	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Last Mile Delivery	Recommended	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Reduction in Vehicle Miles Traveled	Recommended	*Consistent.* The Project would result in a reduction in VMT compared to the existing uses onsite.
Vehicle Efficiency Measures 1. Tire Pressure 2. Fuel Efficiency Tire Program 3. Low-Friction Oil	T-4	*Consistent.* These standards would be applicable to the light-duty vehicles that would access the Project site. Motor vehicles driven by the Project's employees would maintain proper tire pressure when their vehicles are serviced. The Project's

Table 3.8-3. Project Consistency with Scoping Plan GHG Emission-Reduction Strategies

Scoping Plan Measure	Measure Number	Project Consistency
4. Solar-Reflective Automotive Paint and Window Glazing		employees would replace tires in compliance with CARB vehicle standards that are in effect at the time of vehicle purchase. Motor vehicles driven by the Project's employees would use low-friction oils when their vehicles are serviced. The Project's employees would purchase vehicles in compliance with CARB vehicle standards that are in effect at the time of vehicle purchase. In addition, the Project would not prevent CARB from implementing this measure.
Ship Electrification at Ports (Shore Power)	T-5	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Goods Movement Efficiency Measures 1. Port Drayage Trucks 2. Transport Refrigeration Units Cold Storage Prohibition 3. Cargo Handling Equipment, Anti-Idling, Hybrid, Electrification 4. Goods Movement Systemwide Efficiency Improvements 5. Commercial Harbor Craft Maintenance and Design Efficiency 6. Clean Ships 7. Vessel Speed Reduction	T-6	*Not applicable.* The Project would not prevent CARB from implementing this measure.
California Sustainable Freight Action Plan	Recommended	*Not applicable.* The Project would not prevent CARB from implementing this measure.
Heavy-Duty Vehicle GHG Emission Reduction 1. Tractor-Trailer GHG Regulation 2. Heavy-Duty Greenhouse Gas Standards for New Vehicle and Engines (Phase I)	T-7	*Consistent.* Heavy-duty vehicles would be required to comply with CARB GHG reduction measures. In addition, the Project would not prevent CARB from implementing this measure.
Medium- and Heavy-Duty Vehicle Hybridization Voucher Incentive project	T-8	*Consistent.* The Project's medium- and heavy-duty vehicles (e.g., delivery trucks) during construction and operation could take advantage of the vehicle hybridization action, which would reduce GHG emissions through increased fuel efficiency. In addition, the Project would not prevent CARB from implementing this measure.

Table 3.8-3. Project Consistency with Scoping Plan GHG Emission-Reduction Strategies

Scoping Plan Measure	Measure Number	Project Consistency
Medium and Heavy-Duty GHG Phase 2	Recommended	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
High-Speed Rail	T-9	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Transportation Electrification	2022 Appendix D	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
VMT Reduction		
Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer)	2022 Appendix D	*Consistent.* The Project site is within an urban developed area within the City. The Project site is immediately surrounded by developed commercial, light-manufacturing, and light industrial uses.
Does not result in the loss or conversion of natural and working lands	2022 Appendix D	*Consistent.* The Project site is within an urban developed area within the City and would not result in the loss or conversion of natural and working land.
Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre), or, Is in proximity to existing transit stops (within a half mile), or Satisfies more detailed and stringent criteria specified in the region's SCS.	2022 Appendix D	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Reduces parking requirements by: Eliminating parking requirements or including maximum allowable parking ratios (i.e., the ratio of parking spaces to residential units or square feet); or Providing residential parking supply at a ratio of less than one parking space per dwelling unit; or For multifamily residential development, requiring parking costs to be unbundled from costs to rent or own a residential unit.	2022 Appendix D	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.

Table 3.8-3. Project Consistency with Scoping Plan GHG Emission-Reduction Strategies

Scoping Plan Measure	Measure Number	Project Consistency
At least 20 percent of units included are affordable to lower-income residents	2022 Appendix D	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Results in no net loss of existing affordable units	2022 Appendix D	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Uses all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking	2022 Appendix D	*Consistent.* The Project would be all-electric and would not use natural gas during operation.
Electricity and Natural Gas Sector		
Energy Efficiency Measures (Electricity)	E-1	*Consistent.* The Project will comply with current Title 24, Part 6, of the California Code of Regulations energy efficiency standards for electrical appliances and other devices at the time of building construction.
Energy Efficiency (Natural Gas)	CR-1	*Consistent.* The Project would be all-electric and would not use natural gas during operation.
Solar Water Heating (California Solar Initiative Thermal Program)	CR-2	*Not applicable.* The Project would not prevent CARB from implementing this Scoping Plan Measure.
Combined Heat and Power	E-2	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Renewable Portfolios Standard (33% by 2020)	E-3	*Consistent.* While the Project supports this goal, the 2020 goal has passed and no longer applies.
Renewable Portfolios Standard (50% by 2050)	Recommended	*Consistent.* The Project would support the Renewable Portfolios Standard goal by helping integrate renewable energy to the electric grid and supporting grid reliability and resilience, thereby assisting the State to reach GHG emissions reduction targets.
Senate Bill 1 Million Solar Roofs (California Solar Initiative, New Solar Home Partnership, Public Utility Programs) and Earlier Solar Programs	E-4	*Not applicable.* The Project would not prevent CARB from implementing this measure.

Table 3.8-3. Project Consistency with Scoping Plan GHG Emission-Reduction Strategies

Scoping Plan Measure	Measure Number	Project Consistency
Water Sector		
Water Use Efficiency	W-1	*Not applicable.* The Project would not prevent CARB from implementing this Scoping Plan Measure.
Water Recycling	W-2	*Not applicable.* The Project would not prevent CARB from implementing this Scoping Plan Measure.
Water System Energy Efficiency	W-3	*Not applicable.* This is applicable for the transmission and treatment of water, but it is not applicable for the Project.
Reuse Urban Runoff	W-4	*Not applicable.* The reuse of urban water on site was determined to not be feasible. The Project would not prevent CARB from implementing this Scoping Plan Measure.
Renewable Energy Production	W-5	*Not applicable.* Applicable for wastewater treatment systems. Not applicable for the Project; however, the Project would support the storage of renewable energy.
Green Buildings		
State Green Building Initiative: Leading the Way with State Buildings (Greening New and Existing State Buildings)	GB-1	*Not applicable.* The Project would not prevent CARB from implementing this Scoping Plan Measure.
Green Building Standards Code (Greening New Public Schools, Residential and Commercial Buildings)	GB-2	*Not applicable.* The Project would not prevent CARB from implementing this Scoping Plan Measure.
Beyond Code: Voluntary Programs at the Local Level (Greening New Public Schools, Residential and Commercial Buildings)	GB-3	*Not applicable.* The Project would not prevent CARB from implementing this Scoping Plan Measure.
Greening Existing Buildings (Greening Existing Homes and Commercial Buildings)	GB-4	*Not applicable.* The Project would not prevent CARB from implementing this Scoping Plan Measure.
Industry Sector		
Energy Efficiency and Co-Benefits Audits for Large Industrial Sources	I-1	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Oil and Gas Extraction GHG Emission Reduction	I-2	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Reduce GHG Emissions by 20% in Oil Refinery Sector	Recommended	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.

Table 3.8-3. Project Consistency with Scoping Plan GHG Emission-Reduction Strategies

Scoping Plan Measure	Measure Number	Project Consistency
GHG Emissions Reduction from Natural Gas Transmission and Distribution	I-3	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Refinery Flare Recovery Process Improvements	I-4	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Work with the local air districts to evaluate amendments to their existing leak detection and repair rules for industrial facilities to include methane leaks	I-5	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Recycling and Waste Management Sector		
Landfill Methane Control Measure	RW-1	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Increasing the Efficiency of Landfill Methane Capture	RW-2	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Mandatory Commercial Recycling	RW-3	*Consistent.* During both construction and operation, the Project would comply with all state regulations related to solid waste generation, storage, and disposal, including the California Integrated Waste Management Act, as amended. During construction, all wastes would be recycled to the maximum extent possible.
Increase Production and Markets for Compost and Other Organics	RW-4	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Anaerobic/Aerobic Digestion	RW-5	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Extended Producer Responsibility	RW-6	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Environmentally Preferable Purchasing	RW-7	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.

Scoping Plan Measure	Measure Number	Project Consistency
Forests Sector		
Sustainable Forest Target	F-1	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
High Global Warming Potential Gases Sector		
Motor Vehicle Air Conditioning Systems: Reduction of Refrigerant Emissions from Non-Professional Servicing	H-1	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
SF_6 Limits in Non-Utility and Non-Semiconductor Applications	H-2	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Reduction of Perfluorocarbons in Semiconductor Manufacturing	H-3	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Limit High Global Warming Potential Use in Consumer Products	H-4	*Consistent.* The Project's employees would use consumer products that would comply with the regulations that are in effect at the time of manufacture.
Air Conditioning Refrigerant Leak Test During Vehicle Smog Check	H-5	*Consistent.* Employees of the Project would conduct air conditioning refrigerant leak tests during periodic vehicle smog checks.
Stationary Equipment Refrigerant Management Program – Refrigerant Tracking/Reporting/Repair Program	H-6	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Stationary Equipment Refrigerant Management Program – Specifications for Commercial and Industrial Refrigeration	H-6	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
SF_6 Leak Reduction Gas Insulated Switchgear	H-6	*Consistent.* The Project would use gas insulated switchgear that would be subject to CARB regulations and meet the leak rate mandates.
40% reduction in methane and hydrofluorocarbon emissions	Recommended	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.

Table 3.8-3. Project Consistency with Scoping Plan GHG Emission-Reduction Strategies

Scoping Plan Measure	Measure Number	Project Consistency
50% reduction in black carbon emissions	Recommended	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.
Agriculture Sector		
Methane Capture at Large Dairies	A-1	*Not applicable.* This measure does not apply to the Project. The Project would not inhibit CARB from implementing this Scoping Plan Measure.

Consistency Evaluation with Senate Bill 375 (Southern California Association of Governments Regional Transportation Plan/Sustainable Communities Strategy)

SCAG updates the RTP/SCS every 4 years. The currently adopted RTP/SCS is the 2024–2050 RTP/SCS, also known as Connect SoCal 2024 (SCAG 2024). The 2024–2050 RTP/SCS identifies the following strategy areas to support its environmental goals: Sustainable Development, Air Quality, Clean Transportation, Natural and Agricultural Lands Preservation, and Climate Resilience. An analysis of the Project's compliance with the applicable strategies is presented below.

- Sustainable Development. The 2024–2050 RTP/SCS identifies sustainable development, including water and energy-efficient building practices and green infrastructure, as a strategy to reduce GHG emissions. Landscaping would use water-saving native plantings and contribute to passive cooling strategies. The Project would support the continued development of renewable energy sources. The Project would be remotely managed and would not result in an increase in daily operational mobile trips.
- Air Quality. The 2024–2050 RTP/SCS identifies air quality and meeting federal and state ambient air quality standards as a co-benefit of reducing GHG emissions. The Project would not exceed the SCAQMD's threshold of significance for any criteria air pollutant and would not result in any significant impacts related to air quality. The Project would also reduce emissions of criteria air pollutants from mobile sources compared to the existing use onsite.
- Clean Transportation. The 2024–2050 RTP/SCS identifies electric vehicle charging infrastructure, adoption of zero-emission vehicles, and clean transit as ways to reduce GHG emissions from mobile sources. The Project would decrease traffic in the area during operation as it would be remotely managed and only require periodic maintenance visits.
- Natural and Agricultural Lands Preservation. The 2024–2050 RTP/SCS promotes the conservation and restoration of natural and agricultural lands through several policies, such as quantifying the carbon sequestration potential of natural and agricultural lands and prioritization of sensitive habitat and wildlife corridors for permanent protection. The Project would be located on an existing developed site and not on natural or agricultural lands.

- **Climate Resilience:** The 2024–2050 RTP/SCS promotes regional coordination and solutions for effective emergency response for climate-related hazards. Additionally, in the category of climate resilience, SCAG has established the following policies: prioritize the most vulnerable populations and communities subject to climate hazards; support local and regional climate and hazard planning; support nature-based solutions to increase regional resilience; promote sustainable water use planning; and, support an integrated planning approach to help jurisdictions meet housing needs in a drier environment. While it does not directly pertain to these climate resilience efforts, the Project would not conflict with these policies. The Project would repurpose existing developed land, which is generally considered more efficient and sustainable than new construction.

Based on the analysis above, the Project and associated SCE improvements would be consistent with the Connect SoCal 2024.

As discussed above, the Project and associated SCE improvements would be consistent with applicable GHG reduction measures found within the Scoping Plan and AB 32 and the SCAG Connect SoCal. Therefore, the Project and associated SCE improvements would not conflict with an applicable GHG reduction plan and impacts would be considered less than significant.

The Project and associated SCE improvements would not impede the attainment of the GHG reduction goals for 2030 or 2050 identified in Executive Order S-03-05, SB 32, and AB 1279. Executive Order S-03-05 establishes the following goals: GHG emissions should be reduced to 2000 levels by 2010, to 1990 levels by 2020, and to 80% below 1990 levels by 2050. SB 32 establishes for a statewide GHG emissions reduction target whereby CARB, in adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions, shall ensure that statewide GHG emissions are reduced to at least 40% below 1990 levels by December 31, 2030. AB 1279 requires GHG emissions be reduced to 85% below 1990 levels by 2045. In addition, AB 1279 requires the state to achieve net zero GHG emissions by no later than 2045 and achieve and maintain net negative GHG emissions thereafter.

While there are no established protocols or thresholds of significance for that future year analysis, CARB forecasts that compliance with the current Scoping Plan puts the state on a trajectory toward meeting these long-term GHG goals, although the specific path to compliance is unknown (CARB 2014).

As discussed previously, the Project and associated SCE improvements are consistent with the GHG emission reduction measures in the Scoping Plan and would not conflict with the state's trajectory toward future GHG reductions. The Project would help integrate renewable energy into the electric grid and support grid reliability and resilience, thereby assisting the State and the City to reach greenhouse gas emissions reduction goals. The Project's compliance with applicable Scoping Plan strategies and Connect SoCal 2024 measures would assist in meeting the City's contribution to GHG emission reduction targets in California. With respect to future GHG targets under SB 32, Executive Order S-03-05, and AB 1279, based on the considerations previously outlined, the Project and associated SCE improvements, would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and no mitigation is required. Therefore, the Project, including the associated SCE improvements, would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions, and impacts would be **less than significant**.

3.9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

The analysis of Project impacts associated with hazards and hazardous materials is primarily based on information contained in the Phase I Environmental Site Assessment prepared for the Project in July 2023 by Dudek and provided in Appendix G.

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact. As described in Section 2.4, Project Construction and Phasing, the Project site would be prepared prior to delivery and installation of the battery units. Construction requires routine use of hazardous materials, including fuels, oils, lubricants, welding equipment, and paints. The types of hazardous materials used are typical, commercially available, and not anticipated to be extremely or acutely hazardous. Specifically, construction of the Project would require storage of up to 1,000 gallons of fuel for onsite equipment. Under California Health and Safety Code Section 25500 et seq., facilities, including construction sites, that handle larger than the reportable quantity of hazardous materials established by California Environmental Protection Agency are required to prepare a Hazardous Materials Business Plan (HMBP). Reportable quantities are 55-gallons of liquid, 500 pounds of solid, or 200 cubic feet of gaseous hazardous material or waste. The HMBP requires basic information about the location, type, quantity, and health risks associated with the hazardous materials used and stored on site. The HMBP also requires response procedures and subjects the site to regular inspections by the local Certified Unified Program Agency (CUPA). For the Project site, the local CUPA is Los Angeles County Fire Department (LACoFD). BMPs are also required for hazardous materials storage and handling in accordance with the National Pollutant Discharge Elimination System construction permit (see Section 3.10). As fuel storage is not expected to exceed 1,000 gallons of total aboveground storage, the site is not required to prepare a Spill Prevention, Control, and Countermeasures (SPCC) Plan under Code of Federal Regulations (CFR) Title 40 Section 112.

Transportation of batteries to the Project site introduces a risk of hazardous material releases along transportation routes. Batteries will be transported by licensed companies in accordance with all federal, state, and local requirements along the route. Compliance with UN 38.3 is mandatory for shipping lithium batteries via air, land, or sea, which reduces potential impacts during transport. UN 38.3 requires batteries be tested for integrity, and those test reports be included with shipping. UN 38.3 also requires labeling and packaging requirements for lithium batteries. Finally, batteries would be transported in their enclosures, which are described below, which further reduces the potential for releases of hazardous materials, as the batteries would be enclosed within prefabricated secondary containment.

As outlined in Section 2.3, Project Characteristics, once the site is prepared, batteries would be delivered in prefabricated enclosures that house the battery modules and power conversion system equipment. The enclosures have insulation, module cooling systems, battery management systems, fire detection equipment, PCS equipment, and a medium voltage step-up transformer. These systems have self-contained electrochemical battery systems designed with conventional storage technologies with proven safety and performance records and meet international safety standards (UL 1642, UL 1973, UL 9540, UL 9540A, IEC 62619, California Public Utilities Commission General Order 167). The substation would be located adjacent to the existing SCE Cortez Substation. While the placement of batteries does introduce hazardous materials onto the Project site, including lithium-ion battery cells and mineral oils in the transformers, the battery systems are fully enclosed in outdoor-rated enclosures designed with appropriate ventilation, acid-resistant materials, and spill-protection supplies. Batteries are in self-contained systems rated to contain a release (acid-resistant) and integrated monitoring systems, which are designed to monitor the batteries 24/7, detect upset conditions early, and automatically shut down batteries if any measured parameters are outside of specified thresholds. During installation, charging, discharging, and normal routine operation, the batteries would not release hazardous materials or gases. Potential for accident and incident conditions, such as malfunction or battery damage, is discussed in 3.9(b).

The Project would operate 7 days per week, 365 days per year, and would be remotely monitored through a SCADA system. Routine operations and repairs would require operations and maintenance staff to visit the site on a temporary basis. No maintenance equipment or materials would be stored on the Project site. As with construction, storage of hazardous materials above reportable quantities requires preparation of an HMBP and SPCC Plan, as applicable based on the volume and type of storage on site. This would require regulatory review of all systems, hazardous material storage, protective measures for handling and storage of hazardous materials, and would subject the site to routine regulatory inspections.

Upon decommissioning at the end of the Project's 30-year lifespan, the BESS would be recycled or repurposed. Most materials, including the batteries, are recyclable or can be repurposed. Hazardous materials and fluids, such as fuel, hydraulic fluids, and/or oils, contained within Project components, would either be transferred directly to a tanker truck and discharged in accordance with local, state, and federal regulations or the entire Project component would be hauled offsite and disposed of in accordance with local, state, and federal regulations. Other items that may be stored onsite, that are not feasible to remove at the point of generation, such as smaller container lubricants, paints, thinners, solvents, cleaners, batteries, and sealants, would be kept in a locked utility structure with integrated secondary containment that meets CUPA and Resource Conservation and Recovery Act requirements for hazardous waste storage until removed for offsite recycling or disposal. Site personnel involved in handling these materials would be trained to properly handle them. Containers used to store hazardous materials would be inspected regularly for any signs of failure or leakage. Additional procedures would be specified in a HMBP closure plan submitted to the CUPA. Transportation of the removed hazardous materials would comply with regulations for transporting hazardous materials, including those set by the Department of Transportation, the U.S. Environmental Protection Agency, California Department of Toxic Substances Control, California Highway Patrol, and California State Fire Marshal.

Along with appropriate use of the battery enclosures, which are designed to contain potential hazards from batteries, adherence to federal, state, and local rules and regulations would not create a significant hazard to the public or environment through routine transport, use, and disposal of hazardous materials. Impacts would be **less than significant**.

b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact. As discussed in Section 3.9(a), the Project would introduce hazardous materials onto the Project site, including lithium-ion battery cells and mineral oils in the transformers. Construction, maintenance, and decommissioning of the Project would also introduce small volumes of fuels, oils, solvents, paints, and other similar hazardous materials. There is a potential that accidental releases could occur, either from human error, such as dropping or spilling containers, or from equipment malfunctions, such as battery failure. During construction and decommissioning, the Project site would be manned by onsite construction staff and, therefore, regularly inspected for leaks, equipment damage, or spills. Workers would be trained in hazardous materials handling to reduce the potential for hazardous material releases as required by the California Environmental Protection Agency HMBP rules and regulations and the federal SPCC rules and regulations. Therefore, in the event of an incident, response would be rapid, and workers would be sufficiently trained in response techniques.

Should accidental breakage or leakage of a battery occur, the risk is minimized by the design of the battery enclosure system and required compliance with applicable codes, such as California Building Code and California Public Utilities Commission General Order 167. As discussed in Section 3.9(a), the battery enclosures are rated to contain a release (acid-resistant) and integrated monitoring systems would provide 24/7 remote monitoring and diagnostics, which are designed to detect changing conditions early and automatically shut down batteries if any measured parameters are outside of specified thresholds. Spill protection and response supplies would be stored onsite in the event release response is required. Operations and maintenance include regular inspections of the battery systems, including inspections for signs of failure, leakage, or damage which could result in either, would be identified for repairs.

In the unlikely event of a battery cell malfunction, such as a thermal runaway event, a fire could occur. Fire detection measures are incorporated in the Project design in accordance with NFPA safety standards and are designed and certified so that fire will not propagate from one storage cabinet to another. Fire protection would also include multiple fire detection systems on site and within the individual BESS units. Each BESS enclosure would have a fire rating in conformance with the 2022 California Fire Code. In addition, each BESS unit contains an onboard battery management system that monitors the appropriate state of individual battery cells and relays information 24/7. In the event of an anomaly, the system is designed to remove power from the affected cells to further reduce exacerbation of fire or other types of hazardous material releases.

While current systems are designed to contain fires within a single battery module, if a fire does occur, pollutants could be emitted into the atmosphere. Exhaust created by a thermal event would be similar with a conventional fire, particularly those involving plastics, because materials that make up lithium-ion batteries contain hydrocarbons and other organic compounds similar that produce similar combustion emissions to plastics (Fire & Risk Alliance 2025). Overall, environmental impacts from BESS fires are minimal when compared to other large industrial and structure fires (Fire & Risk Alliance 2025). In addition, electrolyte added to the cells during manufacturing is fully absorbed into the cell material and enclosed within the cell casing, which eliminates the risk of material leaking from the cell even if water is applied for fire suppression. In addition to built-in fire protection features, as required by the City's Zoning Ordinance and LACoFD's Fire Code, LACoFD would review and approve the Project's emergency response procedures, as described in the Emergency Response Plan (ERP).

In compliance with SB 38 and General Order 167 and as required by the City's Zoning Code Amendment 25-2, each commercial battery energy storage system project is required to prepare a site-specific Commissioning Plan, Fire Safety Compliance Plan, Operations and Maintenance Manual, Emergency Operations Plan, Noise Study, Decommissioning Plan, and Procedure Manual for safe shut-down and startup in the event of an emergency. These documents would be submitted to LACoFD as part of the City's permitting process.

Additionally, a project-specific HMA (Appendix A-2) was prepared to evaluate potential fire, explosion, and hazardous materials risks associated with the proposed battery energy storage system. The HMA evaluated credible failure scenarios using UL 9540A fire test data and applicable fire code performance criteria and concluded that the system's design features would prevent uncontrolled fire or explosion conditions and would not expose the public or emergency responders to substantial safety hazards. Accordingly, impacts related to fire and explosion hazards would be less than significant, and no mitigation measures are required.

With adherence to federal, state, and local regulations, implementation of the Project and associated SCE improvements, as designed, would not create a significant hazard to the public or environment through reasonable foreseeable upset or accident conditions. Impacts would be **less than significant**.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less than Significant Impact. There are no kindergarten through 12th grade (K-12) schools located within 0.25 miles of the Project site (GreenInfo 2021; CDE 2025). Tri-Community Adult Education, located at 160 North Barranca Avenue, is located approximately 0.23 miles south of the Project site, which places the campus within 0.25 miles. The nearest K-12 school is Ben Lomond Elementary School, located approximately 0.46 miles north of the Project site at 621 East Covina Boulevard.

Construction and decommissioning activities would involve the use of heavy equipment, which would result in emissions from vehicle and equipment exhausts. As calculated in Section 3.3(c), Project construction and associated SCE improvements would not exceed the established localized significance thresholds for air quality, and thus, would result in a less than significant impact to sensitive receptors during construction and operation. With protections described in Section 3.9(b), any accidental releases of hazardous materials during construction, operation, or decommissioning would be controlled and contained to the Project site, and no emissions to the nearby school are anticipated.

As discussed in Section 3.9(a), installation, charging, discharging, and normal routine operation of the batteries would not release hazardous materials or gases. Should an accidental release occur, batteries are in self-contained systems rated to contain a release (acid-resistant) and integrated monitoring systems which are designed to detect upset conditions early and automatically shut down batteries if any measured parameters are outside of specified thresholds. Spill protection and response supplies would be stored within each container. Within the containers, emissions from battery failures would be contained and no emissions would occur.

As discussed in Section 3.9(b), if a fire does occur, pollutants could be emitted into the atmosphere. Any exhaust created by a thermal event would be similar to a Class A Fire, which is a fire that consists of ordinary combustibles such as wood, paper, fabric, and plastic. With intrinsic fire protections in place, however, the risk of fire is greatly reduced such that it is a less than significant risk, and therefore emissions from those fires would pose a less than significant risk.

As described, the Project would not result in hazardous emissions or handling of acutely hazardous materials or waste within 0.25 miles of a school. Impacts would be **less than significant.**

d) Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. Government Code Section 65962.5 requires the California Environmental Protection Agency to compile a list of hazardous waste and substances sites (Cortese List). While the Cortese List is no longer maintained as a single list, the following databases provide information that meet the Cortese List requirements:

1. List of Hazardous Waste and Substances sites from Department of Toxic Substances Control Envirostor database (Health and Safety Codes 25220, 25242, 25356, and 116395);
2. List of LUST Sites by County and Fiscal Year from the State Water Resources Control Board GeoTracker database (Health and Safety Code 25295);
3. List of solid waste disposal sites identified by the State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit (Water Code Section 13273[e] and 14 CCR Section 18051);
4. List of "active" Cease and Desist Orders and Cleanup and Abatement Orders from the State Water Resources Control Board (Water Code Sections 13301 and 13304); and
5. List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by the Department of Toxic Substances Control.

A Phase I ESA was completed in July 2023 for the western portion of the Project site, specifically APNs 8429-008-029 and 8429-008-028 (Appendix G). The Phase I ESA included a search for regulatory environmental records, including Cortese List sites. While the western portion of the Project site was identified on multiple regulatory databases, these databases were administrative listings indicative of hazardous material handling and permitted waste disposal, and did not show evidence of releases to the environment. The western portion of the Project site was not identified on any Cortese List databases, nor were any Cortese List sites identified nearby that have impacted the environmental condition of the Project site.

For the purposes of this analysis, a review of Cortese List sites was completed in June 2025 for the eastern portion of the Project site, specifically APNs 8429-007-007, 8429-007-006, and 8429-007-005. The eastern portion of the Project site is not located on a Cortese List site, nor does it appear to have been environmentally impacted by a nearby Cortese List site (SWRCB 2025; DTSC 2025; CalEPA 2025).

As the Project site is not located on a Cortese List site, nor has it been impacted by a Cortese List site, **no impact** would occur.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The Project site is not located within 2 miles of a public use airport (AirNav 2025), nor is the Project site located within an area where notification is required for construction under 14 CFR Part 77 (FAA 2025). As such, the Project would not result in a safety hazard or excessive noise due to nearby airports, and **no impact** would occur.

f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. Through permit review, the Project would be required to comply with regulations relating to emergency access, water supply, emergency evacuation, and defensible space (wildfire) specified in the County Fire Code and City's General Plan (further discussed below). As discussed in Section 3.9(b), LACoFD has the jurisdictional responsibility for emergency response for both fire and hazardous material releases. As part of the permitting process, LACoFD would review the Project's fire protection and suppression plans, and any emergency response personnel who could be required to respond to the Project site would be trained on the site-specific emergency response requirements. For hazardous materials, submittal of the HMBP, as discussed in Sections 3.9(a) and 3.9(b) would provide LACoFD a list of hazardous material storage, including the type, quantity, location, hazard class, and response requirements. The HMBP can be used in emergency responses to better understand hazardous material-related issues for the safety of response personnel.

The City of Covina's General Plan, Chapter 5, Safety Element, identifies potential City-specific hazards that could occur, risk assessment for each type of identified hazard, goals, policies, and emergency preparedness and response procedures (City of Covina 2000). The City of Covina's Emergency Plan includes a structure for the City to respond to emergencies and natural disasters and puts in place working relationships and mutual aid agreements with other nearby cities, Los Angeles County, and the State of California. According to the General Plan, the fire department (LACoFD) coordinates local emergency preparedness activities, and all major public streets serve as principal evacuation routes. Construction, operation, and demolition would not require closure of adjoining roads, nor would it increase traffic such that emergency response or evacuation would be impacted, as construction equipment would remain on the Project site, and operation does not require continuous occupation of the site.

With adherence to the City and County emergency response ordinances and policies, which requires submittal of the HMBP and ERP for review and approval, the Project is not expected to impair implementation of nor physically interfere with emergency response or evacuation plans. Impacts would be **less than significant.**

g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less Than Significant Impact. As discussed in Section 3.20(a), the Project site is not located within a Fire Hazard Severity Zone (FHSZ) (CAL FIRE 2024). The Project would comply with regulations relating to emergency access, water supply, and defensible space specified in the County Fire Code, and would be serviced by LACoFD. The closest fire station is LACoFD Station 154, located approximately 0.7 miles southwest of the Project site. The Project would comply with NFPA 1710, which is a standard that specifies the required emergency response times for fire incidents. With the proximity to Station 154, NFPA 1710 response times are met. While the urbanized nature of the area and lack of FHSZ limits the potential for wildland fires, there is a potential for fires to occur at the Project site, which is discussed in detail in Sections 3.9(a) and 3.9(b). Intrinsic fire protection within the battery containers reduces the potential for fire, should it occur, to spread to adjoining containers, and also reduces the risk for fires to spread offsite. The submittals required as part of the permitting process, including emergency operations plans and procedure

manuals, would further inform the LACoFD on fire protection requirements and emergency response needs, further reducing the risk of a potential fire spreading onto adjoining properties.

SCE's improvements would occur within previously disturbed areas of the existing SCE Cortez Substation. These improvements would consist of equipment upgrades and modifications within an already developed utility setting, which is regularly maintained for fire prevention and access. The disturbed and developed nature of the property further limits the potential for wildland fire ignition or spread. In addition, SCE improvements would be subject to compliance with all applicable fire codes, facility-specific safety protocols, and oversight by LACoFD, thereby ensuring that fire risks are minimized. With the proposed fire protection measures in place, and adherence to City, County, and NFPA requirements, the Project is not anticipated to expose people or structures to a significant risk due to wildland fires. Impacts would be **less than significant.**

3.10 Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☒
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☐	☒
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒

The analysis of Project impacts associated with hydrology is primarily based on information contained in the Drainage and Low Impact Development Report prepared for the Project in September 2025 by Kimley-Horn and Associates, Inc. and provided in Appendix H.

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less than Significant Impact. Construction and demolition of the Project and associated SCE improvements would involve ground-disturbing activities for grading that could result in sediment discharge in stormwater runoff. Additionally, construction and demolition would involve the use of oil, lubricants, and other chemicals that could be discharged from leaks or accidental spills. These potential sediment and chemical discharges during construction and demolition would have the potential to impact water quality in receiving water bodies. The City's Municipal Code, however, prohibits discharges to the storm drain system of any pollutant, which includes fuel, chemical waste, or other materials that have potential adverse effects on water quality (Section 8.50.030 of the City's Municipal Code). Additionally, the City's Municipal Code requires the implementation of BMPs that serve to minimize the potential for leaks, spills, or discharges of pollutants to occur (Section 8.50.060 of the City's Municipal Code). Additionally, the Project would prepare and implement a Stormwater Pollution Prevention Plan (SWPPP), which would include water quality BMPs to ensure that water quality standards are met, and that runoff from the construction and demolition work areas do not cause degradation of water quality in receiving water bodies. Specifically, BMPs would require run-off from the Project site and associated SCE work areas to be diverted away from sensitive areas. In addition, an SPCC Plan would be developed for site operations, consistent with federal and state law (Health & Safety Code Section 25504 and California Code of Regulations Title 22 Section 66262.34). Standard site management practices and typical equipment maintenance, in combination with the implementation of municipal code requirements involving stormwater quality, would generally preclude leaks and spills of a magnitude that would adversely impact stormwater runoff. The Project and associated SCE improvements would be subject to and comply with applicable City, state, and federal water quality regulations.

Under Section 303(d) of the Clean Water Act, states are required to identify water bodies that do not meet their water quality standards. Stormwater runoff from the Project ultimately drains via Charter Oak Wash and Walnut Creek Channel to the San Gabriel River (Reach 3) which is listed as impaired for several constituents under Section 303(d) of the Clean Water Act, including copper, indicator bacteria, chlorine, and total dissolved solids. However, as detailed in the Project's Drainage and Low Impact Development

(LID) Report (Appendix H), the Project would reduce impervious surfaces from 100 percent under existing conditions to approximately 16.5 percent and 28.4 percent for the west and east sites, respectively. This increase in pervious area would improve on-site infiltration and reduce both runoff volumes and peak flows relative to existing conditions.

Pursuant to City's Municipal Code Section 8.50.120, the Project would be required to prepare a Low Impact Development (LID) plan such that post-construction stormwater would be retained at a volume of the greater of a 85th percentile storm event or the first 0.75-inch of stormwater runoff from a storm event (i.e., the stormwater quality design volume [SWQDv]). To achieve this, the Project incorporates two drainage management areas, each served by a bioretention basin designed to retain and treat 100 percent of the SWQDv before any overflow. Each bioretention basin would contain engineered soil media designed to filter stormwater and promote infiltration into the underlying native soils, allowing treated runoff to percolate into the ground at a controlled rate while removing sediments and pollutants. The bioretention basins are sized to provide adequate infiltration within 96 hours and are supported by infiltration testing indicating design rates exceeding the minimum 0.3 inches per hour requirement. Overflows beyond basin capacity would follow existing drainage patterns and discharge south onto the adjacent Metrolink railroad corridor, matching existing hydrology. No new subsurface storm drain infrastructure is proposed, and detention is not required due to the overall decrease in imperviousness and runoff volumes. Because the Project would reduce impervious surfaces, increase infiltration capacity, and incorporate filtration and treatment features, consistent with City's Municipal Code, it would not result in discharge that violates water quality standards or waste discharge requirements.

Groundwater impacts would not occur because the Project involves shallow grading and no dewatering or excavation to groundwater levels. Infiltration would occur through engineered bioretention media prior to reaching native soil, and no underground storage tanks or wells are proposed that could introduce contaminants.

Accordingly, with implementation of required BMPs, the Construction General Permit, and the approved LID Plan, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. Impacts would be **less than significant.**

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less than Significant Impact. Basin recharge occurs through percolation of precipitation and artificial recharge activities at spreading grounds, among other sources. The Project site, including the adjacent SCE Cortez Substation, is developed, and, therefore, future development of the Project and associated SCE improvements would not increase the sites' effective impervious area. As described in Section 3.10(a) above, implementation of the proposed Project would decrease impervious area from 100 percent under existing conditions to approximately 16.5 percent and 28.4 percent for the west and east lots, respectively, and introduce landscaped and gravel areas that would enhance infiltration capacity (Appendix H). Each drainage management area includes a bioretention basin designed to retain and infiltrate the stormwater quality design volume on site. Therefore, the Project would improve the potential for localized groundwater recharge relative to existing conditions.

The Project and associated SCE improvements would occur within previously developed or disturbed areas that do not serve as important groundwater recharge zones. There are no groundwater wells located on site and the Project (including associated SCE improvements) would not involve the withdrawal of groundwater In addition, water demand would be limited to typical construction and operational needs that can be met through existing municipal supplies.

Therefore, the Project and associated SCE improvements would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge in a manner that would impede the basin's sustainable groundwater management. Impacts would be **less than significant** in this regard, and no mitigation is required.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off-site?

No Impact There are no naturally occurring permanent surface water features within the City. As previously mentioned, implementation of the Project and associated SCE improvements would not increase the sites' effective impervious area and, as such, would not increase the amount of runoff from the sites. During operation, stormwater flows would be directed to storm drainage features and would not come into contact with bare soil and would not create an opportunity for erosion or siltation on or off site. As such, **no impact** would occur.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

No Impact. The Project has been designed to appropriately control drainage and stormwater in compliance with the City's hydrology and water quality requirements. Specifically, the Project design is consistent with the requirements of the City's Municipal Code Chapter 8.50 Storm Water Quality and Urban Runoff Control, and incorporates LID features consistent with the Los Angeles Regional Quality Control Board Order No. 2021-0105 (Municipal Separate Storm Sewer System [MS4] Permit). As detailed in the Project's Drainage and LID Report (Appendix H), the existing west site and east site are fully developed and 100 percent impervious. With implementation of the Project, imperviousness would decrease to approximately 16.5 percent and 28.4 percent, respectively, due to the introduction of landscaped and gravel areas and the installation of two bioretention basins designed to capture and infiltrate on-site runoff. Because the Project would reduce impervious surfaces and improve infiltration capacity, it would not increase the rate or amount of surface runoff compared to existing conditions.

Runoff generated during storm events would be directed to the proposed bioretention basins, which are designed to retain and treat the full stormwater quality design volume on-site prior to overflow. Any overflow would discharge via a weir toward the adjacent Metrolink railroad corridor, following existing drainage patterns and matching existing discharge rates. The associated SCE improvements would occur within the existing SCE Cortez Substation and would not introduce new impervious surfaces or alter drainage patterns in a manner that could increase runoff or flooding potential.

Therefore, the Project and associated SCE improvements would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite, and **no impact** would occur.

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. Runoff generated by the Project and associated SCE improvements would be directed to two on-site bioretention basins—one on each lot—designed to capture, retain, and infiltrate the full stormwater quality design volume (SWQDv). Any overflow beyond basin capacity would follow existing drainage patterns and surface flow south toward the adjacent Metrolink railroad corridor. No new subsurface storm drain infrastructure is proposed, and the Project would reduce impervious surfaces compared to existing conditions. Therefore, the Project would not increase the rate or amount of runoff or exceed the capacity of existing or planned stormwater drainage systems.

During operation, the Project and associated SCE improvements would not require routine water use aside from occasional irrigation of landscaped areas along East Edna Place. . The associated SCE improvements would occur within the existing SCE Cortez Substation, an already developed utility facility with established drainage infrastructure. As such, the associated SCE improvements would not substantially alter drainage patterns or introduce new impervious surfaces.As discussed in Section 3.9(a), construction of the Project would temporarily increase potential sources of stormwater pollutants on the Project site. These potential pollutants would include construction-related chemicals such as petroleum products used for construction equipment and sediments resulting from temporary ground disturbance. However, the duration of construction and the amount of required equipment and materials for the Project would be limited. Additionally, compliance with the Construction General Permit and implementation of BMPs required by Chapter 8.50 of the City's Municipal Code, including a SWPPP to control erosion, sedimentation, and material handling, would minimize the potential for stormwater contamination to occur during construction of the Project.

Accordingly, the Project and associated SCE improvements would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater systems or provide substantial additional sources of polluted runoff. Impacts would be **less than significant.**

iv) Impede or redirect flood flows?

Less Than Significant Impact. The Project site and associated SCE work areas are located within Federal Emergency management Agency (FEMA) Zone D – Area of Undetermined Flood Hazards per the Flood Insurance Rate Map (FIRM) pane for the area. As previously discussed, implementation of the Project and associated SCE improvements would not change the amount of impervious surfaces on site. As such, impacts associated with impeding or redirecting flood flows would be **less than significant.**

d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

Less Than Significant Impact. As previously mentioned, the Project site and associated SCE work area is located within FEMA Zone D – Area of Undetermined Flood Hazards per the FIRM pane for the area. The nearest body of water to the Project site is the Puddingstone Reservoir and Dam complex, located approximately 5 miles to the east of the Project site. In the event of dam failure, some areas of the City could be subject to flooding-related hazards. As specified in the General Plan Safety Element, in the event of dam failure, flooding could reach the City in as little as 20 minutes, and rushing water could overflow the banks of Walnut Creek by approximately 0.25 miles on each side (City of Covina 2000). The Project site is located approximately 3 miles northwest of Walnut Creek and is thus situated outside of the potential area of flooding that is described in the General Plan. As such, In the unlikely event of dam failure at the Puddingstone Reservoir and Dam complex, the Project site, including the associated SCE work area, is not anticipated to be susceptible to hazardous flooding conditions. There are other reservoir-serving dams north and northeast of the City in the San Gabriel Mountains that could also break. However, as stated in the General Plan Safety Element, potentially negative impacts on the City would be minimized because these facilities are all several miles from the City, which would enable most, if not all, of the water to be caught by storm drains in adjacent communities and also would allow officials adequate time for emergency activities. Additionally, the community's flood control system in the upper and central portions of the City is expected to be able to handle incoming residual waters, in the unlikely event of dam breakage to the north of the City (City of Covina 2000). Impacts related to flooding would, therefore, be **less than significant.**

Seiches are earthquake-induced waves in enclosed bodies of water, such as lakes or reservoirs. Puddingstone Reservoir, the closest reservoir to the Project site, is located approximately 3 miles northeast of the site. The City has identified seiches as a potential hazard to the community due to the presence of the Puddingstone Reservoir and Dam complex (City of Covina 2000). In the General Plan Safety Element, the City identifies several courses of action to deal with the impacts of seiches including administering reasonable development standards for properties abutting Walnut Creek, which extends west of Puddingstone Dam and could be affected in the event of a seiche, and continuing emergency preparedness activities (City of Covina 2000). The Project site does not abut Walnut Creek and would not conflict with the City's emergency preparedness activities. While a catastrophic earthquake event and associated seiche could pose a hazard to portions of the City, inundation of the Project site is not anticipated due to intervening distance between Puddingstone Reservoir and the Project site and the flood control infrastructure in the urbanized areas around the Project site. Impacts related to seiches would, therefore, be **less than significant.**

A tsunami is a sea wave generated by an underwater seismic disturbance, such as a sudden faulting or landslide activity. Because the City is not located in a coastal area (the City is located approximately 27 miles inland from the Pacific Ocean), the risk of tsunami affecting the Project area is very low. For the reasons described above, impacts associated with flooding, seiche, and tsunamis would be **less than significant.**

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

No Impact. The Los Angeles Regional Water Quality Control Board has adopted the Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan) for its region of responsibility, which includes the City of Covina (Los Angeles RWQCB 2014). The Basin Plan contains water quality regulations and implementation programs for the region. As previously discussed, the Project and associated SCE improvements are not anticipated to cause substantial runoff or increase of pollutants that would impact water quality or groundwater management. Additionally, the Project and associated SCE improvements would be required to comply with the City's regulations regarding stormwater management practices during construction. As such, the Project and associated SCE improvements would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan, and there would be **no impact.**

3.11 Land Use and Planning

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

a) Would the project physically divide an established community?

No Impact. The Project site is located within the Covina City limits. The Project site is a developed industrial/commercial site surrounded by mostly industrial and commercial developments with residential properties located to the north (approximately 330 feet) and west (approximately 250 feet) of the Project site. The Project parcels are currently being used for industrial and commercial operations including a recreational vehicle and boat storage lot. The existing SCE Cortez Substation is an already developed utility facility. Historical imagery from Google Earth indicates the Project site, including the SCE Cortez Substation, has been developed for industrial, commercial, and utility purposes for over 30 years. Implementation of the Project would include construction of the BESS facility, on-site substation, gen-tie line, and collector line, while SCE improvements would be limited to modifications and upgrades within the existing Cortez Substation footprint. Because the on-site and surrounding land uses are already defined by industrial, commercial, and utility development, and because the Project and SCE improvements would be compatible with those existing uses, the proposed improvements would not physically divide an established

community. As such, the Project would not have the potential to create a division within an established community and there would be **no impact.**

b) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less than Significant Impact. The Project would be developed consistently with the Project site's General Industrial (GI) General Plan land use designation and Light Manufacturing (M-1) zoning district, and associated development standards, such that the Project would have no potential for a significant effect on the environment. The City-initiated Zoning Code Amendment 25-2 amended Chapter 17.54 (M-1 Light Manufacturing Zone) of Title 17 (Zoning) of the Covina Municipal Code to include BESS facilities as a conditionally permitted use under Section 17.54.030. Accordingly, the Project would obtain a Conditional Use Permit and would be consistent with the City's Zoning Code. The Project and associated SCE improvements would comply with all applicable provisions of the City's Zoning Code, including development standards, as well as relevant state and federal regulations. The Project is consistent with applicable City plans for the Project site and would be designed in accordance with all applicable requirements and conditions related to BESS facilities and electric/public utility transmission stations. Therefore, impacts would be **less than significant.**

3.12 Mineral Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a) Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. According to the California Geologic Energy Management Division, there are no oil, gas, geothermal, or other known wells located on the Project site. California Geologic Energy Management Division maps indicate that the City has two dry holes; however, both are located in residential areas and have been abandoned and plugged. (Dry holes are wellbores that have not encountered resources in economically producible quantities) (CalGEM 2025). As such, the development of the Project would not have the potential to interfere with extraction of oil, gas, or geothermal resources.

The City is located within the San Gabriel Production-Consumption Region for Portland Cement Concrete–grade aggregate resources, as mapped by the Division of Mines and Geology (renamed the California Geological Survey in 2006) (Division of Mines and Geology 1982a). The Division of Mines and Geology has mapped the Project site within Mineral Resource Zone 3 for aggregate resources (Division of Mines and Geology 1982b). Mineral Resource Zone 3 is a designation given to "areas containing mineral deposits the significance of which cannot be evaluated from available data." The majority of the City has been mapped within Mineral Resource Zone 3. Portions of the City, particularly to the north, are within Mineral Resource Zone 2, which is a designation given to "areas where adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists" (Division of Mines and Geology 1982b). The City's General Plan indicates that the state identified the presence of two subsurface areas in the northern part of the City that may contain mineral deposits. However, the City's General Plan states that the state has declared these areas to be insignificant due to urbanization and potentially negative incursions that would preclude extraction (City of Covina 2000). Additionally, the City's General Plan states that there are no mining activities, aggregate production activities, or drilling/producing of minerals in the City and that such activities are prohibited from occurring within the City. Due to the urbanized nature of the City, including the Project area, mineral resource extraction would be an incompatible land use. Furthermore, the Project and associated SCE improvements are proposed within an urbanized, built-out area and would not involve land use changes that would affect the availability of mineral resources in the City. For these reasons, **no impact** to the availability of state or regionally important mineral resources would occur.

b) ***Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?***

No Impact. According to the City's General Plan Natural Resources and Open Spaces Element, there are no significant mineral resources present in the City (City of Covina 2000). Additionally, the City's General Plan states that there are no mining activities, aggregate production activities, or drilling/producing of minerals occurring in the City. Furthermore, the City's zoning ordinance prohibits the extraction or production of aggregates. As such, the City has not identified any locally important mineral resource recovery sites. Therefore, the Project would not result in the loss of availability of a locally important mineral resource, and **no impact** would occur.

3.13 Noise

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. NOISE – Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

The analysis of the Project's impact on noise is informed by the Noise and Vibration Assessment prepared in November 2025 by Dudek and provided in Appendix I.

Existing Setting

The Project site is in Los Angeles County, approximately 15 miles east of the City of Los Angeles, in the City of Covina. The general area immediately surrounding the Project site includes similar commercial, manufacturing, and light industrial uses. Beyond this area to the west and north, there are multi-family residential uses, and a senior center and park to the northwest. There is a railroad alignment immediately bordering the Project site to the south, with commercial and institutional uses beyond this. The west site is bordered by the SCE Cortez Substation to the east with similar commercial, manufacturing, and light industrial uses beyond both sites.

One long-term (46-hour) unattended and four short-term (15-minute) attended sound pressure level measurements were conducted on February 17 to 19, 2025, to characterize background sound levels at and near the Project site. Measurement locations are shown in Figure 3.13-1. Table 3.13-1 summarizes the results of the noise measurements. Detailed sound level measurement data are included in Appendix I.

Table 3.13-1. Sound Level Monitoring Results, February 19, 2025, dBA L_{eq-1hr}

Site	Measurement Location	Time	Primary Noise Source(s)	Measured Leq (dBA)	Quietest Hour, Daytime	Quietest Hour, Nighttime
ST-1	Nearest Residences to North, along Hurst Street	9:33 a.m.to 9:48 a.m.	Industrial sounds, distant traffic	55	50 (b)	46 (b)
ST-2	Southern Site Boundary along Railroad	9:52 a.m. to 10:07 a.m.	Vehicular traffic	53	50 (b)	46 (b)
ST-3	Residential setback along Barranca Avenue	10:13 a.m. to 10:28 a.m.	Vehicular traffic	69	60 (b)	56 (b)
ST-4	Northern Site Boundary along Edna Place	10:33 a.m. to 10:48 a.m.	Vehicular traffic	63	57 (b)	53 (b)
LT-1	Northern Site Boundary along Edna Place	12:00 p.m. to 10:20 a.m. (a)	Vehicular traffic	56-75	60	56

Notes:
L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = A-weighted decibels; L_{dn} = day-night average sound level; ST = short-term measurement location. LT = long-term measurement location. See Figure 3.13-1 for measurement locations.
(a) Long-term measurement was conducted for a 46-hour period on February 17-19, 2025.
(b) Calculated based on long-term measurement results.

Significance Thresholds

To determine whether a project would result in a significant noise impact, Appendix G of the current California Environmental Quality Act Guidelines requires consideration of whether a project would result in:

1. A substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
2. The generation of excessive ground-borne vibration or ground-borne noise levels.
3. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, the exposure of people residing or working in the project area to excessive noise levels.

In light of these above significance criteria, this analysis uses the following standards to evaluate potential noise and vibration impacts.

- Construction noise – The City's Municipal Code limits construction to between the hours of 7:00 a.m. and 8:00 p.m. on weekdays and Saturdays, with no construction allowed on Sundays or holidays. Construction occurring within these hours is exempt from the City's noise limits. For informational purposes, this analysis compares Project construction generated sound levels to the Federal Transit Administration construction noise level threshold of 80 A-weighted decibels (dBA) Leq over an 8-hour period.
- Transportation noise – A noise impact due to transportation noise would be considered significant if Project-generated traffic causes the existing levels to increase by more than 3 dB CNEL (considered a perceptible increase in environmental noise).
- Stationary operations noise – For medium and high-density residential properties, Project operation sound sources are limited to the City's 60 dBA L_{50} threshold during daytime hours (7 a.m. to 10 p.m.) and 50 dBA

L_{50} threshold during nighttime hours (10 p.m. to 7 a.m.). The City includes an allowance for ambient / background sound and a penalty for tonal sounds.

- Construction vibration – Caltrans Guidance (Caltrans 2020) indicates that a vibration velocity of 0.24 ips (inches per second) peak particle velocity (PPV) received at a structure would be considered annoying by occupants and recommends that a vibration level of 0.3 ips PPV be used as the threshold for building damage risk to residential structures and 0.5 ips PPV be used as the threshold for building damage to modern industrial and commercial structures. These thresholds are used in this analysis to determine vibration impacts.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less than Significant Impact.

Construction Noise

Methodology

One of the most extensive and widely used databases for sound levels from motorized or powered construction equipment is the Noise Source Database developed under National Cooperative Highway Research Program 25-49, Development of a Highway Construction Noise Prediction Model (NASEM 2022). While the focus of data compilation was for equipment that would typically be employed for the construction of transportation facilities, the list is comprehensive enough to be useful in assessing sound levels for nearly every activity for which powered equipment is used. Table 3.13-2 provides a list of the maximum sound levels generated by various powered equipment that could be associated with construction of the Project and associated SCE improvements.

Table 3.13-2. Selected Powered Equipment Noise Emission Levels

Equipment	Average Sound Level (dBA L_{eq}) – 50 feet from Source	Maximum Sound Level (dBA L_{max}) – 50 feet from Source
Air Compressor	66	67
Aerial Lift (Man Lift)	72	73
Backhoe	76	84
Compactor (Plate)	—	75
Compactor (Roller)	82	83
Concrete Mixer	81	82
Concrete Saw	85	88
Crane, Mobile	74	76
Dozer	80	86
Forklift	—	88
Generator	67	68
Grader	—	79
Horizontal Bore Drill	87	88
Loader	72	81

Table 3.13-2. Selected Powered Equipment Noise Emission Levels

Equipment	Average Sound Level (dBA L_{eq}) – 50 feet from Source	Maximum Sound Level (dBA L_{max}) – 50 feet from Source
Paving - Asphalt	—	83
Paving - Concrete	85	88
Pump	73	74
Scraper	—	92
Flatbed Truck	—	74
Welding Machine	71	72

Source: NASEM 2022.
Notes: dBA = A-weighted decibel; L_{eq} = average noise level equivalent; L_{max} = maximum instantaneous noise level; — = Equipment without average (L_{eq}) noise levels are non-stationary and best represented only by maximum instantaneous noise level (L_{max}).

The equipment sound levels presented in Table 3.13-2 include both average L_{eq} and maximum L_{max} sound levels, measured at a distance of 50 feet using a "slow" response time constant (1 second). Usually, construction equipment operates in alternating cycles of full power and low power, producing average noise levels over time that are less than the maximum noise level. The average sound level of construction activity also depends on the amount of time that the equipment operates and the intensity of construction activities during that time. Noise emissions from construction of the Project and associated SCE improvements were estimated based upon default construction scenario information provided by CalEEMod (Version 2022.1.1.30) for the type and size of proposed development and included phasing, equipment mix, and vehicle trips. SCE improvements would be limited to equipment upgrades and modifications within the existing SCE Cortez Substation footprint, requiring a smaller scale of construction activity than the proposed BESS facility. Their noise contributions are included in the modeling assumptions and represent a minimal component of overall construction noise. The construction equipment mixes used for estimating the Project-generated construction noise emissions are included in Appendix I.

Construction Equipment Inventory

The California Air Resources Board CalEEMod was used to identify the construction equipment anticipated for development of the Project, including earthwork, utility trenching and equipment installation, and paving activities. The equipment list is based upon the detailed Project description; CalEEMod identified the anticipated equipment shown in Table 3.13-3 for each phase of the Project construction.

Table 3.13-3. Construction Equipment Per Phase

Construction Phase	On Site Equipment Types (and Quantities)	One-Way Vehicle Trips (by Type) per Day
Demolition of Existing Facilities / Site Preparation	Excavator, Grader, Rubber Tired Loader, Skid Steer Loader, Tractor/Loader/Backhoe, Generator Set (1 each)	Autos (40), Haul Trucks (12)
Grading	Grader, Tractor/Loader/Backhoe, Skid Steer Loader, Generator Set (1 each)	Autos (40), Vendor Trucks (2), Haul Trucks (4)
Collector Substation Installation	Tractor/Loader/Backhoe	Autos (40), Vendor Trucks (4), Haul Trucks (4)

Table 3.13-3. Construction Equipment Per Phase

Construction Phase	On Site Equipment Types (and Quantities)	One-Way Vehicle Trips (by Type) per Day
Battery/Container Installation	Rubber Tired Loader, Excavator, Forklift, Crane, Grader, Skid Steer Loader, Welder, Generator Set (1 each)	Autos (12), Vendor Trucks (14), Haul Trucks (4)
Gen-tie Installation	Tractor/Loader/Backhoe, Concrete Saw, Other Equipment (1 each)	Autos (10), Vendor Trucks (4), Haul Trucks (4)
Decommissioning	Tractor/Loader/Backhoe	Autos (40), Vendor Trucks (10), Haul Trucks (8)

On-Site Construction Noise Assessment

With the sound sources identified in Tables 3.13-2 and 3.13-3 above, an analysis was performed with a Microsoft Excel–based noise prediction model using the National Cooperative Highway Research Program reference data shown in Table 3.13-2. Input variables include the equipment type (backhoe, crane, truck, etc.), the number of equipment pieces, the duty cycle for each piece of equipment (i.e., percentage of each hour the equipment typically works), and the distance from the sensitive receptor. Pile driving is not anticipated as a method of construction. Refer to Appendix I for the construction modeling inputs and results. Construction noise levels were predicted at the nearest sound-sensitive land uses (i.e., residences) in each direction from the Project site, based on the distance between the closest Project construction boundary and these residences. Aggregate sound emissions from Project construction activities, broken down by sequential phase of construction, was predicted for the worst-case construction activity occurring along the closest construction boundary to the off-site closest sensitive receptors.

Construction activities would be limited to between 7:00 a.m. and 8:00 p.m. on weekdays and Saturdays, with no construction allowed on Sundays or holidays. The City does not contain any quantitative noise limits for construction; therefore, it is appropriate to employ a numeric standard adopted by another agency for daytime construction noise assessment. In its Transit Noise and Vibration Impact Assessment guidance manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (L_{eq8hr}) when detailed construction noise assessments are performed to evaluate potential impacts to community residences or other noise-sensitive land uses surrounding a project (FTA 2018). Although this FTA guidance is not a regulation, many communities employ it as a quantified standard in the absence of such limits at the local jurisdictional level. Dudek compared predicted construction noise levels to the recommended FTA construction noise exposure limits and to measured ambient noise levels.

Noise-sensitive uses in the general vicinity of the Project site include residences located about 250 feet to the west and about 340 feet to the north of the site. Using the provided construction information and the distance identified from the edge of a future construction zone boundary to the closest receivers, the construction noise model was used to predict sound levels from on-site construction activities. The construction noise was modeled at distances representative of the closest noise-sensitive receptors to the Project site, without taking shielding into account. The results are summarized in Table 3.13-4. Most of these residences are well shielded from the site by intervening commercial structures, which would provide 5 to 20 dB of additional reduction from the conservative noise levels given in Table 3.13-4.

Table 3.13-4. Construction Noise Levels, Worst-Case

Task/Activity	Closest Residences to West (250 feet)	Closest Residences to North (340 feet)
	dBA $L_{eq\ 8hr}$	dBA $L_{eq\ 8hr}$
Demolition of Existing Facilities / Site Preparation	65	62
Grading	63	60
Collector Substation Installation	58	55
Battery/Container Installation	71	68
Gen-tie Installation	72	69
Decommissioning	62	59

Note: $L_{eq\ 8hr}$ = average noise level equivalent over an 8-hour period.

Table 3.13-4 presents the results of the construction noise prediction assuming all equipment is simultaneously operating along the Project site boundary closest to the identified receiver, without taking shielding from intervening buildings into account. As indicated in Table 3.13-4, worst-case construction noise levels would range from 58 to 72 dBA $L_{eq\ 8hr}$ at unshielded residences to the west and 55 to 69 dBA $L_{eq\ 8hr}$ at unshielded residences to the north. The construction average noise levels reported in Table 3.13-4 at the worst-case exposure receiver (residence to the west on Barranca Avenue) would be up to 3 dB above the measured daytime level and up to 12 dB above the calculated quietest hour (see ST-3 in Table 3.13-1), which would be barely perceptible to clearly noticeable. At residences to the north, worst-case construction would be up to 14 dB above the measured daytime level and up to 19 dB above the calculated quietest hour (see ST-1 in Table 3.13-1), which would be clearly noticeable. During other phases of construction and as construction equipment travels around the site, sound levels would be lower and may be barely noticeable. The Project is not anticipated to include such construction activities lasting more than 14 months, with a portion of the schedule only involving commissioning of the Project, with limited equipment use and substantially lower construction noise generation. The Project would therefore not be considered to generate significant construction noise impacts based on construction duration.

Construction activities would comply with the FTA recommended construction noise limit of 80 dBA $L_{eq\ 8hr}$ and would be conducted during the City's allowable hours. The average noise levels at exterior areas would not be harmful, nor would they present a deterrent to use of outdoor activity, yard, or patio areas. Residences shielded by intervening structures would experience sound levels that are 5 to 20 dBA lower than those described above. Consequently, on-site construction noise levels would result in a **less than significant** temporary noise impact.

Construction Traffic Noise Assessment

One-way vehicle trips per day during each phase of construction are provided in Table 3.13-4. Based on the traffic study conducted for the Project, the peak period of construction would generate approximately 92 daily trips (62 autos, 22 medium trucks, and 8 heavy trucks) and 39 AM and PM peak hour trips (31 autos, 6 medium trucks, and 2 heavy trucks). Given the location of the Project, construction vehicles are most likely to travel along East Edna Place east to Grand Avenue or west to Barranca Avenue. There are no residences located along East Edna Place, but there are residences along Grand Avenue and Barranca Avenue.

Traffic noise modeling using the Federal Highway Administration's Traffic Noise Model, TNM, (FWHA, 2004) and assuming all traffic is traveling along a single roadway, indicates that peak hourly construction traffic would result in an hourly average noise level of 55 dBA L_{eq} at a distance of 50 feet from the centerline and at a speed of 40 mph (the speed limit of both Grand Avenue and Barranca Avenue). As given in Table 3.13-1 (see ST-3), existing daytime sound levels along Barranca Avenue range from 60 to 69 dBA. Given that Grand Avenue is a more traveled roadway than Barranca Avenue, existing traffic noise levels along Grand Avenue would be expected to be higher than those along Barranca Avenue. While individual truck movements associated with Project construction traffic may be noticeable as they pass by sound sensitive locations, such occasions would sound similar to existing heavy truck pass-bys, and the overall increase would not be measurable. Vehicle trips associated with the SCE improvements would be minimal and are included in this assessment. The increase in traffic noise levels during construction would be negligible. This would be a **less than significant** temporary noise impact.

Operational Noise

Methodology

Sound modeling of on-site Project and associated SCE improvements operations was conducted in accordance with ISO Standard 9613-2, Acoustics – Attenuation of Sound During Propagation Outdoors, Part 2: General Method of Calculation, implemented using Datakustik's CadnaA software application. The CadnaA model takes into account source sound power levels, surface reflection and absorption, atmospheric absorption, geometric divergence, meteorological conditions, walls, barriers, and berms. The Project area was modeled with a conservative ground factor of G = 0 to represent pavement. A temperature of 10°C with 70% relative humidity was used. No attenuation due to foliage was included.

Sound sources modeled for the Project were major producers of continuous-type noise generation, which include battery containers, PCSs, and main power transformers at the Project collector substation. While there may be other electrical transmission system components on site, such as breakers and buses, their noise emissions are—if any—sporadic and thus have no meaningful contribution to overall aggregate noise emission from the BESS facility during charging or discharging conditions. The following sound sources are included in the sound propagation model:

- **Battery energy storage containers:** The Project proposes to use Tesla Megapack 2 XL battery storage systems[9]. These battery storage containers are integrated with inverters. The primary sound source within the containers is operation of the thermal management system (i.e., the chiller and/or cooling fan[s]) and the inverter. Sound test results for the battery energy storage enclosures by octave band were provided from the manufacturer for a variety of operating conditions. The Project proposes to use the FN03 5-fan configuration at 80% fan duty cycle. This operating condition generates a sound power level of 91 dBA. This equipment operating at fan duty cycles of 80%, 70%, and 50% or less is not tonal. The equipment is tonal at fan duty cycles of 90% and 60%, which would not be used by the Project. The Project proposes installation of 136 potential battery energy storage containers on site.

9 The Tesla Megapack 2 XL battery storage systems are assumed for modeling purposes only, but models may change upon project buildout.

- **Substation transformers:** The Project utilizes one 128 mega volt-amp high voltage transformer. Based on the methodology outlined in the Electric Power Plant Environmental Noise Guide (Teplitzky et al. 1979), this would generate a sound power level of 100 dBA under full power with cooling fans operating (i.e., oil natural air force or ONAF conditions).
- **Medium voltage transformers:** The Project utilizes 34 4.8 mega volt-amp high voltage transformer. Based on the methodology outlined in the Electric Power Plant Environmental Noise Guide (Teplitzky et al. 1979), these would each generate a sound power level of 78 dBA under full power with cooling fans operating (i.e., oil natural air force or ONAF conditions).

Sound-sensitive uses in the vicinity of the Project site include multi-family residences located about 250 feet to the west and suburban residences located about 340 feet to the north. The Covina Senior Community Center is located about 600 feet to the northwest. All of these sensitive receptors are shielded from the site by intervening structures and the northern residences are also shielded behind a 5-foot 4-inch solid wall. Sound modeling included eight discrete off-site receivers. In addition, a grid of in-model receivers spaced 2 meters by 2 meters was set at a height of 1.5 meters (5 feet) aboveground, spanning the Project area and its immediate surroundings.

An 8-foot-high sound barrier is proposed as part of the Project, to be located around the facility. This barrier is included in the sound modeling results.

On-Site Operation Noise Assessment

The applicable sound limit at each receptor is shown in Table 3.13-5. The model results are presented graphically in Figure 3.13-2, Sound Modeling Results for Project Operations, and numerically in Table 3.13-6, compared to the applicable sound limit at each receptor. Table 3.13-6 compares Project operational sound levels to background sound levels at these locations. Note that the 5-fan equipment is not tonal at fan duty cycles of 80%, 70%, and 50% or less but is tonal at fan duty cycles of 90% and 60%. The Project would not operate at these tonal fan duty cycles.

Table 3.13-5. Modeled Project Operation Sound Levels Compared to Muni Code Limits

Model Receiver	Land Use	City Limit, Unadjusted		Quietest Hour, L_{eq} dBA		Tonal?	Ambient Adjustment?	Adjusted Limits, dBA	
		Day	Night	Day	Night			Day	Night
R1	Residential	60	50	50	46	No	No	60	50
R2	Residential	60	50	50	46	No	No	60	50
R3	Residential	60	50	50	46	No	No	60	50
R4	Residential	60	50	50	46	No	No	60	50
R5	Residential	60	50	50	46	No	No	60	50
R6	Residential	60	50	60	56	No	Yes	60	56
R7	Residential	60	50	60	56	No	Yes	60	56
R8	Senior Center	65	55	60	56	No	Yes	65	56

Notes: dBA = A-weighted decibel; L_{eq} = average noise level equivalent.

As indicated in Table 3.13-6, the sound level exposures at the nearest residences would be 45 to 52 dBA L_{eq} assuming continuous operation of the 80% fan-duty cycle conditions. At the senior center, the sound level exposure would be 46 dBA L_{eq}. As shown in Figure 3.13-2 and Table 3.13-6, the nearest sound sensitive locations are outside of the sound level limits given in Table 3.13-5 and would be similar to or below existing background sound levels (see Tables 3.13-1 and 3.13-5).

Table 3.13-6. Modeled Project Operation Sound Levels of 5-fan Configuration at 80% Fan Duty Cycle with 8-foot-high Barrier Compared to Muni Code Limits

Model Receiver	Land Use	Modeled Project Operational Noise Level, dBA L_{eq}	Adjusted Nighttime City Code Limit, dBA L_{eq}
R1	Residential	49	50
R2	Residential	49	50
R3	Residential	45	50
R4	Residential	47	50
R5	Residential	49	50
R6	Residential	49	56
R7	Residential	52	56
R8	Senior Center	46	56

Notes: dBA = A-weighted decibel; $L_{eq\ 1hr}$ = average noise level equivalent over a 1-hour period; L_{eq} = average noise level equivalent.

Operational sound levels would meet the City's adjusted noise limits. As a result, operational noise levels from the Project and associated SCE improvements would be **less than significant**.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Less than Significant Impact.

Methodology

Construction activity can result in varying degrees of ground vibration and ground-borne noise at local receptors, depending on the equipment and methods used, distance to the affected structures, and soil type. Caltrans has been assembling data for vibration and ground-borne noise levels generated by heavy construction equipment operation during the building of transportation projects for many years. The vibration and ground-borne noise levels from use of such equipment are representative for other types of construction efforts, not just transportation projects, and are therefore widely employed to assess vibration and ground-borne noise levels from heavy equipment use for any effort. According to Caltrans (2020), the most important equipment relative to generation of vibration and ground-borne noise, and the vibration levels produced by such equipment, is illustrated in Table 3.13-7.

Table 3.13-7. Vibration Velocities for Typical Construction Equipment

Equipment	PPV at 25 Feet (Inches Per Second)
Large Bulldozer	0.089
Loaded Trucks	0.076
Small Bulldozer	0.003

Source: Caltrans 2020.
Note: PPV = peak particle velocity; VdB = vibration decibel.

Ground-borne vibration attenuates rapidly, even over short distances. The attenuation of ground-borne vibration as it propagates from source to receptor through intervening soils and rock strata can be estimated with expressions found in Caltrans guidance (Caltrans 2020). The following equation is used to calculate PPV at any distance of interest from the operating construction equipment.

$$PPV_{rcvr} = PPV_{ref} * (25/D)^{1.1}$$

In the above equation, PPV_{rcvr} is the predicted vibration velocity at the receiver position, PPV_{ref} is the reference value at 25 feet from the vibration source (as listed in Table 3.13-7), and D is the actual horizontal distance to the receiver.

Vibration Assessment

The City does not have quantitative thresholds for construction vibration that would be applicable to the Project; therefore, it is appropriate to employ a numeric standard adopted by another agency. The California Department of Transportation (Caltrans 2020) establishes a construction-related damage limit of 0.25 in/sec PPV for historic and old buildings, 0.3 in/sec PPV for older residential structures, and 0.5 in/sec PPV for new residential and modern commercial/industrial structures. The applicable threshold for Project-attributed construction vibration would be 0.3 in/sec PPV at the closest residences and 0.5 in/sec PPV at the closest industrial building.

The closest residential structures to the Project site are located about 250 feet to the west, across Barranca Avenue and the closest non-residential structures adjoin both sites to the west, about 10 feet from the nearest construction. As shown in Table 3.13-3, the Project does not propose any pile drivers, vibratory rollers, or similar high vibration generating equipment. Using the vibration source level of construction equipment provided in Table 3.13-7, the distance to the closest structures, and the equation supplied in the Caltrans (2020) construction ground-borne vibration assessment methodology (above), the Project construction-related vibration levels were calculated as shown in Table 3.13-8.

Table 3.13-8. Construction Vibration Levels at Nearest Structures, inches per second

Equipment	PPV (in/sec) at Nearest Residencial Structure (250 feet)	PPV (in/sec) at Nearest Nonresidential Structure (10 feet)
Large Bulldozer	0.007	0.244
Loaded Trucks	0.006	0.208
Small Bulldozer	0.000	0.008

Note: PPV = peak particle velocity.
Source: Caltrans 2020.

As indicated in Table 3.13-8, Project construction and associated SCE improvements would result in vibration levels that are below the applicable significance thresholds at the closest sensitive receptors. This is a **less than significant** impact.

Operation Phase Vibration

Vibration impacts associated with industrial and commercial facility operations are limited to large-scale equipment with rotational components or involving repeated impact or "striking" movements (e.g., industrial-grade compressors, stamping machines, printing presses), or with the maneuvering of heavy trucks or similar large-scale material-transport equipment. The ongoing operation of the Project would not involve rotational equipment or impact equipment. Consequently, long-term operation of the Project would not be anticipated to generate perceptible vibration levels; operational vibration levels are therefore considered less than significant

c) ***For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?***

No Impact.

Bracket Field Airport is located about 5 miles east of the site and San Gabriel Valley Airport is located about 8.5 miles to the west of the site. There are no private or public airports within 2 miles of the site. There are no public or private airports within 2 miles of the Project site. Therefore, the Project would not expose people residing or working in the Project area to excessive noise levels**. No Impact.**

3.14 Population and Housing

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. POPULATION AND HOUSING – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less than Significant Impact. The Project and associated SCE improvements would not induce substantial population growth. It does not propose any housing or commercial development, nor does it propose any extension of roads or significant extension of infrastructure. No change in the City's population or housing would occur with Project implementation. During the temporary construction activities, the Project is expected to create approximately 40 construction jobs. Construction jobs would be short term and are expected to be filled primarily by the existing regional workforce, sourced from within the City and nearby cities. During operations, the proposed Project would typically be unmanned, apart from one or two workers visiting the facility in a light utility truck on a weekly basis. Additionally, on-site maintenance for replacement of equipment and miscellaneous electrical repairs would occur on an as-needed basis. Typically, one major maintenance inspection would take place annually. These occasional site visits would not create any permanent or substantial demand for housing, goods, or services in the area and would not induce substantial population growth in the County or surrounding communities. Therefore, impacts to population growth would be **less than significant**.

b) Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The Project and associated SCE improvements do not involve the development of housing, nor would it necessitate the removal of housing or the displacement of people. As such, the Project and associated SCE improvements would not displace any people or housing, and **no impact** would occur.

3.15 Public Services

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. PUBLIC SERVICES – Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	☐	☐	☒	☐
Police protection?	☐	☐	☐	☒
Schools?	☐	☐	☐	☒
Parks?	☐	☐	☐	☒
Other public facilities?	☐	☐	☐	☒

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

Fire protection?

Less than Significant Impact. The closest fire station to the Project site is LACoFD Station 154, located approximately 0.7 miles southwest of the Project site. The Project site contains existing industrial, commercial, and storage uses and already receives emergency and medical service from within the City. The associated SCE improvements would occur within the existing SCE Cortez Substation. Implementation of the Project would include construction of the BESS facility and on-site substation with a gen-tie line and a connector line. Upon completion of construction, the Project would be operated remotely and would not include habitable structures or increase demand for service so as to trigger the need for new or physically altered facilities.

The Project is required to adhere to the California Fire and Building Codes and would include multiple fire detection systems on site and within the individual BESS units, as detailed in Section 2.3 of this IS/MND. The Project and associated SCE improvements would be constructed in accordance with these regulations, which include standards for fire safety for battery storage facilities. Because the Project has a multi-layered approach to fire safety that includes protections from the battery cell, to the compartment, to the container and to the site level, it would be a rare event for a fire to occur at the site that could not be controlled by these features or by responding firefighters from nearby fire stations. As such, the Project and associated SCE improvements are not anticipated to substantially increase the potential for fire-related service calls, and would not create the need for new or expanded fire protection facilities. Impacts would be **less than significant.**

Police protection?

No Impact. The Project site is located approximately 0.5 miles southwest of the Covina Police Department and the existing uses, including the SCE Cortez Substation, already receive service from the City of Covina Police Department. Therefore, the Project site is adequately served with police protection. In addition, the Project would include security fencing and lighting, which are required for this Project to obtain insurance and operate. As previously discussed, upon completion of construction, the Project would be operated remotely and would not include habitable structures. Surveillance at the Project site would be provided by a video security system capable of continuous 24-hour monitoring and recording, as approved by the City's Chief of Police. The Project and associated SCE improvements would not cause an intensification of uses over existing conditions such that additional police services would be required. As such, the Project and associated SCE improvements would not create the need for new or expanded police protection facilities, and **no impact** would occur.

Schools?

No Impact. The City is served by the Covina Valley Unified School District. As discussed in Section 3.14, the Project and associated SCE improvements would not generate population growth. Accordingly, no new students would be generated, and no increase in demand for local schools would occur. As such, there would be **no impact.**

Parks?

No Impact. The Project and associated SCE improvements would not include development of residential or commercial uses or generate any new permanent residents or employees such that the demand for local park and recreational facilities would occur. As such, the Project would not result in the need for new or expanded park facilities, and there would be **no impact.**

Other public facilities?

No Impact. The Project and associated SCE improvements would not include the development of residential or commercial uses, and, therefore, would not increase the demand for other public facilities, such as libraries. Additionally, as described in Section 3.14, the Project would not result in indirect population growth, which could increase the demand for public facilities. There would be **no impact.**

3.16 Recreation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The nearest park to the Project site, Kelby Park, is located northwest of the Project site at 815 North Barranca Avenue. The Project and associated SCE improvements would not generate new or permanent residents that would increase the use of this park or other recreational facilities in the City.

Construction personnel working at the Project site could potentially use nearby parks or other recreational facilities during the temporary construction period. However, due to the temporary and finite duration of the construction activities, as well as the minimal number of personnel required, construction would not result in the introduction of new permanent workers to the City that would necessitate new parks or other recreational facilities. As determined herein, the Project would not have significant, adverse impacts to existing parks or other recreational facilities, and **no impact** would occur.

*b) **Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?***

No Impact. The Project and associated SCE improvements would not generate new permanent residents that would increase the demand for recreational facilities. As such, no new or expanded recreational facilities would be included as part of the Project or required as a result of the development of the Project. There would be **no impact.**

3.17 Transportation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRANSPORTATION – Would the project:				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

The analysis of Project impacts associated with transportation is primarily based on information contained in the Transportation Assessment prepared for the Project in November 2025 by Dudek and provided in Appendix J.

Existing Transportation Setting

Road Network

Access to the Project site would be from eastbound or westbound I-10 via the interchange with Citrus Avenue or Barranca Street to East Edna Place or from eastbound or westbound I-210 via the interchanges with Grand Avenue or Citrus Avenue to East Edna Place. A secondary access gate would be provided on the southern boundary of each site to allow for LACoFD access only in the event of an emergency. There are also designated City trucks routes near

the Project site, including Badillo Street (from Azusa Avenue on the west to Grand Avenue on the east), Barranca Avenue (from the southerly city limits to San Bernardino Road); Citrus Avenue (from the southerly city limits to Badillo Street and the northerly city limits to San Bernardino Road); Grand Avenue (from the southerly city limits to the northerly city limits) and San Bernardino Road (from the westerly city limits to Grand Avenue on the east) (City of Covina 2024).

Existing Transit, Bicycle, and Pedestrian Facilities

Transit service in Covina is provided by Foothill Transit and Metrolink. Foothill Transit provides fixed bus routes while Metrolink is a commuter train connecting riders to Union Station in downtown Los Angeles. The City of Covina also provides a Dial-A-Ride service for residents who are 60 years of age or older within city boundaries and to local medical and government offices within a 3-mile radius of Covina. Routes 281 and 488 and the San Bernardino Metrolink line are the closest transit routes to the Project site.

Route 281 connects Glendora to the north to Puente Hills Mall to the south (Foothill Transit 2024). The nearest bus stop is located near the intersection of 2nd Avenue and San Bernardino Road, approximately 0.5 miles southwest of the Project site and serves Route 281. Route 488 connects Glendora to El Monte (Foothill Transit 2024). The nearest bus stop for Route 488 is located at the intersection of Grand Avenue and San Bernardino Road, approximately 0.5 miles southeast of the Project site.

The San Bernardino Route connects San Bernardino to downtown Los Angeles (Metrolink 2025). The nearest Metrolink station for the San Bernardino route is located near Citrus Avenue and Front Street, approximately 0.5 miles southwest of the Project site.

The Project site is primarily surrounded by a mix of general industrial and residential uses with limited bicycle infrastructure provided. Sidewalks are provided along Barranca Avenue and along some portions of East Edna Place. There are no sidewalks along the Project frontage.

a) Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less than Significant Impact. The Project and associated SCE improvements would not conflict with applicable programs, plans, ordinances, or policies addressing the circulation system, as further discussed below. This includes the City's Circulation Element, City of Covina Bicycle Master Plan, and the existing and proposed roadway, pedestrian, bicycle, and transit facilities and services in the study area.

City of Covina General Plan Circulation Element

The City of Covina General Plan Circulation Element (City of Covina 2000) is a comprehensive plan that guides mobility decisions in the City to provide for adequate, safe circulation and transportation networks and facilities that meet present and future growth-generated needs at an affordable economic and social cost. These networks/facilities include freeways and surface streets for automobiles, trucks, buses, and bicycles, rail lines, and pedestrian routes. The Circulation Element includes one circulation goal, as follows:

Goal 1: A well balanced infrastructure system and related circulation network that provide functional, viable, safe, efficient, economical, and attractive transportation, movement, and transmission and

applicable services for current and future Covina residents, employers, workers, business patrons and service recipients, visitors, and passers-by.

In addition, the Circulation Element contains numerous policies categorized within six topical areas, including:

- Maintenance and improvement of public rights-of-way and related infrastructure to accommodate future growth;
- Public transit and transportation programs;
- Downtown Covina;
- Sewer, storm drainage, and public utilities and related systems;
- General circulation and infrastructure matters; and
- Funding

City of Covina Bicycle Master Plan

The City of Covina Bicycle Master Plan (City of Covina 2011) provides a broad vision of actions and strategies to improve conditions for bicycling in the City and the surrounding region. The Bicycle Master Plan recommends improvements and policies to increase the bicycling population; increase cyclists' trip frequency and distance; improve bicyclist, pedestrian and motorist safety; and increase public awareness and support for bicycling. In terms of infrastructure, the Bicycle Master Plan provides direction for expanding the City's existing bikeway network and integrating the system into the surrounding countywide bikeway and public transit network. The system-wide approach for connecting gaps is intended to ensure greater local and regional connectivity. In addition to providing recommendations and design guidelines for bikeways and support facilities, the Bicycle Master Plan offers recommendations for education, encouragement, enforcement, and evaluation programs.

Impact Analysis

Construction

The Project and associated SCE improvements would result in a temporary, short-term increase in traffic during construction. This includes construction workers driving to and from the Project site and the delivery of construction equipment and hauling trips as needed.

Construction of the Project would occur over an approximately 14-month period anticipated to start in 2025. It is anticipated that the highest volumes of construction-related traffic would occur over a 3-month period, when multiple phases of Project construction would occur concurrently. This includes phases for the Collector Substation installation, Battery/Container installation, and the Gen-tie installation.

The trip generation estimates during the peak construction period are summarized Table 3.17-1. To account for the larger sizes of construction-related trucks relative to construction worker passenger vehicles, passenger car equivalent (PCE) factors were applied to the trip generation estimates. A 1.0 PCE factor was applied to passenger vehicles, a 2.0 PCE factor was applied to vendor trucks, and a 3.0 PCE factor was applied to haul trucks.

Table 3.17-1. Peak Period of Construction Trip Generation Estimates

Vehicle Type	Daily Quantity		Daily Trips	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Non-PCE Adjusted Trip Generation									
Construction Workers[1]	31	workers	62	31	0	31	0	31	31
Vendor Trucks[2]	11	trucks	22	3	3	6	3	3	6
Haul Trucks[2]	4	trucks	8	1	1	2	1	1	2
Peak Trip Total (Non-PCE)			**92**	**35**	**4**	**39**	**4**	**35**	**39**
PCE Adjusted Trip Generation									
Construction Workers	31	workers	62	31	0	31	0	31	31
Vendor Trucks[3]	11	trucks	44	6	6	12	6	6	12
Haul Trucks[3]	4	trucks	24	3	3	6	3	3	6
Peak Trip Total (PCE)			**130**	**40**	**9**	**49**	**9**	**40**	**49**

Notes: PCE = Passenger car equivalent.

1 Conservatively assumes all construction workers arrive in the AM peak hour and depart the site in the PM peak hour.

2 Vendor and Haul trucks are assumed to arrive and depart the site evenly throughout the workday.

3 A 2.0 PCE factor was applied to vendor trucks and a 3.0 PCE factor was applied to haul trucks.

As shown in Table 3.17-1, the peak period of construction would generate approximately 92 daily trips, 39 AM peak hour trips, and 39 PM peak hour trips. With the application of PCE factors, the peak period of construction for the Project would generate approximately 130 daily trips, 49 AM peak hour trips and 49 PM peak hour trips. For all other phases of construction, the amount of vehicular traffic is estimated to be less than the peak period. All construction-related traffic would be temporary and short term and would end upon completion of the Project's construction period.

Access to the Project site would be from eastbound or westbound I-10 via the interchange with Citrus Avenue or Barranca Street to East Edna Place or from eastbound or westbound I-210 via the interchanges with Grand Avenue or Citrus Avenue to East Edna Place. Based on the Project trip generation presented in Table 3.17-1, it is assumed only two heavy haul trips would occur during peak hours. Given the negligible increase in Project-related construction traffic, no impacts to the surrounding roadways are anticipated. All construction would occur on site, therefore, there would also be no impact to the existing pedestrian, bicycle, and transit facilities and services in the area.

The Circulation Element details existing roadway, pedestrian, bicycle, and transit facilities as well as policies to implement enhanced facilities throughout the City. Likewise, the City's Bicycle Master Plan, describes the City's existing bicycle infrastructure, identifies recommended network improvements, and provides strategies to improve conditions for bicycling in the City. While there would be a temporary increase in traffic during the construction period, no changes would be made to the policies detailed in the Circulation Element or the strategies identified in the Bicycle Master Plan. The Project would not permanently alter the existing circulation system and would not substantially conflict with the City's goal of providing a well-balanced infrastructure system and related circulation network. Therefore, the implementation of the Project would not conflict with a program, plan, ordinance, or policy related to the circulation system, including roadways, transit, bicycle, and pedestrian facilities. Construction of the Project would result in less than significant impacts to the existing circulation system.

Operations

Once constructed, the Project would be operated remotely through the SCADA system and occasionally, on-site maintenance would be required. It is expected that the fully developed Project would require one or two workers to visit the facility on a weekly basis. The number of permanent trips (4 daily trips or less) associated with the Project operations is not expected to impact the study area roadway network and can reasonably be assumed to result in less operational traffic than under existing conditions. The roadway conditions in the Project vicinity would not substantially differ from existing conditions during the operations and maintenance phase. Activities associated with long-term operations and maintenance would, therefore, be minimal.

Furthermore, the Project and associated SCE improvements would not include site improvements that would interfere with the use of the existing roadway network, public transit, bicycle, or pedestrian facilities, or impede the construction of new or the expansion of existing transportation facilities in the future. Bicyclist and pedestrian safety would be maintained at existing levels in the area. The Project and associated SCE improvements would also not severely delay, impact, or reduce the service level of transit in the area. Therefore, Project operations would not conflict with the circulation policies within the City's General Plan Circulation Element or Bicycle Master Plan. Impacts would be **less than significant**.

b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Less than Significant Impact. CEQA Guidelines Section 15064.3(b) focuses on VMT for determining the significance of transportation impacts. In accordance with Senate Bill 743, the City developed Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (City of Covina 2020) for the purposes of analyzing transportation impacts under CEQA. The City's Guidelines identify screening criteria, project baselines and thresholds of significance to determine when a project would have a significant transportation impact.

Impact Analysis

Construction

Based on SB 743 and the revised CEQA guidelines, the City's Guidelines, and the San Gabriel Valley Council of Governments VMT Assessment tool, the Project and associated SCE improvements would be screened from a project-level VMT analysis. Specifically, the Project is located in a Low VMT generating area. Therefore, a VMT analysis would not be required and impacts to VMT can be presumed to be **less than significant**. Furthermore, construction related trips generated by the Project and associated SCE improvements would be temporary in nature and limited to the duration of construction.

Operations

As noted above, the Project would be screened from a project-level VMT analysis due to its location in a Low VMT generating area. Furthermore, the Project would reduce vehicle traffic compared to the existing baseline conditions due to the demolition of the existing active commercial, manufacturing, and light industrial uses on-site. Therefore, the Project and associated SCE improvements are screened from conducting a VMT analysis and impacts during operations are presumed to be **less than significant**.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less than Significant Impact. The Project site is located in an established, developed area with direct access to designated regional and local truck routes (I-10, I-210, Badillo Street, Barranca Avenue, Citrus Avenue, Grand Avenue, and San Bernardino Road). Transportation and haul permits would be required from Caltrans and the City for construction truck traffic. The Project and associated SCE improvements would not introduce uses (types of vehicles) that are incompatible with existing uses already served by the area's road system during either construction or operations. There would be no permanent changes to the existing circulation on City roads. All access driveways would be perpendicular to existing roads, are not located near sharp curves or steep grades, and would not cause hazards due to a geometric design feature. Therefore, impacts associated with hazardous design features or incompatible land uses would be **less than significant**.

d) Would the project result in inadequate emergency access?

Less than Significant Impact. The Project is located in an established, developed area with sufficient access for emergency service providers. Project construction would occur entirely on site with no planned lane closures. Construction of the proposed Project and associated SCE improvements would also conform to all LACoFD requirements. Driveways from East Edna Place connecting to the Project site along with internal roads would be constructed to allow fire and maintenance vehicle access. In addition, a secondary access gate would be provided on the southern boundary of each site to allow for LACoFD access only in the event of an emergency. All internal access roads within the Project site would be up to 26 feet wide and cleared, graded, and compacted. The proposed SCE improvements would occur within the existing SCE Cortez Substation with established access, and no modifications to surrounding circulation patterns would be required. Therefore, neither Project construction nor Project operations, including SCE improvements, would result in inadequate emergency access. Impacts would be **less than significant**.

3.18 Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	☒	☐	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

The analysis of the Project's impact on tribal cultural resources is primarily based on information contained in the Cultural Resources Inventory and Evaluation Report prepared in August 2025 by Dudek and provided in Appendix C-2 of this IS/MND.

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

Less than Significant with Mitigation Incorporated. As previously discussed in Section 3.5, a California Historical Resources Information System records search, an archival information and literature review, correspondence with the Native American Heritage Commission, and a cultural resources pedestrian survey were conducted for the Project.

An archaeological records search was conducted in order to identify any previously recorded cultural resources that may be located within or near the Project site or the immediate vicinity. According to the records search results, four previously recorded resources were documented within the 1-mile radius, one of which intersects the eastern site of the Project site. The resource is the Mojave Road, which originally was utilized as a prehistoric trail used by Native Americans.

The review of historical aerial photographs and maps revealed that the entire Project site, including the SCE Cortez Substation, has undergone ground-disturbing activities in the past due to grading operations for existing industrial and utility uses and prior agricultural uses. The Project site has been developed with the current structures and parking lot since at least 1964. The SCE Cortez Substation has also been present since at least 1964. Prior to its development, the Project site was used for agriculture, specifically as an orchard. Any intact archaeological resources or Tribal Cultural Resources (TCRs) that may have been previously located in the area were likely disturbed by these past construction activities.

The results from the 2025 NAHC Sacred Lands File (SLF) search were received on March 7, 2025, with negative findings. Pursuant to the requirements of AB 52, the City sent letters regarding the proposed Project and requests for consultation on September 30, 2025.

Given the potential for buried TCRs, Mitigation Measure TCR-1 has been included to retain a Native American monitor from or approved by Kizh Nation prior to the commencement of ground-disturbing activities. Mitigation Measures TCR-2 and TCR-3 include language regarding the inadvertent discovery of TCR objects and human remains and associated funerary or ceremonial objects. Coordination with Kizh Nation regarding cultural resources discoveries and documents would ensure proper treatment of TCRs and minimize potential impacts to resources. Therefore, with implementation of Mitigation Measures TCR-1, TCR-2, and TCR-3, impacts to TCRs would be less than significant.

Further, no specific TCRs have been identified by California Native American tribes as part of the City's Assembly Bill (AB) 52 notification and consultation process. Therefore, the proposed Project and associated SCE improvements would not adversely affect TCRs that are listed or eligible for listing in the state or local register. As such, impacts would be **less than significant with mitigation incorporated**.

b) ***A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.***

Less than Significant with Mitigation Incorporated. As discussed above, to avoid potential adverse effects to TCRs, Mitigation Measures TCR-1, TCR-2, and TCR-3 have been included to require coordination with the Kizh Nation to avoid potential impacts to buried resources that may be unearthed during Project-related ground-disturbing construction activities. There are no resources in the Project area that have been determined by the lead agency to be significant pursuant to the criteria set forth in Public Resources Code Section 5024.1. Further, no specific TCRs were identified in the Project area by the NAHC, by California Native American tribes, or by the City as part of the AB 52 notification and consultation process. Therefore, with implementation of Mitigation Measures TCR-1, TCR-2, and TCR-3, impacts to TCRs would be less than significant.

Mitigation Measure TCR-1: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities

A. Prior to ground-disturbing activities, the project applicant shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. "Ground disturbing activity" includes demolition, pavement removal, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor

logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.

Mitigation Measure TCR-2: Unanticipated Discovery of Tribal Cultural Resource Objects (Non-Funerary/ Non-Ceremonial).

A. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

Mitigation Measure TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects

A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.

B. If Native American human remains and/or grave goods are discovered or recognized on the project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed.

C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).

D. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods.

E. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

3.19 Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Require or result in the relocation or construction of new or expanded water, waste water treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the waste water treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a) Would the project require or result in the relocation or construction of new or expanded water, waste water treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less than Significant Impact. The existing uses at the Project site, including the SCE Cortez Substation, are adequately served by existing natural gas, electrical, telecommunication, water, and wastewater facilities. Water consumption during construction would be required for dust suppression and earthwork. Construction and operational water use would be provided by existing water line, or through off-site source delivered by truck. There would be no demand for potable water because there would be no habitable structures on site. During operation, the Project would use water for the occasional watering needs of the landscaping proposed along the Project site frontage along East Edna Place. However, the total irrigation requirements of the Project's proposed landscaping features would be minimal. The Project will include five new fire hydrants including two at the west site and three at the east site. The fire hydrants are being

included to meet LACoFD requirements. The fire hydrants will require installation of up to five new water services lines. Use of the fire hydrants would be limited to emergency events and would not result in an increase in water demand, The Project and associated SCE improvements would not result in an increase of water demands compared to existing on-site uses, and impacts would be less than significant.

The Project and associated SCE improvements would not generate domestic wastewater because no habitable structures, restrooms, bathrooms, toilets, or kitchen facilities would be constructed. Therefore, no wastewater treatment is required that may exceed Regional Water Quality Control Board standards, and the Project would not require or result in the relocation or construction of new or expanded wastewater treatment facilities. Impacts would be less than significant.

The Project and associated SCE improvements would not require natural gas or propane; however, minor amounts of electricity would be used for construction and ongoing maintenance operations during the Project's lifespan. The electricity needs for the Project would be provided by backfeed from the BESS or electrical grid, through the Project gen-tie line. The Project and associated SCE improvements would not require or result in the relocation or construction of new or expanded electric power or natural gas facilities; therefore, impacts would be less than significant. In fact, the Project, with its batteries and electrical tie in at the SCE Cortez Substation, would enhance the reliability of the electrical grid that is increasingly reliant upon renewable energy to assure that other sites in the City and region continue to have adequate electrical utility service. The Project and associated SCE improvements would not require or result in the relocation or construction of new or expanded telecommunications facilities. As such, impacts would be **less than significant.**

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less than Significant Impact. The Project would require minimal water supply during construction activities, primarily for dust suppression. During operation, the Project and associated SCE improvements would not require water, aside from occasional watering needs of the landscaping proposed along the Project site frontage along East Edna Place. However, the total irrigation requirements of the Project's proposed landscaping features would be minimal. Although the Project was not included in the District's water demand projections, it is anticipated that the water demand for the Project and associated SCE improvements would not exceed the historical use and would essentially not increase the overall demand on the water system. Therefore, sufficient water supplies are available to serve the Project and associated SCE improvements and reasonably foreseeable future development during normal, dry, and multiple dry years; therefore, impacts would be **less than significant.**

c) Would the project result in a determination by the waste water treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

No Impact. The Project and associated SCE improvements would not result in the generation of wastewater or require any wastewater treatment services. As such, there would be **no impact.**

d) Would the project generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less than Significant Impact. Solid waste generated by employees and other on-site activities during long-term Project activities (i.e., equipment replacement and vegetation management) would be minimal because workers would only be on the Project site periodically for maintenance. The long-term solid waste stream would not be large enough to require any measurable landfill capacity. In general, the BESS would be recycled at the expiration of the Project's life (30 years). Most parts of the proposed system are recyclable. Batteries include lithium-ion, which degrades but can be recycled or repurposed. Site structures would include steel or wood and concrete. All of these materials can be recycled. Concrete from deconstruction would be recycled. Metal and scrap equipment and parts that do not have free-flowing oil may be sent for salvage. The Project and associated SCE improvements would comply with federal, state, and local statutes on the regulation of solid waste disposal and would participate in available industry recycling programs. Impacts would be limited and temporary during construction and decommissioning and are considered **less than significant.**

e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less than Significant Impact. The Project and associated SCE improvements would comply with federal, state, and local statutes and regulations governing solid waste disposal during construction, operation, and decommissioning. Construction waste would be recycled or disposed of in accordance with all existing regulations, including Section 8.09.040 of the City's Municipal Code, which requires recycling of at least 75% of construction materials that require disposal. Therefore, the impacts would be **less than significant.**

3.20 Wildfire

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

a) Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. According to the State Responsibility Area map from the California Department of Forestry and Fire Protection, the Project site is not located within or adjacent to an FHSZ (CAL FIRE 2024). Within the City, fire protection services are provided by the LACoFD. The closest fire station to the Project site is LACoFD Station 154, located approximately 0.7 miles southwest of the Project site. The Project would comply with regulations relating to emergency access, water supply, and defensible space specified in the Covina Fire Code (Covina Municipal Code Chapter 14.12), which adopts by reference the 2022 California Fire Code, as enforced by LACoFD.

Access to the Project site would be from the paved road on East Edna Place, and the Project would not include any changes to existing public roadways that provide emergency access to the site. In addition, a secondary access gate would be provided on the southern boundary of each site to allow for LACoFD access only in the event of an emergency. As discussed in Section 3.9(f), City of Covina's General Plan includes a Safety Element (Chapter 5), that identifies potential City-specific hazards that could occur, risk assessment for each type of identified hazard, goals, policies, and emergency preparedness and response procedures, and the Project would be required to comply with applicable aspects of the Safety Element. The City of Covina's Emergency Plan includes a structure for the City to respond to emergencies and natural disasters and puts in place working relationships and mutual aid agreements with other nearby cities, Los Angeles County, and the State of California. According to the General Plan, LACoFD coordinates local emergency preparedness activities, and all major public streets serve as principal evacuation routes. This ERP will include procedures for emergency response personnel in the event of equipment malfunction or failure and will also include communication procedures and safety measures for response personnel and surrounding residents to ensure safety during these types of emergency events. The ERP will be prepared when the specific battery technology is determined for the Project. The ERP will be submitted to LACoFD for review and approval prior to Project operations in accordance with state law.

The proposed SCE improvements would occur within the existing Cortez Substation, which already has established emergency access, and no modifications to surrounding circulation patterns would be required. Construction, operation, and decommissioning of the Project, as well as associated SCE improvements,

would not require closure of adjoining roads, nor would it increase traffic such that emergency response or evacuation would be impacted, as construction equipment would remain on site, and operation does not require continuous occupation of the site. Access for operational, fire department, and emergency vehicles to the facility would comply with City regulations. Therefore, the Project and associated SCE improvements would not substantially impair an adopted emergency response or evacuation plan and **no impacts** related to wildfire would occur.

b) Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. As noted above, the Project site is not located within a FHSZ. The nearest FHSZ is a Local Responsibility Area Very High FHSZ, located at the base of the San Jose Hills, approximately 1.4 miles southeast of the Project site. The nearest SRA Very High FHSZ is also located within the San Jose Hills, approximately 2 miles southeast. In addition, the Project site is located within a developed portion of the City and is surrounded by other industrial and commercial uses, and the associated SCE improvements would occur within areas previously disturbed and occupied by existing electrical facilities. The Project site contains no existing vegetation and is unlikely to support flammable wildland vegetation. The topography of the Project location is flat and is not located near any terrain that is typically associated with wildfire spread, such as steep slopes. As such, it is not anticipated that the Project and associated SCE improvements, due to slope, prevailing winds, and other factors, would exacerbate wildfire risks or expose future occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Thus, the Project and associated SCE improvements would not expose people or structures to significant risk involving wildland fires, exacerbate wildfire risks, or otherwise result in wildfire-related impacts. Therefore, **no impacts** associated with wildfire would occur.

c) Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less than Significant Impact. The Project proposes development of an energy storage facility which would be operated remotely with no permanent on-site operations and maintenance personnel, and no occupied buildings or habitable structures. The batteries selected for the Project will use lithium-ion cell technology. The batteries would be subject to compliance with existing federal, state, and local regulations for health and safety, including the 2022 California Fire Code. The Project proponent would select batteries providers that comply with the application-specific codes, standards, and regulations for the siting, construction, and operation of lithium-ion stationary ESS. Additionally, a gen-tie line would be installed for the Project to allow interconnection to the adjacent SCE Cortez Substation. In order to facilitate operation of the Project, SCE would make improvements to the SCE Cortez Substation to accommodate new equipment. SCE's improvements would occur within areas previously disturbed and occupied by existing electrical facilities.

The BESS would use batteries, which contain flammable and corrosive liquid materials. However, during charging, discharging, and normal operations, the batteries would not release any flammable gases. The potential for hazardous materials to be released during an accidental breakage of the batteries does exist, but the risk is minimized by the design of the system and compliance with applicable codes and industry standards. The batteries would be housed in multiple self-contained, prefabricated storage system

enclosure units. Each battery energy storage enclosure would have insulation, a module cooling system, a battery management system, fire detection equipment, PCS equipment containing the electronic controls, inverters, and a medium voltage step-up transformer. Project operations would be monitored remotely through the SCADA system that would be housed in an enclosure adjacent to the Project substation. All batteries within the BESS would be contained within specifications that adhere to applicable federal, state, and local requirements, including the inclusion of appropriate ventilation, acid-resistant materials, and the presence of spill protection supplies. Enclosures used to store hazardous materials would also be inspected regularly for any signs of failure or leakage. Additionally, four fire command stations would be installed adjacent to exterior access gates on the north and south sides of the west and east sites only to be used by LACoFD in the event of an emergency.

In the unlikely event of a battery cell malfunction, such as a thermal runaway event, a fire could occur. While current systems are designed to contain fires within a single battery module, if a fire does occur, pollutants could be emitted into the atmosphere. Battery system fires are generally considered Class A (plastics fires, from materials such as the separator) and Class B (flammable liquids, from materials such as the electrolyte) but may also have characteristics of Class C (electrical fires) as well. As such, the pollutants generated are not dissimilar from other common residential and commercial fires.

As noted previously, the Project site is not located within a FHSZ (CAL FIRE 2024). The nearest fire hazard severity zones are Local Responsibility Area High FHSZs, located at the base of the San Jose Hills, approximately 1.40 miles southeast. In addition, the Project site is located within a developed portion of the city and is surrounded by other industrial, commercial, and residential uses. Further, the Project site contains no existing vegetation and is unlikely to contain suitable habitat to support listed species. The Project would comply with all fire clearance requirements for vegetation.

Because the Project has a multi-layered approach to fire safety that includes protections from the battery cell, to the compartment, to the container and to the site level, it would be a rare event for a fire to occur at the site that could not be controlled by these features or by responding firefighters from nearby fire stations. The nearest undeveloped areas are approximately 1.4 miles southeast and 2 miles northeast from the facility. The likelihood of a facility fire escaping and igniting vegetation is considered extremely low due to the protections and setbacks, and there would be no Project occupants as it is an unmanned facility. Additionally, existing regulations control the conditions under which the energy storage (battery) component can operate. The installation of the above-ground gen-tie line and the underground fiber optic cables (to be installed as part of an upgrade to the telecommunications facilities at the Cortez Substation) would also follow the 2022 California Fire Code and not exacerbate fire risk due to the Project's location within an urban area.

In compliance with SB 38 and General Order 167, and as required by the City's Zoning Code, commercial battery energy storage system projects are required to prepare site-specific ERPs including procedures for emergency response personnel in the event of equipment malfunction or failure, including communication procedures and safety measures for response personnel and surrounding residents to ensure safety during these types of emergency events. The ERP will be submitted to LACoFD for review and approval prior to Project operations in accordance with state law. The Project site is directly north of an existing Metrolink rail. The ERP is anticipated to address potential impacts to the Metrolink rail in the event of an emergency situation.

A project-specific HMA (Appendix A-2) was prepared to evaluate potential fire, explosion, and hazardous materials risks associated with the proposed battery energy storage system. The HMA evaluated credible failure scenarios using UL 9540A fire test data and applicable fire code performance criteria and concluded that the system's design features would prevent uncontrolled fire or explosion conditions and would not expose the public or emergency responders to substantial safety hazards.

Therefore, because the potential for a wildfire ignition caused by the facility's operations is considered an extremely rare event, the absence of Project occupants, regulations, and location within an urban environment, the potential for impacts would be **less than significant**.

d) ***Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?***

No Impact. As mentioned previously, the California Department of Forestry and Fire Protection State Responsibility Area map shows that the Project site is not located within a FHSZ. The nearest fire hazard severity zones are Local Responsibility Area Very High FHSZs, located at the base of the San Jose Hills, approximately 1.4 miles southeast. The nearest SRA Very High FHSZ is also located within the San Jose Hills, approximately 2 miles southeast. As discussed in Section 3.7, Geology and Soils, the Project and associated SCE improvements would not result in significant risks associated with flooding, landslides, runoff, or drainage changes. The Project site is located within a developed portion of the City that is not susceptible to wildland fires due to its considerable distance from open natural areas, and both the Project site and the surrounding area are predominantly flat. As such, risks related to post-fire slope instability and potential landslides are negligible, and the Project and associated SCE improvements would not expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire instability, or drainage changes. Therefore, **no impacts** associated with wildfire would occur.

3.21 Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☐	☒	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

a) ***Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?***

Less than Significant Impact with Mitigation Incorporated. As discussed in Section 3.4 of this IS/MND, the Project site is located in a developed and urbanized community and is not expected to support sensitive vegetation, sensitive wildlife, or sensitive habitat. However, there could be potential for migratory birds in adjacent areas, which are protected under Sections 3503, 3503.5, and 3513 of the Fish and Game Code and under the Migratory Bird Treaty Act, and standard protections for nesting bird species would need to be incorporated into the Project (USFWS 2025a). Construction activities would elevate noise levels and could cause disturbance to protected bird species nesting in adjacent areas. Should construction occur during breeding, reproduction, or juvenile nesting periods for nesting birds and raptors (i.e., between February 15 and August 31), construction would have the potential to disturb nesting birds or raptor species in adjacent areas. However, the Project would be required to comply with the MBTA, which includes standard protections for nesting bird species. Compliance with the MBTA would ensure that potential impacts to nesting birds would be minimized and, therefore, impacts would be **less than significant.**

As described in Section 3.5 of this IS/MND, the Project site does not support any known important examples of major periods in California history or prehistory. The SCE Cortez Substation and on-site building at the Project site are not eligible for historic designation under national, state, or local designation criteria. The Project, however, would include ground disturbance that could result in the inadvertent discovery of sub-surface archaeological resources or human remains. In the unlikely event that archaeological resources, tribal cultural resources, or human remains were to be discovered during ground disturbing activities associated with the Project, the mitigation measures (MM-CUL-1 and MM-CUL-2) outlined in Section 3.5 of this IS/MND would be implemented to ensure proper identification and treatment of inadvertent discoveries and potential impacts would be minimized. Additionally, the Project would be

required to comply with Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98, which includes standard protections if human remains or suspected human remains are discovered. As such, the Project would not eliminate important examples of the major periods of California history or prehistory, and impacts would be **less than significant with mitigation incorporated**.

b) ***Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)***

Less than Significant Impact with Mitigation Incorporated. Cumulative impacts are an evaluation of a proposed project's potential impact combined with other related projects' impacts. Related projects are projects that are within the area surrounding the proposed Project site that are recently developed, currently in progress or proposed for the future that, when considered with the proposed Project, could potentially result in cumulative environmental impacts. Information on past, present, and reasonably foreseeable future projects within the City of Covina was obtained from the City. The list includes residential projects recently developed within 200 feet of the Project site which were evaluated as sensitive residential receptors in the Air Quality Technical Memorandum (Appendix A-1) and Noise and Vibration Assessment (Appendix I).

Cumulative localized impacts would potentially occur if a construction project were to occur concurrently with another off-site project. Construction schedules for potential future projects near the Project site are currently unknown; therefore, potential construction impacts associated with two or more simultaneous projects would be speculative. However, even if other projects in the nearby vicinity were constructed concurrently with the Project, they would similarly be required to comply with all such applicable federal, state and local requirements and regulations, to be consistent with the provisions set forth by CEQA and the CEQA Guidelines, and to implement all feasible mitigation measures should a significant project-related and/or cumulative impact be identified. Therefore, future proposed projects would require an air quality analysis and, where necessary, mitigation if the future proposed project would exceed SCAQMD's significance thresholds. Criteria air pollutant emissions associated with construction activity of future proposed projects would be reduced through implementation of control measures required by SCAQMD. Cumulative PM10 and PM2.5 emissions would be reduced because all future projects would be subject to SCAQMD Rule 403 (Fugitive Dust), which sets forth general and specific requirements for all construction sites in the SCAQMD. Noise is a localized phenomenon that dissipates with distance and is affected by topography and intervening structures. Hence, noise due to construction or operation of other projects would not meaningfully combine with development under the project to produce a cumulative noise effect. This IS/MND concluded that impacts to cultural resources, tribal cultural resources, and paleontological resources could be reduced to less than significant after mitigation measures are incorporated. All other issue areas will not result in a significant cumulative impact or require mitigation.

The nature of battery energy storage projects is to provide local energy storage serving the surrounding community. As such, there is finite demand for such facilities to be located within the same geographic area such that there would not be a proliferation of such facilities in the same place. Therefore, battery projects that do not result in significant project-level impacts would also typically not have the potential for cumulatively significant impacts when considered together with associated SCE improvements and other existing or potential battery energy storage projects or comparable substation improvements in the

surrounding area. Additionally, even if other battery storage projects were located in the same place, such other projects would be required to comply with the same applicable federal, state, and local regulatory requirements that prevent battery storage projects from having a significant impact to further ensure that their potentially cumulative impacts would not rise to significant levels. As detailed in the above discussions, the Project would not result in any significant and unavoidable impacts in any environmental categories. In all cases, the impacts associated with the Project are limited to the Project site and would not result in a significant contribution to any cumulative impacts. Therefore, based on the analysis contained in this IS/MND, the Project would not result in a Mandatory Finding of Significance due to cumulative impacts. Impacts would be **less than significant with mitigation**.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than Significant Impact. As demonstrated in the analysis in this document, construction and operation of the Project and associated SCE improvements do not have the potential to generate significant adverse impacts on human beings and no mitigation would be required for the topical issues related to human health, including air quality, hazards and hazardous materials, hydrology and water quality, or noise. As such, the effects on human beings as a result of the proposed Project and associated SCE improvements would be **less than significant.**

Appendix A-1

Air Quality Technical Memorandum

MEMORANDUM

To:	Kimberly Comacho, Covina Reliability Project, LLC
From:	Adam Poll, Dudek
Subject:	Covina Reliability Project Air Quality Technical Memorandum
Date:	December 17, 2025
cc:	Elora Babbini, Dudek
Attachment:	Attachment A – CalEEMod Emissions Outputs

Dudek is pleased to present Covina Reliability Project, LLC (Applicant) with the following air quality analysis for the proposed Covina Reliability Project (Project) located within the City of Covina (City). The Project proposes the development of an approximately 110-megawatt (MW)/440 MW-hour battery energy storage system (BESS) facility.

This memorandum estimates criteria air pollutant emissions and impacts from construction and operation of the Project in accordance with the California Environmental Quality Act (CEQA) Guidelines. As further described below, the memorandum confirms that the Project will not result in significant air quality impacts based on the applicable thresholds of significance.

1 Project Description

The Project is designed to charge or discharge electricity to and from the grid via BESS with associated on-site support components consisting of battery enclosures, inverters, collector lines, fencing, access roads, supervisory control, a Supervisory Control and Data Acquisition (SCADA) system, and other ancillary facilities or equipment. The Project would also include an on-site Project substation on the west site that will allow interconnection to the adjacent SCE Cortez Substation via an overhead gen-tie line.

Utilizing similar battery technology used in electric vehicles, the Project would provide additional capacity to the electrical grid to assist with serving load during periods of peak demand by charging when demand is low and discharging when demand is high. This accommodates the integration of additional intermittent renewables such as wind and solar and reduces the need to operate natural gas power plants. The Project would also serve as an additional local capacity resource that would enhance grid reliability.

The Project is expected to create approximately 40 jobs during construction, many of which can be sourced from the City and adjacent cities. The Project would be operated remotely, with weekly visits by one to two workers in a light utility truck for routine inspections. Periodic on-site maintenance, including occasional equipment replacement and electrical repairs, would be performed as needed by regional employees and contractors.

Battery Energy Storage System

The Project would include placement of battery energy storage enclosures and associated electrical equipment, including medium voltage transformers and power conversation systems. Each unit consists of a storage enclosure/non-occupiable steel cabinet that houses battery modules and power conversion system equipment. The battery storage units are prefabricated off site and would arrive to the site fully assembled and ready to be installed

and operated. The actual number of energy storage enclosures and types are approximate and subject to change based on available battery technology at the time of construction. Each battery energy storage enclosure would have insulation, a module cooling system, a battery management system, fire detection equipment, power conversion system (PCS) equipment containing the electronic controls, inverters, and a medium voltage step-up transformer. The primary storage components would consist of self-contained electrochemical battery systems using conventional storage technologies with proven safety and performance records. The BESS enclosures would be designed such that the periodic maintenance and replacement of underperforming battery components can be easily performed on an as-needed basis without replacing the entire module.

Fire detection measures are incorporated in the Project design in accordance with National Fire Protection Association (NFPA) safety standards. It should be noted that selection of batteries would be based on supply chain considerations;[1] as such, the capacity and size of the containers may change, as may the ratings of the conversion equipment (inverters and transformers). The number of containers, inverters, and transformers and expected total megawatt capacity are an estimate based on currently available technology and are similar to components typically found in BESS facilities. While the battery technology may change, the overall development footprint of the Project would remain consistent. As further described herein, anticipated minor alterations to the configuration of the BESS containers and related facilities within the Project footprint would not substantially change the Project design in a manner that would result in new significant environmental impacts or substantially increase the severity of impacts identified in this IS/MND.[2] Individual lithium-ion, or similar technology, battery cells form the core of the BESS. Cells are assembled either in series or parallel connection in sealed battery modules. The battery modules would be installed in self-supporting racks electrically connected either in a series or parallel to each other. The individual battery racks are connected in series or parallel configuration to deliver the BESS power rating. The battery racks would be fused.

The BESS facility would be unstaffed and would include remote operational control. The BESS facility would be uninhabited with no bathroom facilities, running water, or office space. Project operations would be monitored remotely through the SCADA system that would be housed in an enclosure adjacent to the Project substation. Periodic inspections and maintenance activities would occur on the Project site.

Project Substation

The Project substation would be the termination point of the 34.5-kilovolt (kV) medium voltage collection system. The power to and from the BESS would be passed through a final interconnection step-up transformer to convert it from 34.5kV to 66kV, which is the Project's interconnection voltage at the SCE Cortez Substation. The open-air Project substation would be on the southern portion of the west site adjacent to the SCE Cortez Substation as shown in the Preliminary Site Plan Improvements.

Operations and Maintenance

Once constructed, the Project would operate 7 days per week, 365 days per year. The facility would be remotely monitored by the original equipment manufacturer and the Applicant. Project operations would be monitored

1 The battery energy storage enclosures are manufactured by Tesla, Fluence, LG Chem, and a number of other manufacturers. The specific manufacturer will be selected at a future date based on supply chain considerations and available battery technology at the time of construction.

2 *Residents Against Specific Plan 380 v. County of Riverside* (2017) 9 Cal.App.5th 941.

remotely through the SCADA system. The Project would include one single story control enclosure for the SCADA system (approximately 400 to 700 square feet and a height of about 15 feet) near the Project substation.

During operation of the Project substation, operation and maintenance staff would visit the substation periodically for maintenance activities. Routine operations would require one or two workers in a light utility truck to visit the facility on a weekly basis.

Periodic augmentation of batteries within the Project site would occur to maintain the capacity over an approximate 30-year life. Occasionally, on-site maintenance would be required, which may include replacement of equipment and miscellaneous electrical repairs on an as-needed basis. No permanent sanitary facilities would be required. Maintenance trucks would be utilized to perform routine maintenance, including but not limited to equipment testing, monitoring, repair, routine procedures to ensure service continuity, and standard preventative maintenance. Typically, one major maintenance inspection would take place annually.

Generation Transmission and Collection Lines

Gen-Tie Line – West Site

The energy would be transported to and from the Project substation to the adjacent SCE Cortez Substation through a gen-tie line. The 66kV gen-tie line would be installed above ground from an approximately 50-foot point of change over (POCO) pole located within the Project substation, travel overhead approximately 90 feet into the SCE Cortez Substation, where it would connect to a 39-foot tall 66kV dead end switchyard structure, as described further below under SCE Cortez Substation Improvements. The 50-foot gen-tie POCO pole would be constructed of steel and would be at a height that is consistent with the existing equipment within the SCE Cortez Substation and the existing transmission lines along East Edna Place.

Collection Line

The Project would include a 34.5kV below-ground collection (feeder) line that would connect the east site to the west site and substation. The collection line would extend from northeast corner of the east site, west along the south side of East Edna Place within a portion of the public right-of-way approximately 600 feet before turning south and interconnecting with the Project substation.

Perimeter Fencing, Landscaping, Signage, and Lighting

The Project site would be enclosed by an 8-foot-tall perimeter concrete block wall and include wrought iron gates to enter the site. The primary purpose of the wall and rolling driveway gates, which would be equipped with a keypad, is to prevent unauthorized access to the site and to provide a buffer between the Project and surrounding uses. The portions of the Project site that front East Edna Place would be landscaped.

Low elevation (less than 14 feet) controlled security lighting would be installed throughout the site as necessary. Lighting installed as part of the Project would be required to incorporate light-emitting diode (LED) lighting for parking areas, entryways, and pedestrian areas, including wall-mounted motion-sensor LED lights on both the interior and exterior of the proposed concrete wall. Operational lighting would only be switched on when personnel enter the area through a manual activation (switch). All fixtures would be downward-directed and shielded to prevent light trespass and comply with applicable light-pollution standards.

Drainage Improvements

The Project proposes to match drainage patterns to those of existing conditions. The Project would redevelop the existing impervious surface lots to include pervious landscape and gravel areas, resulting in an overall increase in pervious area compared to existing conditions. Although detention is not required due to the Project's proposed increases to perviousness and improved infiltration capacity, the Project would include two bioretention basins designed to meet Low Impact Development (LID) standards and treat on-site runoff consistent with the City's MS4 permit requirements. Once operational, runoff would continue to surface flow generally south and southwest, discharging into the two respective bioretention basins for treatment and infiltration. Flows that exceed the basin capacity during large storm events would weir overflow south onto the Metrolink railroad tracks. Subsurface storm drain infrastructure is not proposed.

SCE Cortez Substation Improvements

In order to facilitate operation of the Project, SCE would make improvements to the SCE Cortez Substation to accommodate new equipment. These improvements would be made within the existing SCE substation footprint, would be within areas previously disturbed, and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. Below is a summary of improvements to the SCE Cortez Substation:

- Install facilities for a new 66kV switchrack position to terminate the Project's gen-tie line within the SCE Cortez Substation. This work includes the following:
  - One (1) 39-foot tall 66kV dead end switchyard structure
  - Two (2) 66kV voltage transformers with steel pedestal support structures
  - Three (3) 66kV line drops
  - One (1) 66kV circuit breaker
  - Three (3) 66kV group operated disconnect switches, one with grounding equipment
  - Extend bus 1 position to the west within the SCE Cortez Substation fence line
  - 200 feet of conductor from the 39-foot tall 66kV dead end structure within the SCE Cortez Substation to the Project's point of change in ownership location outside SCE Cortez Substation fence line.
- Install telecommunications facilities:
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend fiber optic cable to the communications room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend the Project's diverse telecommunications into the communication room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
- Lightwave, channel, and associated equipment (including terminal equipment), supporting protection, remote terminal unit and SCADA requirements at the Project and SCE Cortez Substation.

2 General Analysis and Methodology

The Project site is located within the South Coast Air Basin (SCAB) and is within the jurisdictional boundaries of the South Coast Air Quality Management District (SCAQMD), which has jurisdiction over the City where the Project is located.

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. Criteria air pollutants that are evaluated include volatile organic compounds (VOCs; also referred to as reactive organic gases [ROGs]), oxides of nitrogen (NO_x), carbon monoxide (CO), sulfur oxides (SO_x), particulate matter with an aerodynamic diameter less than or equal to 10 microns in size (coarse particulate matter, or PM_{10}), and particulate matter with an aerodynamic diameter less than or equal to 2.5 microns in size (fine particulate matter, or $PM_{2.5}$). VOCs and NO_x are important because they are precursors to ozone (O_3). Criteria air pollutant emissions associated with construction of the Project were estimated for the following emission sources: operation of off-road construction equipment, paving, architectural coating, on-road vendor (material delivery) trucks, and worker vehicles. The operational criteria air pollutant emissions were estimated from area sources, energy sources, and mobile sources.

2.1 Construction

CalEEMod Version 2022.1.1.30 was used to estimate emissions from construction of the Project (California Air Pollution Control Officers Association [CAPCOA] 2025). CalEEMod is a statewide computer model developed in cooperation with air districts throughout the state to quantify criteria air pollutant emissions associated with construction activities and operation of a variety of land use projects, such as residential, commercial, and industrial facilities. CalEEMod input parameters, including the land use type used to represent the Project and its size, construction schedule, and anticipated use of construction equipment, were based on information provided by the Applicant or default model assumptions if Project specifics were unavailable.

For purposes of estimating Project emissions (including on-site and off-site construction activities) and based on information provided by the Applicant and engineers, construction of the Project would commence in October 2025[3] and would last approximately 14 months , ending in November 2026.[4] The Project is assumed to have a 30-year lifespan (i.e., ending in 2056) and at the end of operation will be decommissioned. However, the EMFAC and OFFROAD models in CalEEMod only have emission factors through 2050. As such, the year 2050 was assumed for estimating emissions from the decommissioning phase. The analysis contained herein is based on the following assumptions (duration of phases are approximate):

- Demolition of Existing Facilities / Site Preparation – 2 months
- Grading – 1 month
- Collector Substation Installation – 5 months
- Battery/Container Installation – 6 months

[3] The analysis assumes a construction start date of October 2025, which represents the earliest date construction would initiate. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

[4] The analysis assumes overlap of construction phases. See Attachment A for detailed construction schedule assumptions.

- SCE Substation Construction/Upgrades – 12 months
- Gen-tie Installation – 3 months[5]
- Decommissioning – 6 months (year 2056)

Tier 4 Final offroad equipment would be used during construction. The SCE required improvements conservatively assumed a default tier mix. The construction equipment mix and vehicle trips used for estimating the Project-generated construction emissions are shown in Table 1, Construction Scenario Assumptions.

Table 1. Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Average Daily Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Demolition of Existing Facilities / Site Preparation	40	0	12	Excavators	1	8
				Graders	1	8
				Rubber Tired Loaders	1	8
				Skid Steer Loaders	1	8
				Tractors/Loaders/ Backhoes	1	8
				Generator Sets	1	8
Grading	40	2	4	Graders	1	8
				Tractors/Loaders/ Backhoes	1	8
				Skid Steer Loaders	1	8
				Generator Sets	1	8
Collector Substation Installation	40	4	4	Tractors/Loaders/ Backhoes	1	8
Battery/Container Installation	12	14	4	Rubber Tired Loaders	1	8
				Excavators	1	8
				Rough Terrain Forklifts	1	8
				Cranes	1	8
				Graders	1	8
				Skid Steer Loaders	1	8
				Welders	1	8
				Generator Sets	1	8
				Paving Equipment	1	8
				Rollers	1	8
SCE Substation Construction/ Upgrades	36	28	0	Cranes	1	3
				Forklifts	2	3
				Generator Sets	4	3
				Air Compressors	1	8
				Sweepers	1	4

[5] For modeling purposes the gen-tie line construction was assumed to be up to 3 months but will likely be less.

Table 1. Construction Scenario Assumptions

Source: See Attachment A.

Vendor trucks transporting building materials were assumed for building construction. The Project is assumed to require 750 cubic yards of cut and 400 cubic yards of fill, with 350 cubic yards of export during grading. Additional details regarding construction assumptions are provided in the modeling output, Attachment A.

2.2 Operations

The project site is currently occupied by two buildings with commercial, manufacturing, and light industrial uses and associated surface parking. The existing operational emissions were modeled using the CalEEMod with the following assumptions.

Existing Site

CalEEMod was used to estimate operational emissions from area sources, including emissions from consumer product use, architectural coatings, and landscape maintenance equipment. Emissions associated with natural gas usage in space heating and water heating are calculated in the building energy use module of CalEEMod, as described in the following text.

Consumer products are chemically formulated products used by household and institutional consumers, including detergents; cleaning compounds; polishes; floor finishes; cosmetics; personal care products; home, lawn, and garden products; disinfectants; sanitizers; aerosol paints; and automotive specialty products. Other paint products, furniture coatings, or architectural coatings are not considered consumer products (CAPCOA 2025). Consumer product volatile organic compound (VOC) emissions for the building is estimated in CalEEMod based on the floor area of building and on the default factor of pounds of VOC per building square foot per day. Consumer products associated with the parking lot and other asphalt surfaces include degreasers, which were estimated based on the square footage of the parking lot and the default factor of pounds of VOC per square foot per day. The CalEEMod default values for consumer products were assumed.

VOC off-gassing emissions result from evaporation of solvents contained in surface coatings such as in paints and primers used during building maintenance. CalEEMod calculates the VOC evaporative emissions from the application of surface coatings based on the VOC emission factor, building square footage, assumed fraction of surface area, and reapplication rate. The VOC emissions factor is based on the VOC content of the surface coatings, and SBCAPCD's Rule 323.1 (Architectural Coatings) governs the VOC content for interior and exterior coatings. This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories (SBCAPCD 2014). The proposed project would use architectural coatings that would not exceed 50 grams per liter for interior applications and 100 grams per liter for exterior applications consistent with SBCAPCD Rule 323.1. The model default reapplication rate of 10% of area per year is assumed. Consistent with CalEEMod defaults, it is assumed that the surface area for painting equals 2.7 times the floor square footage, with 75% assumed for interior coating and 25% assumed for exterior surface coating (CAPCOA 2025).

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chainsaws, and hedge trimmers. The emissions associated with landscape equipment use are estimated based on CalEEMod default values for emission factors (grams per square foot of building space per day), as well as number of summer days (when landscape maintenance would generally be performed, 180 days) and winter days.

Energy Sources

As represented in CalEEMod, energy sources include GHG emissions associated with building electricity and natural gas usage (non-hearth). Electricity use would contribute indirectly to GHGs, since GHG emissions occur at the site of the power plant, which is typically off site. Emissions were calculated by multiplying the energy use by the utility's carbon intensity (pounds of GHGs per megawatt-hour for electricity or 1,000 British thermal units for natural gas) for carbon dioxide (CO_2) and other GHGs. Annual electricity emissions were estimated in CalEEMod using the emissions factors for Southern California Edison, which would be the energy source provider for the proposed project. The electricity and natural gas demand for the existing site was based on CalEEMod defaults.

Mobile Sources

Following the completion of construction activities, the proposed project would generate criteria pollutant emissions from mobile sources (vehicular traffic) as a result of the residents and visitors of the proposed project. CalEEMod default data, including trip rates, trip lengths, trip characteristics, and emissions factors, were used for the model inputs. Traffic was assumed to include a mixture of vehicles in accordance with the associated use, as modeled within the CalEEMod. Emission factors representing the vehicle mix and emissions for 2025 for the existing site were used to estimate emissions associated with vehicular sources.

Project

Area Sources

The Project would be operated remotely with no permanent on-site operations and a limited number of maintenance personnel, and no occupied buildings or habitable structures. As such, area sources, which are sources of emissions distributed over a relatively small geographic area, are not anticipated to be included in Project operations. However, area sources are still conservatively included in the assessment and estimated

herein. CalEEMod was used to estimate operational emissions from area sources, including emissions from consumer product use, architectural coatings, and landscape maintenance equipment. See Attachment A for additional information.

Offroad Sources

During irregular maintenance, the Project may require the movement or replacement of battery enclosures during the lifetime of the Project. As such, the use of a crane was assumed to assist the lifting and movement of the BESS containers. CalEEMod was used to estimate emissions of the crane assuming 1 day of operation every 5 years.

Mobile Sources

Following the completion of construction activities, the Project would generate criteria pollutant emissions from mobile sources (vehicular traffic) as a result of the periodic maintenance of the Project. The Project was assumed to require up to 4 employees twice per month visiting the site for maintenance.[6] The estimated trip lengths and trip modes were based on CalEEMod defaults. CalEEMod was used to estimate emissions from proposed vehicular sources (refer to Attachment A). CalEEMod default data, including temperature, trip characteristics, variable start information, emissions factors, and trip distances, were conservatively used for the model inputs. Project-related traffic was assumed to include a mixture of vehicles in accordance with the associated use, as modeled within CalEEMod, which is based on the California Air Resources Board (CARB) EMFAC2021 model. Emission factors representing the vehicle mix and emissions for 2027 were used to estimate emissions associated with vehicular sources.

Stationary Sources

Following the completion of construction activities, the Project would generate criteria pollutant emissions from maintenance and testing of a backup diesel emergency generator. It was conservatively assumed that the generator is rated at 400 horsepower and would operate up to 200 hours per year for maintenance and testing purposes and potential emergency use based on SCAQMD permit limits. The Project applicant has committed to using a US EPA certified Tier 4 Final generator.

3 Air Quality Assessment

3.1 Thresholds of Significance

The State of California has developed guidelines to address the significance of air quality impacts based on Appendix G of the CEQA Guidelines (14 California Code of Regulations [CCR] 15000 et seq.). In addition, Appendix G of the CEQA Guidelines indicates that where available, the significance criteria established by the applicable air district may be relied on to determine whether the Project would have a significant impact on air quality. This analysis focuses on addressing the potential for the Project to violate any air quality standard or contribute substantially to an existing or projected air quality

[6] Although not quantitatively assessed in the Project modeling, mobile source emissions compared to existing baseline conditions will be substantially reduced, given that the current site includes two developed industrial and manufacturing buildings that generate mobile source emissions through vehicles accessing the property.

violation, which is determined by comparing estimated Project-generated construction and operational emissions to numeric mass emissions thresholds established by SCAQMD.

SCAQMD has adopted thresholds to address the significance of air quality impacts resulting from a project. A project would result in a substantial contribution to an existing air quality violation of the National Ambient Air Quality Standards (NAAQS) or California Ambient Air Quality Standards (CAAQS) for O_3, which is a nonattainment pollutant, if the Project's construction mass emissions would exceed SCAQMD's VOC or NO_x significance thresholds shown in Table 2. These emission-based thresholds for O_3 precursors are intended to serve as a surrogate for an "ozone significance threshold" (i.e., the potential for adverse O_3 impacts to occur) because O_3 itself is not emitted directly, and the effects of an individual project's emissions of O_3 precursors (VOC and NO_x) on O_3 levels in ambient air cannot be determined through air quality models or other quantitative methods. The SCAB is also nonattainment for the state PM_{10} and federal and state $PM_{2.5}$ standards.

Table 2. SCAQMD Air Quality Significance Thresholds

Criteria Pollutants Mass Daily Thresholds		
Pollutant	**Construction (Pounds per Day)**	**Operation (Pounds per Day)**
VOCs	75	55
NO_x	100	55
CO	550	550
SO_x	150	150
PM_{10}	150	150
$PM_{2.5}$	55	55
Lead[a]	3	3
TACs and Odor Thresholds		
TACs[b]	Maximum incremental cancer risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic and acute hazard index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402	
Ambient Air Quality Standards for Criteria Pollutants[c]		
NO_2 1-hour average NO_2 annual arithmetic mean	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (state) 0.030 ppm (state) and 0.0534 ppm (federal)	
CO 1-hour average CO 8-hour average	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 20 ppm (state) and 35 ppm (federal) 9.0 ppm (state /federal)	
PM_{10} 24-hour average PM_{10} annual average	10.4 µg/m³ (construction)[d] 2.5 µg/m³ (operation) 1.0 µg/m³	

Table 2. SCAQMD Air Quality Significance Thresholds

Criteria Pollutants Mass Daily Thresholds		
Pollutant	**Construction (Pounds per Day)**	**Operation (Pounds per Day)**
$PM_{2.5}$ 24-hour average	10.4 µg/m³ (construction)[d] 2.5 µg/m³ (operation)	

Source: SCAQMD 2023.
Notes: SCAQMD = South Coast Air Quality Management District; VOCs = volatile organic compounds; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; TAC = toxic air contaminant; NO_2 = nitrogen dioxide; ppm = parts per million; µg/m³ = micrograms per cubic meter.
[a] The phaseout of leaded gasoline started in 1976. Since gasoline no longer contains lead, the Project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.
[b] TACs include carcinogens and non-carcinogens.
[c] Ambient air quality standards for criteria pollutants are based on SCAQMD Rule 1303, Table A-2, unless otherwise stated.
[d] Ambient air quality threshold are based on SCAQMD Rule 403.

In addition to the emission-based thresholds listed in Table 2, SCAQMD also recommends the evaluation of localized air quality impacts to sensitive receptors in the immediate vicinity of the Project as a result of construction activities. Such an evaluation is referred to as a localized significance threshold (LST) analysis. The LST analysis focuses on construction equipment and does not include mobile sources. Therefore, the LST analysis only applies to the construction equipment on-site, not the worker vehicles or vendor trucks. For project sites of 5 acres or less, the SCAQMD LST Methodology (2009) includes lookup tables that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance criteria (i.e., the emissions would not cause an exceedance of the applicable concentration limits for NO_2, CO, PM_{10}, and $PM_{2.5}$) without performing Project-specific dispersion modeling. The Project would disturb less than 5 acres per day, so it is appropriate to use the lookup tables for the LST evaluation.

The LST significance thresholds for NO_2 and CO represent the allowable increase in concentrations above background levels in the vicinity of a project that would not cause or contribute to an exceedance of the relevant ambient air quality standards, while the threshold for PM_{10} represents compliance with SCAQMD Rule 403 (Fugitive Dust). The LST significance threshold for $PM_{2.5}$ is intended to ensure that construction emissions do not contribute substantially to existing exceedances of the $PM_{2.5}$ ambient air quality standards. The allowable emission rates depend on the following parameters:

- Source-receptor area (SRA) in which the Project is located
- Size of the Project site
- Distance between the Project site and the nearest receptor (with receptors for purposes of the LST analysis defined as any areas where persons can be situated for an hour or longer at a time)

The Project site is located in SRA 9 (East San Gabriel Valley). LST pollutant screening level concentration data is currently published for 1-, 2-, and 5-acre sites for varying distances. In accordance with the SCAQMD *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds*, the Project would disturb a maximum of 0.5-acres per day during the grading phase. The nearest receptor is located just south of the Project, approximately 6 meters from the Project site boundary. As such, the LST receptor distance for NO_2 and CO was assumed to be 82 feet (25 meters) which is the closest value. For PM_{10} and $PM_{2.5}$, the nearest receptor that would be present for 24-hours is 130 meters from the Project site. As such, the LST for 100 meters was assumed for PM_{10} and $PM_{2.5}$. The LST values from the SCAQMD lookup tables for SRA 9 (East San Gabriel Valley) for a 1-acre project site and a receptor distance of 25 meters (for NO_2 and CO) and 100 meters (for PM_{10} and $PM_{2.5}$) are shown in Table 3.

Table 3. Localized Significance Thresholds for Source-Receptor Area 9 (East San Gabriel Valley)

Pollutant	Threshold (pounds/day)
Construction	
NO_2	89
CO	623
PM_{10}	34
$PM_{2.5}$	9
Operation	
NO_2	89
CO	623
PM_{10}	9
$PM_{2.5}$	3

Source: SCAQMD 2009.
Notes: NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter
Localized significance thresholds were determined based on the values for a 1-acre site at a distance of 25 meters (82 feet) (for NO_2 and CO) and 100 meters (for PM_{10} and $PM_{2.5}$) from the nearest sensitive receptor.

3.2 Impact Analysis

3.2.1 Would the project conflict with or obstruct implementation of the applicable air quality plan?

The Project site is located within the SCAB, which includes the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties and all of Orange County, and is within the jurisdictional boundaries of SCAQMD.

SCAQMD administers SCAB's Air Quality Management Plan (AQMP), which is a comprehensive document outlining an air pollution control program for attaining all CAAQS and NAAQS. The most recent adopted AQMP for the SCAB is the 2022 AQMP (SCAQMD 2022), which was adopted by SCAQMD's Governing Board on December 2, 2022. The 2022 AQMP focuses on available, proven, and cost-effective alternatives to traditional strategies while seeking to achieve multiple goals in partnership with other entities seeking to promote reductions in toxic risk, as well as efficiencies in energy use, transportation, and goods movement (SCAQMD 2022).

The purpose of a consistency finding with regard to the AQMP is to determine if a project is consistent with the assumptions and objectives of the regional air quality plans, and if it would interfere with the region's ability to comply with federal and state air quality standards. SCAQMD has established criteria for determining consistency with the currently applicable AQMP in Chapter 12, Sections 12.2 and 12.3 of the SCAQMD CEQA Air Quality Handbook. These criteria are (SCAQMD 1993):

- Whether the Project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.
- Whether the Project would exceed the assumptions in the AQMP or increments based on the year of Project buildout and phase.

To address the first criterion, Project-generated criteria air pollutant emissions have been estimated and analyzed for significance and are addressed under Section 3.2.2. Detailed results of this analysis are included in Attachment A, CalEEMod Emissions Outputs. As presented in Section 3.2.2, construction and operation of the Project would not generate criteria air pollutant emissions that exceed SCAQMD's thresholds.

The second criterion regarding the Project's potential to exceed the assumptions in the AQMP or increments based on the year of Project buildout and phase is primarily assessed by determining consistency between the Project's land use designations and its potential to generate population growth. In general, projects are considered consistent with, and not in conflict with or obstructing implementation of, the AQMP if the growth in socioeconomic factors is consistent with the underlying regional plans used to develop the AQMP (per Consistency Criterion No. 2 of the SCAQMD CEQA Air Quality Handbook). SCAQMD primarily uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, employment by industry) developed by the Southern California Association of Governments (SCAG) for its Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (SCAG 2020). This document, which is based on general plans for cities and counties in the SCAB, is used by SCAQMD to develop the AQMP emissions inventory (SCAQMD 2022).[7] The SCAG 2020 RTP/SCS and the associated Regional Growth Forecast are generally consistent with the local plans; therefore, the 2022 AQMP is generally consistent with local government plans.

The Project site is located in the City of Covina on private lands within the General Industrial (GI) General Plan land use designation. The City's General Plan Land Use section describes GI land use as "permit light manufacturing, processing, assembly, warehousing, and related activities plus ancillary administrative offices." The zoning designation for the Project site is Light Manufacturing (M-1). The City's municipal code defines the M-1 zoning designation as follows: "light manufacturing zone is intended to provide for the development of industrial uses which include fabrication, manufacturing, assembly or processing of materials that are in already processed form." Per the City Code, electric distribution and public utility substations, electric and public utility transmission substations, public and private utility service yards are considered permitted uses. The Project does not propose a change in land use designation (e.g., through an amendment to the property's zoning from one zone to another). The implementation of the Project, including the SCE improvements would not generate an increase in growth demographics (employment, housing, or population) that would conflict with existing projections within the region. Accordingly, the Project including SCE improvements is consistent with the SCAG 2020 RTP/SCS forecasts used in the SCAQMD AQMP development.

In summary, based on the considerations presented for the two criteria, impacts relating to the Project's (including SCE improvements) potential to conflict with or obstruct implementation of the applicable AQMP would be less than significant.

[7] Information necessary to produce the emissions inventory for the SCAB is obtained from SCAQMD and other governmental agencies, including the California Air Resources Board (CARB), California Department of Transportation (Caltrans), and SCAG. Each of these agencies is responsible for collecting data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profile, and emissions) and developing methodologies (e.g., model and demographic forecast improvements) required to generate a comprehensive emissions inventory. SCAG incorporates these data into its Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. Although the more recent SCAG 2024 RTP/SCS was approved in April 2024, consistency with the 2020 RTP/SCS is considered in this impact determination since SCAG's socioeconomic and transportation activities projections in their 2020 RTP/SCS are integrated in the 2022 AQMP (SCAQMD 2022).

3.2.2 Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?

Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and SCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, Project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

Construction Emissions

Proposed construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment and soil disturbance) and off-site sources (i.e., on-road vendor trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity; the specific type of operation; and, for particulate matter, the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated.

The CalEEMod Version 2022.1.1.30 was used to estimate emissions from construction of the Project. Internal combustion engines used by construction equipment, trucks, and worker vehicles would result in emissions of VOCs, NO_x, CO, PM_{10}, and $PM_{2.5}$. PM_{10} and $PM_{2.5}$ emissions would also be generated by entrained dust, which results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil. The Project would be required to comply with SCAQMD Rule 403 to control dust emissions generated during any dust-generating activities. Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active dust areas two times per day, with additional watering depending on weather conditions. The CalEEMod default assumptions were used for estimating fugitive dust emissions from grading on-site. Table 4 presents the estimated maximum daily construction emissions generated during construction of the Project. Details of the emission calculations are provided in Attachment A.

Table 4. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

Year	VOC	NOx	CO	SOx	PM_{10}	$PM_{2.5}$
	pounds per day					
Summer						
2026	1.82	18.92	46.32	0.09	2.68	0.94
2050[1]	0.18	1.28	8.26	0.02	0.79	0.22
Winter						
2025	1.09	8.47	10.93	0.02	1.02	0.46
2026	1.51	15.92	35.61	0.07	2.72	0.80
2050[1]	0.18	1.31	8.08	0.02	0.79	0.22
Maximum	*1.82*	*18.92*	*46.32*	*0.09*	*2.68*	*0.94*
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Threshold Exceeded?	No	No	No	No	No	No

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SCAQMD = South Coast Air Quality Management District.
[1] 2050 represents the decommissioning phase of the Project.
Emissions include compliance with SCAQMD Rules 403 and 1113.
See Attachment A for complete results.

As shown in Table 4, the Project construction including SCE improvements would not exceed SCAQMD's daily thresholds. Therefore, construction impacts associated with criteria air pollutant emissions would be less than significant.

Operational Emissions

Emissions from the operational phase of the Project were estimated using CalEEMod. Operational year 2027 was assumed as it would be the first year following completion of construction. Table 5 presents the emissions during operation for the existing site and the Project.

See Attachment A for complete results. Columns may not add due to rounding. <0.01 = less than 0.005

As shown in Table 5, the Project including SCE improvements net emissions would not exceed SCAQMD's significance thresholds during operations. Therefore, operational impacts associated with criteria air pollutant emissions would be less than significant.

Cumulative Impacts

In considering cumulative impacts from the Project, the analysis must specifically evaluate a Project's contribution to the cumulative increase in pollutants for which the SCAB is designated as nonattainment for the CAAQS and NAAQS. If a Project's emissions would exceed SCAQMD's significance thresholds, it would be considered to have a cumulatively considerable contribution to nonattainment status in the SCAB. If a project does not exceed thresholds and is determined to have less than significant Project-specific impacts, it may still contribute to a significant cumulative impact on air quality. The basis for analyzing the Project's cumulatively considerable contribution is if the Project's contribution accounts for a considerable proportion of the cumulative total emissions (i.e., it represents a "cumulatively considerable contribution" to the cumulative air quality impact) and consistency with SCAQMD's 2022 AQMP, which addresses cumulative emissions in the SCAB.

The SCAB has been designated as a federal nonattainment area for O_3 and $PM_{2.5}$ and a state nonattainment area for O_3, PM_{10}, and $PM_{2.5}$. The nonattainment status is the result of cumulative emissions from various sources of air pollutants and their precursors within the SCAB, including motor vehicles, off-road equipment, and commercial and industrial facilities. Construction of the Project would generate VOC and NO_x emissions (which are precursors to O_3) and emissions of PM_{10} and $PM_{2.5}$. As indicated in Tables 4 and 5, Project-generated construction and operational emissions would not exceed SCAQMD's emission-based significance thresholds for VOC, NO_x, CO, SO_2, PM_{10}, or $PM_{2.5}$.

Cumulative localized impacts would potentially occur if a construction project were to occur concurrently with another off-site project. Construction schedules for potential future projects near the Project site are currently unknown; therefore, potential construction impacts associated with two or more simultaneous projects would be speculative.[8] However, future projects would be subject to CEQA and would require an air quality analysis and, where necessary, mitigation if the Project would exceed SCAQMD's significance thresholds. Criteria air pollutant emissions associated with construction activity of future proposed projects would be reduced through implementation of control measures required by SCAQMD. Cumulative PM_{10} and $PM_{2.5}$ emissions would be reduced because all future projects would be subject to SCAQMD Rule 403 (Fugitive Dust), which sets forth general and specific requirements for all construction sites in the SCAQMD.

[8] The CEQA Guidelines state that if a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact (14 CCR 15145). This discussion is nonetheless provided in an effort to show good-faith analysis and to comply with CEQA's information disclosure requirements.

Since criteria pollutant mass emissions impacts shown in Tables 4 and 5 would not be expected to exceed any of the air quality significance thresholds, cumulative air quality impacts would also be expected to be less than significant. SCAQMD cumulative air quality significance thresholds are the same as project-specific air quality significance thresholds. Therefore, potential adverse impacts from implementing the Project would not be "cumulatively considerable" as defined by CEQA Guidelines Section 15064(h)(1) for air quality impacts. Per CEQA Guidelines Section 15064(h)(4), the mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the Project's incremental effects are cumulatively considerable.

The SCAQMD's guidance on addressing cumulative impacts for air quality is as follows: "As Lead Agency, the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR." "Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."[9]

Based on the previous considerations, the Project including the SCE improvements would not result in a cumulatively considerable increase in emissions of nonattainment pollutants, and cumulative impacts would be less than significant.

3.3.3 Would the project expose sensitive receptors to substantial pollutant concentrations?

Localized Significance Thresholds

Construction and operational activities associated with the Project would result in sources of on-site fugitive dust and equipment emissions. The maximum allowable daily emissions that would satisfy the SCAQMD localized significance criteria for SRA 9 are presented in Table 6 and compared to the maximum daily on-site construction and operational emissions.

Table 6. Localized Significance Thresholds Analysis for the Project

Pollutant	Project Emissions (Pounds per Day)	LST Criteria (Pounds per Day)	Exceeds LST?
Construction			
NO_2	14.82	89	No
CO	38.40	623	No
PM_{10}	1.24	34	No
$PM_{2.5}$	0.31	9	No
Operation			
NO_2	3.83	89	No
CO	7.91	623	No

[9] South Coast AQMD Cumulative Impacts Working Group White Paper on Potential Control Strategies to Address Cumulative Impacts From Air Pollution, August 2003, Appendix D, Cumulative Impact Analysis Requirements Pursuant to CEQA, at D-3. http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulativeimpacts-white-paper-appendix.pdf.

Table 6. Localized Significance Thresholds Analysis for the Project

Pollutant	Project Emissions (Pounds per Day)	LST Criteria (Pounds per Day)	Exceeds LST?
PM_{10}	0.21	9	No
$PM_{2.5}$	0.16	3	No

Source: SCAQMD 2009.
Notes: LST = localized significance threshold; NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter.
See Appendix A for detailed results.
LSTs are shown for 1-acre project sites corresponding to a distance to a sensitive receptor of 25 meters (82 feet) (for NO_2 and CO) and 100 meters (for PM_{10} and $PM_{2.5}$) for SRA 9 (East San Gabriel Valley).
These estimates reflect control of fugitive dust required by SCAQMD Rule 403.
The emissions represent worst-case operating scenario during construction.

As shown in Table 6, the Project LST including SCE improvements would not exceed the established significance thresholds, and thus, would result in a less than significant localized impact to sensitive receptors during construction and operation.

CO Hotspots

Traffic-congested roadways and intersections have the potential to generate localized high levels of CO. Localized areas where ambient concentrations exceed federal and/or state standards for CO are termed CO "hotspots." CO transport is extremely limited and disperses rapidly with distance from the source. Under certain extreme meteorological conditions, however, CO concentrations near a congested roadway or intersection may reach unhealthy levels affecting sensitive receptors. Typically, high CO concentrations are associated with severely congested intersections operating at an unacceptable level of service (LOS) (LOS E or worse is unacceptable). Projects contributing to adverse traffic impacts may result in the formation of a CO hotspot. Additional analysis of CO hotspot impacts would be conducted if a project would result in a significant impact or contribute to an adverse traffic impact at a signalized intersection that would potentially subject sensitive receptors to CO hotspots.

Title 40 of the Code of Federal Regulations, Section 93.123(c)(5), Procedures for Determining Localized CO, PM_{10}, and $PM_{2.5}$ Concentrations (Hot-Spot Analysis), states that "CO, PM_{10}, and $PM_{2.5}$ hot-spot analyses are not required to consider construction-related activities, which cause temporary increases in emissions. Each site which is affected by construction-related activities shall be considered separately, using established 'Guideline' methods. Temporary increases are defined as those which occur only during the construction phase and last five years or less at any individual site" (40 CFR 93.123). While Project construction would involve on-road vehicle trips from trucks and workers during construction, construction activities would last approximately 14 months and would not require a Project-level construction hotspot analysis. With respect to Project operation, the Project will be unmanned and would require only infrequent maintenance vehicle trips.

In addition, at the time that the SCAQMD Handbook (1993) was published, the SCAB was designated nonattainment under the CAAQS and NAAQS for CO. In 2007, the SCAQMD was designated in attainment for CO under both the CAAQS and NAAQS as a result of the steady decline in CO concentrations in the SCAB due to turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities. The SCAQMD conducted CO modeling for the 2003 AQMP[10] (SCAQMD 2003) for the four worst-case intersections in the SCAB: (1) Wilshire Boulevard and Veteran Avenue, (2) Sunset Boulevard and Highland

[10] SCAQMD's CO hotspot modeling guidance has not changed since 2003.

Avenue, (3) La Cienega Boulevard and Century Boulevard, and (4) Long Beach Boulevard and Imperial Highway. At the time the 2003 AQMP was prepared, the intersection of Wilshire Boulevard and Veteran Avenue was the most congested intersection in Los Angeles County, with an average daily traffic volume of about 100,000 vehicles per day. The 2003 AQMP also projected 8-hour CO concentrations at these four intersections for 1997 and from 2002 through 2005. From years 2002 through 2005, the maximum 8-hour CO concentration was 3.8 ppm at the Sunset Boulevard and Highland Avenue intersection in 2002; the maximum 8-hour CO concentration was 3.4 ppm at the Wilshire Boulevard and Veteran Avenue in 2002.

Accordingly, CO concentrations at congested intersections would not exceed the 1-hour or 8-hour CO CAAQS unless projected daily traffic would be at least over 100,000 vehicles per day. The Project was assumed to require up to 4 employees twice per month visiting the site for maintenance. Because the Project is not anticipated to increase daily traffic volumes at any study intersection to more than 100,000 vehicles per day, a CO hotspot is not anticipated to occur.

Based on these considerations, the Project including SCE improvements would not generate traffic that would contribute to potential adverse traffic impacts that may result in the formation of CO hotspots. This conclusion is supported by the analysis in the Transportation Assessment, which demonstrates that traffic impacts would be less than significant. In addition, due to continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SCAB is steadily decreasing. Based on these considerations, the Project including SCE improvements would result in a less-than-significant impact to air quality with regard to potential CO hotspots.

Toxic Air Contaminants

Sensitive receptors are those individuals more susceptible to the effects of air pollution than the population at large. People most likely to be affected by air pollution include children, the elderly, and people with cardiovascular and chronic respiratory diseases. According to SCAQMD, sensitive receptors include residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes (SCAQMD 1993). The nearest sensitive-receptor land uses are residences approximately 250 feet west of the Project site.[11]

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute (immediate) and/or chronic (cumulative) non-cancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

TACs are identified by federal and state agencies based on a review of available scientific evidence. In the state of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the

[11] The SCAQMD definition of sensitive receptors for the purposes of the toxic air contaminant exposure differs from that of the SCAQMD LST receptor definition. As such, the receptors for each analysis are different.

California Air Toxics "Hot Spots" Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources, such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources, such as automobiles; and area sources, such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

Project construction would result in emissions of diesel particulate from heavy construction equipment and trucks accessing the site. Project operation would result in emissions of diesel particulate matter from maintenance and testing of the emergency generator. Diesel particulate is characterized as a TAC by the State of California.

In the unlikely event of a thermal runaway event, potential short-term emissions could include hydrocarbons, carbon monoxide, carbon dioxide, hydrogen, heptane, benzene, toluene, diethyl carbonate, dimethyl carbonate, and ethyl methyl carbonate. In third-party UL 9540A destructive testing, an intentional thermal runaway event found that visible flames outside of a battery cabinet would be unlikely, and any flaming would be unlikely to be sustained. The Hazard Mitigation Analysis (HMA) for the project determined that toxic and highly toxic gases released during potential fires will not reach concentrations in excess of the immediately dangerous to life or health (IDLH) levels and flammable gases released from ESS during fire, overcharging, and other abnormal conditions will be controlled through the use of ventilation of the gases, preventing accumulation, or by deflagration venting (FRA 2025). Any event would be short-term in nature and emissions would cease once the fire is extinguished. Furthermore, the BESS is designed with a thermal management system, electrical fault protection devices, explosion control systems, and fire detection and suppression systems to prevent a thermal runaway event. Therefore, in the event of a battery fire impacts to sensitive receptors would be considered less than significant.

The Office of Environmental Health Hazard Assessment (OEHHA) has identified carcinogenic and chronic noncarcinogenic effects from long-term exposure, but has not identified health effects due to short-term exposure to diesel exhaust. According to the OEHHA, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should be limited to the period/duration of activities associated with the Project (OEHHA 2015). Thus, the duration of the proposed construction activities would only constitute a small percentage of the total 30-year exposure period. In an abundance of caution, a health risk assessment (HRA) was prepared to evaluate potential impacts to proximate sensitive and worker receptors from construction of the Project. Operation of the emergency generator and offroad equipment was also evaluated for 30 years of operation. The complete methodology is found within the HRA modeling analysis for the Project (Dudek 2025). The results of the HRA are shown in Tables 7 and 8.

Table 7. Summary of Cancer Health Risk Results

Receptor Type	UTME (m)	UTMN (m)	Cancer Risk (in a million)	Significance Threshold (in a million)
MEIR	418671.75	3772791.75	7.5	≥10
MEIW	418892	3772764.65	1.7	≥10
Sensitive Receptor*	420522.56	3773306.25	0.6	≥10

Notes: PMI = point of maximum impact; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.
* The sensitive receptor with the highest health risk is Charter Oak High School due to the dispersion characteristics, terrain, and meteorology

Table 8. Summary of Chronic Non-Cancer Health Risk Results

Receptor Type	UTME (m)	UTMN (m)	Chronic HI	Health Endpoint(s)	Significance Threshold (HI)
MEIR	418671.75	3772791.75	0.01	respiratory	>1
MEIW	418892	3772764.65	0.1	respiratory	>1
Sensitive Receptor*	420522.56	3773306.25	0.001	respiratory	>1

Source: Dudek 2025.
Notes: PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.
* The sensitive receptor with the highest health risk is Charter Oak High School due to the dispersion characteristics, terrain, and meteorology

As shown in Tables 7 and 8, the Project including SCE improvements would not result in cancer and chronic impacts that would exceed the SCAQMD significance thresholds during construction and operation. Impacts would be less than significant.

Health Impacts of Criteria Air Pollutants

Construction of the Project including SCE improvements would generate criteria air pollutant emissions; however, the Project would not exceed the SCAQMD mass-emission thresholds.

The SCAB is designated as nonattainment for O_3 for the NAAQS and CAAQS. Thus, existing O_3 levels in the SCAB are at unhealthy levels during certain periods. The health effects associated with O_3 generally relate to reduced lung function. Because the Project would not involve construction activities that would result in O_3 precursor emissions (VOC or NO_x) that would exceed the SCAQMD thresholds, the Project is not anticipated to substantially contribute to regional O_3 concentrations and associated health impacts. Similar to construction, no SCAQMD threshold would be exceeded during operation.

In addition to O_3, NO_x emissions contribute to potential exceedances of the NAAQS and CAAQS for NO_2 (since NO_2 is a constituent of NO_x). Exposure to NO_2 can cause lung irritation, bronchitis, and pneumonia, and lower resistance to respiratory infections. As depicted in Table 6, Project construction including SCE improvements would not exceed

the SCAQMD localized thresholds for NO_2. Thus, construction of the Project is not expected to exceed the NO_2 standards or contribute to associated health effects. During Project operation, there would be minimal emissions of NO_2 when employees visit the site for periodic maintenance. As shown in Table 6, Project operational NO_x emissions would be well below SCAQMD thresholds. Therefore, operation of the Project including SCE improvements is not expected to exceed the NO_2 standards or contribute to associated health effects.

CO tends to be a localized impact associated with congested intersections. CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. CO hotspots were discussed previously as a less than significant impact. Thus, the Project's CO emissions including SCE improvements would not contribute to the health effects associated with this pollutant.

The SCAB is designated as nonattainment for PM_{10} under the CAAQS and nonattainment for $PM_{2.5}$ under the NAAQS and CAAQS. Particulate matter contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems, including premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing (USEPA 2016). As with O_3 and NO_x, the Project would not generate emissions of PM_{10} or $PM_{2.5}$ that would exceed SCAQMD's LSTs. Accordingly, the Project's PM_{10} and $PM_{2.5}$ emissions including SCE improvements are not expected to cause any increase in related regional health effects for these pollutants.

In summary, as shown in Table 6, the Project including SCE improvements would not result in any potentially significant contribution to local or regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants. Impacts would be less than significant.

3.3.4 Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The occurrence and severity of potential odor impacts depends on numerous factors. The nature, frequency, and intensity of the source; the wind speeds and direction; and the sensitivity of receiving location each contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying and cause distress among the public and generate citizen complaints.

Odors would be potentially generated from vehicles and equipment exhaust emissions during construction of the Project including SCE improvements. Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and asphalt pavement application. Such odors would disperse rapidly from the Project site and generally occur at magnitudes that would not affect substantial numbers of people. Therefore, impacts associated with odors during construction would be less than significant.

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities (SCAQMD 1993). The Project including SCE improvements would not create any new sources of odor during operation. Therefore, Project operations would result in an odor impact that is less than significant.

4 Conclusions

Criteria air pollutant emissions generated during construction and operation of the Project including SCE improvements would not exceed SCAQMD's significance thresholds or result in a cumulatively considerable net increase in emissions. Similarly, the emissions would also not exceed the LST significance thresholds for sensitive receptors during construction or operations, or create a CO hotspot. Therefore, the Project including SCE improvements would result in a less than significant impact.

Sincerely,

Adam Poll, QEP, LEED AP BD+C
Senior Air Quality Specialist

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	23.4	annual days of extreme heat
Extreme Precipitation	6.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	78.0
AQ-PM	79.9
AQ-DPM	32.2
Drinking Water	96.7
Lead Risk Housing	60.5

Pesticides	0.00
Toxic Releases	70.6
Traffic	34.4
Effect Indicators	—
CleanUp Sites	59.6

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	64.0
Healthy Places Index Score for Project Location (b)	71.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Based on applicant provided information.
Construction: Off-Road Equipment	Based on applicant provided information.
Construction: Trips and VMT	Based on applicant provided information.

Operations: Energy Use	Energy for auxiliary use.
Operations: Water and Waste Water	No indoor water use.
Operations: Refrigerants	SF6 emissions estimated outside of CalEEMod.
Operations: Off-Road Equipment	One crane used to move containers every few years.
Operations: Emergency Generators and Fire Pumps	100% load assumed.

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Covina Reliability Project
Construction Start Date	10/1/2025
Operational Year	2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	1.80
Precipitation (days)	22.4
Location	34.09257760757768, -117.88040796594223
County	Los Angeles-South Coast
City	Covina
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5040
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Light Industry	1.00	1000sqft	0.02	1,000	3,500	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—
Unmit.	2.19	1.82	18.9	46.3	0.09	0.40	2.28	2.68	0.36	0.58	0.94
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—	—	—

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	23.4	annual days of extreme heat
Extreme Precipitation	6.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	78.0
AQ-PM	79.9
AQ-DPM	32.2
Drinking Water	96.7
Lead Risk Housing	60.5
Pesticides	0.00
Toxic Releases	70.6
Traffic	34.4
Effect Indicators	—
CleanUp Sites	59.6
Groundwater	17.5
Haz Waste Facilities/Generators	65.2
Impaired Water Bodies	0.00
Solid Waste	75.7
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	64.0
Healthy Places Index Score for Project Location (b)	71.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Based on applicant provided information.
Construction: Off-Road Equipment	Based on applicant provided information.
Construction: Trips and VMT	Based on applicant provided information.
Operations: Energy Use	Energy for auxiliary use.
Operations: Water and Waste Water	No indoor water use.
Operations: Refrigerants	SF6 emissions estimated outside of CalEEMod.
Operations: Off-Road Equipment	One crane used to move containers every few years.
Operations: Emergency Generators and Fire Pumps	100% load assumed.
Operations: Generators + Pumps EF	Tier 4

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Covina Reliability Project LST
Construction Start Date	10/1/2025
Operational Year	2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	1.80
Precipitation (days)	22.4
Location	34.09257760757768, -117.88040796594223
County	Los Angeles-South Coast
City	Covina
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5040
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Light Industry	1.00	1000sqft	0.02	1,000	3,500	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	NOx	CO	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T
Daily, Summer (Max)	—	—	—	—	—	—	—	—
Unmit.	14.8	38.4	0.35	0.53	0.82	0.33	0.06	0.33
Daily, Winter (Max)	—	—	—	—	—	—	—	—
Unmit.	12.8	31.7	0.33	0.94	1.24	0.31	0.14	0.42
Average Daily (Max)	—	—	—	—	—	—	—	—
Unmit.	6.48	15.3	0.17	0.11	0.29	0.16	0.02	0.18
Annual (Max)	—	—	—	—	—	—	—	—
Unmit.	1.18	2.79	0.03	0.02	0.05	0.03	< 0.005	0.03

2.2. Construction Emissions by Year, Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Year	NOx	CO	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T
Daily - Summer (Max)	—	—	—	—	—	—	—	—
2026	14.8	38.4	0.35	0.53	0.82	0.33	0.06	0.33

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	23.4	annual days of extreme heat
Extreme Precipitation	6.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	78.0
AQ-PM	79.9
AQ-DPM	32.2
Drinking Water	96.7
Lead Risk Housing	60.5
Pesticides	0.00
Toxic Releases	70.6
Traffic	34.4
Effect Indicators	—
CleanUp Sites	59.6

Healthy Places Index Score for Project Location (b)	71.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Based on applicant provided information.
Construction: Off-Road Equipment	Based on applicant provided information.
Construction: Trips and VMT	No mobile for LST.
Operations: Energy Use	Energy for auxiliary use.
Operations: Water and Waste Water	No indoor water use.
Operations: Refrigerants	SF6 emissions estimated outside of CalEEMod.
Operations: Off-Road Equipment	One crane used to move containers every few years.
Operations: Emergency Generators and Fire Pumps	100% load assumed.
Operations: Generators + Pumps EF	Tier 4

Appendix A-2
Hazard Mitigation Analysis

Hazard Mitigation Analysis:
Covina Battery Energy Storage System
Tesla Megapack 2 XL
Los Angeles County, CA

Final Report | Rev.2 | December 26, 2025

Prepared for:

Covina Reliability Project, LLC
101 W. Broadway, Suite 1120
San Diego, CA 92101

EXECUTIVE SUMMARY

Fire and Risk Alliance, LLC, (FRA) performed a Hazard Mitigation Analysis (HMA) in accordance with the requirements of the Los Angeles County Fire Code (LACFC). This HMA is being used to evaluate the Tesla Megapack 2 XL (MP2XL) lithium-ion Battery Energy Storage System (BESS), intended for installation at the Covina BESS. The Covina BESS will have an approximate capacity of 110 megawatts (MW)/440 megawatt hours (MWh), initially utilizing 132 MP2XLs. The Covina BESS includes an augmentation plan of 29 MP2XLs.

This narrative, developed by FRA, summarizes our analysis. It is intended to be used as a tool for a Fire Code Official (FCO) or an Authority Having Jurisdiction (AHJ) to assist in their review of the Covina BESS. Based on our review of the available materials, our background, experience and training, and the analysis performed to date described above, the following conclusions are provided for the Covina BESS:

1. The MP2XL and the Covina BESS site design can meet the LACFC requirements for an outdoor BESS installation near exposures when it is installed in accordance with the MP2XL Design and Installation Manual (DIM), its listing, the approved drawings, and the LACFC. As the design of the site is being finalized, to ensure compliance, the following must be provided:
    a. The AMMR requesting the Covina BESS be exempt from transmitting signals from the energy storage management system to a remote annunciator as required by LACFC §1207.3.4 must be approved by the AHJ.
    b. Signage must be provided per LACFC §1207.4.8.
    c. The AMMR requesting the Covina BESS be permitted to exceed the size and separation requirements of LACFC §1207.5.1 must be approved by the AHJ.
    d. The AMMR requesting the Covina BESS be permitted to exceed the maximum allowable quantity requirements of LACFC §1207.5.2 must be approved by the AHJ.
    e. The AMMR requesting the Covina BESS be permitted to utilize gas detection in lieu of smoke or radiant energy-sensing fire detection within the MP2XL as required by LACFC §1207.5.4 must be approved by the AHJ.
    f. The AMMR requesting the Covina BESS be exempt from the fire suppression requirements of LACFC §1207.5.5 must be approved by the AHJ.
    g. The AMMR requesting the Covina BESS be exempt from the exhaust ventilation requirements of LACFC Table 1207.6 and §1207.6.1 must be approved by the AHJ.
    h. Fire apparatus access roads must be approved by the AHJ per LACFC §503.

i. Fire hydrant locations must be approved by the AHJ per LACFC §507.

2. The HMA demonstrates the Covina BESS meets all the HMA performance criteria for approval outlined in LACFC §1207.1.4.2, as follows:

   a. Fires will be contained within unoccupied ESS rooms or areas for the minimum duration of the fire-resistance rated separations identified in Section 1207.7.4. (LACFC §1207.1.4.2 #1)

   b. Fires in occupied work centers will be detected in time to allow occupants within the room or area to safely evacuate. (LACFC §1207.1.4.2 #2)

   c. Toxic and highly toxic gases released during fires will not reach concentrations in excess of the IDLH level in the building or adjacent means of egress routes during the time deemed necessary to evacuate occupants from any affected area. (LACFC §1207.1.4.2 #3)

   d. Flammable gases released from ESS during charging, discharging, and normal operation will not exceed 10 percent of their LFL. (LACFC §1207.1.4.2 #4)

   e. Flammable gases released from ESS during fire, overcharging, and other abnormal conditions will be controlled through the use of ventilation of the gases, preventing accumulation, or by deflagration venting. (LACFC §1207.1.4.2 #5)

In summary, based on the UL 9540A testing and a review of the drawing set, the Covina BESS can meet the Hazard Mitigation Analysis approval criteria presented in the LACFC upon the inclusion of any listed missing requirements, as described above.

1.0 INTRODUCTION

FRA performed an HMA for the BESS proposed for installation at the Covina BESS located in Covina, California. The HMA was performed in accordance with the requirements of the 2023 LACFC, which adopts the 2022 California Fire Code, as well as local amendments to this code. The Covina BESS is anticipated to initially include 132 MP2XL cabinets manufactured by Tesla and will have an approximate capacity of 110 MW/440 MWh. The Covina BESS includes an augmentation plan of 29 MP2XLs. This HMA report has been prepared by FRA and summarizes our analysis. It is intended to be used as a tool for an FCO or an AHJ to assist in their review of the Covina BESS.

1.1 Purpose and Scope

The LACFC requires an HMA to evaluate the consequences associated with the following failure modes and any others deemed necessary by the FCO. Note, only single failure modes must be considered in this analysis (LACFC §1207.1.4.1):

1. Thermal runaway condition in a single BESS rack, module, or unit.
2. Failure of any battery (energy) management system.
3. Failure of any required ventilation or exhaust system.
4. Voltage surges on the primary electric supply.
5. Short circuits on the load side of the ESS.
6. Failure of the smoke detection, fire detection, fire suppression or gas detection system.
7. Required spill neutralization not being provided or failure of the secondary containment system.
8. Failure of temperature control.

The AHJ or FCO is authorized to approve the HMA provided the analysis demonstrates each of the following (LACFC §1207.1.4.2):

1. Fires will be contained within unoccupied ESS rooms or areas for the minimum duration of the fire-resistance rated separations identified in §1207.7.4.
2. Fires in occupied work centers will be detected in time to allow occupants within the room or area to safely evacuate.
3. Toxic and highly toxic gases released during fires will not reach concentrations in excess of the IDLH level in the building or adjacent means of egress routes during the time deemed necessary to evacuate occupants from any affected area.
4. Flammable gases released from ESS during charging, discharging, and normal operation will not exceed 10 percent of their LFL.

5. Flammable gases released from ESS during fire, overcharging, and other abnormal conditions will be controlled through the use of ventilation of the gases, preventing accumulation, or by deflagration venting.

The framework for this analysis is as follows:

- **Review the MP2XL and UL 9540A test data**: FRA reviewed the MP2XL, its construction, design, fire safety features, listings, and UL 9540A fire test data (see Section 2.0 and 3.0).
- **Review site specifications:** FRA reviewed the proposed Covina BESS site layout and installation including the area surrounding the BESS (see Section 4.0).
- **Prescriptive code compliance review:** The proposed site layout and site response plans/training procedures were reviewed for compliance with the LACFC requirements. Where gaps were identified in the BESS installation and response plans/training procedures, recommendations were provided (see Section 5.0 and 6.0, respectively).
- **Hazard Mitigation Analysis:** The HMA evaluates the BESS failure modes as required by the LACFC. The consequence-based analysis considers product level and site level barriers to prevent failure or reduce the consequences of a failure scenario. Based on the provided barriers, the consequences of a failure event are analyzed. The LACFC details acceptance criteria for which the FCO or AHJ is authorized to approve the HMA provided the consequences of the analysis meet or exceed the criteria (see Section 7.0).
- **Recommendations:** Recommendations are provided throughout the report where gaps exist between the site design and code requirements and where the consequences of failure modes exceed the approval criteria (see Section 8.0).

1.2 Applicable Codes and Standards

The following codes and standards are applicable to the Covina BESS Facility in Covina, California:

- California Fire Code – 2022 Edition (CFC)
- California Senate Bill 38 (CA SB38)
- Los Angeles County Fire Code – 2023 Edition (LACFC)
- FM Property Loss Prevention Data Sheet 5-4, Transformers, Interim Revision October 2025 (FMDS 5-4)
- NFPA 68, Standard on Explosion Protection by Deflagration Venting, 2019 Edition (NFPA 68)

- IEC 62619, Secondary cells and batteries containing alkaline or other non-acid electrolytes – Safety requirements for secondary lithium cells and batteries, for use in industrial applications, Edition 1.0, 2017 (IEC 62619)
- UL 1642, Lithium Batteries, Edition 6, September 29, 2020 (UL 1642)
- UL 1973, Standard for Batteries for Use in Stationary, Vehicle Auxiliary Power and Light Electric Rail (LER) Applications, Edition 3, February 25, 2022 (UL 1973)
- UL 9540, Standard for Safety of Energy Storage Systems and Equipment, Edition 2, February 27, 2020 (UL 9540)
- UL 9540A, Test Method for Evaluating Thermal Runaway Fire Propagation in Battery Energy Storage Systems, Edition 4, November 12, 2019 (UL 9540A)

1.3 Reference Materials

The following reference materials were reviewed as part of this analysis:

- Drawing packages provided for the Covina BESS (the drawing set)
  - Electrical Consultants, Inc. 30% Issued for Review, March 6, 2024
- MP2XL Design and Installation Manual – Rev. 2.2, dated January 10, 2025 (MP2XL DIM)
- MP2XL Operation and Maintenance Manual – Rev. 1.2, dated January 30, 2024 (MP2XL O&MM)
- Industrial Lithium-Ion Battery Emergency Response Guide – Rev. 2.7, dated February 16, 2024 (ERG)
- MP2XL System Specification – Rev. 1.1, dated January 30, 2024
- MP2XL Compliance Packet – Rev. 2.8, dated February 14, 2024
- MP2XL Fire Protection Engineering and UL 9540A Interpretation Report Rev0, dated April 3, 2024 (MP2XL FPE Report)

1.4 Supplemental Documents

The following supplemental documents are provided as part of this analysis:

1.7 Limitations

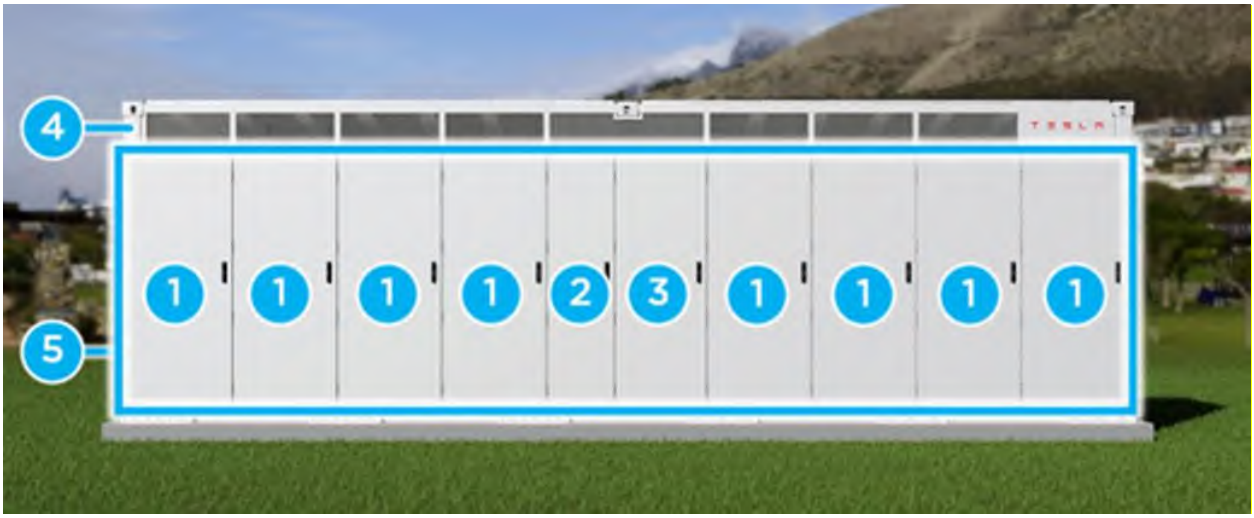
At the request of RWE Clean Energy, FRA performed an HMA in accordance with the requirements of the LACFC for the Covina BESS located in Covina, CA. The scope of services performed during this analysis may not adequately address the needs of other users of this report, and any re-use of this report or its conclusions presented herein are at the sole risk of the user. The opinions and comments formulated during this assessment are based on observations and information available at the time of the analysis, which has been provided to FRA by others. No guarantee or warranty as to future performance of any reviewed condition is expressed or implied.

2.0 MP2XL DESCRIPTION

The MP2XL is a fully integrated BESS consisting of battery modules, power electronics, control systems, a battery management system, a thermal management system, and an explosion control system all pre-assembled within a single, non-occupiable cabinet. The MP2XL has a standardized, modular design that is not customizable or adjustable. MP2XL arrives at the site fully assembled needing just the alternating current (AC) connection and communications cables to be connected on the site. Thus, every installation has the same MP2XLs that are pre-assembled at the factory and delivered to the site. The MP2XL is approximately 28.9 ft in length, 5.4 ft deep, 9.2 ft in height, and can weigh up to 84,000 pounds (8.800 m × 1.650 m × 2.785 m and 38,100 kg). Below is a brief description of the MP2XL, its components, design listing, and fire safety features. For a more detailed discussion of the MP2XL components, their location, functionality, and purpose, refer to the MP2XL DIM.

2.1 Cabinet Layout

The MP2XL is intended for outdoor installations, ground-mounted to a foundation or base strong enough to support the weight of the equipment and anchor loads (including concrete pads, grade beams, etc.). The thermal roof (part of the MP2XL's thermal management system) is enclosed within an IP20 enclosure that sits above the battery module bays, as shown in Figure 1.



(1) Battery Module Bays (2) Thermal Bay (3) Customer Interface Bay
(4) IP20 Thermal Roof Enclosure (5) IP66 Enclosure

Figure 1. MP2XL internal components

The lithium-ion batteries are housed inside an IP66 steel enclosure (battery module bay) that provides protection against particle and water ingress coming into contact with the battery modules and power electronics. The IP66 enclosure is one continuous unit, meaning each of the eight bays is open to one another. However, when the MP2XL is populated with battery modules, it cannot be entered. This modular, cabinet-style approach allows for the system to be easily maintained and

serviced from outside the cabinets (i.e., the battery modules, thermal management system, and power electronics are serviced through doors located on the front of the cabinets or from the top through the thermal roof), thus eliminating the need for personnel to enter an enclosure, structure, building or container to perform those activities. Since the BESS cabinets do not permit walk-in access, it is a non-walk-in style (NWI) BESS, they are not defined as occupied buildings or structures per the LACFC.

2.2 Cells and Battery Modules

The MP2XL can be populated with up to twenty-four battery modules with a maximum storage capacity of 3,916 kWh. The Covina BESS will utilize the 24-battery module MP2XL capable of providing a capacity of 3,916 kWh over a duration of 4 hours. Each battery module contains three battery trays, as shown in Figure 2, which are arrays of prismatic, lithium iron phosphate (LFP) cells. The LFP cells (the cells) utilized in the MP2XL are 157.2-amp hour (Ah) with a nominal voltage of 3.22 volts (V) and are individually hermetically sealed. They are approximately 2 inches tall by 6.5 inches in length by 6.6 inches in width and weigh 6.6 pounds (50.75 mm x166.0 mm x 169.3 mm and 2,991 g). Each battery tray contains 112 cells; therefore, each battery module has 336 cells. In total, the 24-battery module MP2XL being installed at the Covina BESS will have 8,064 cells.

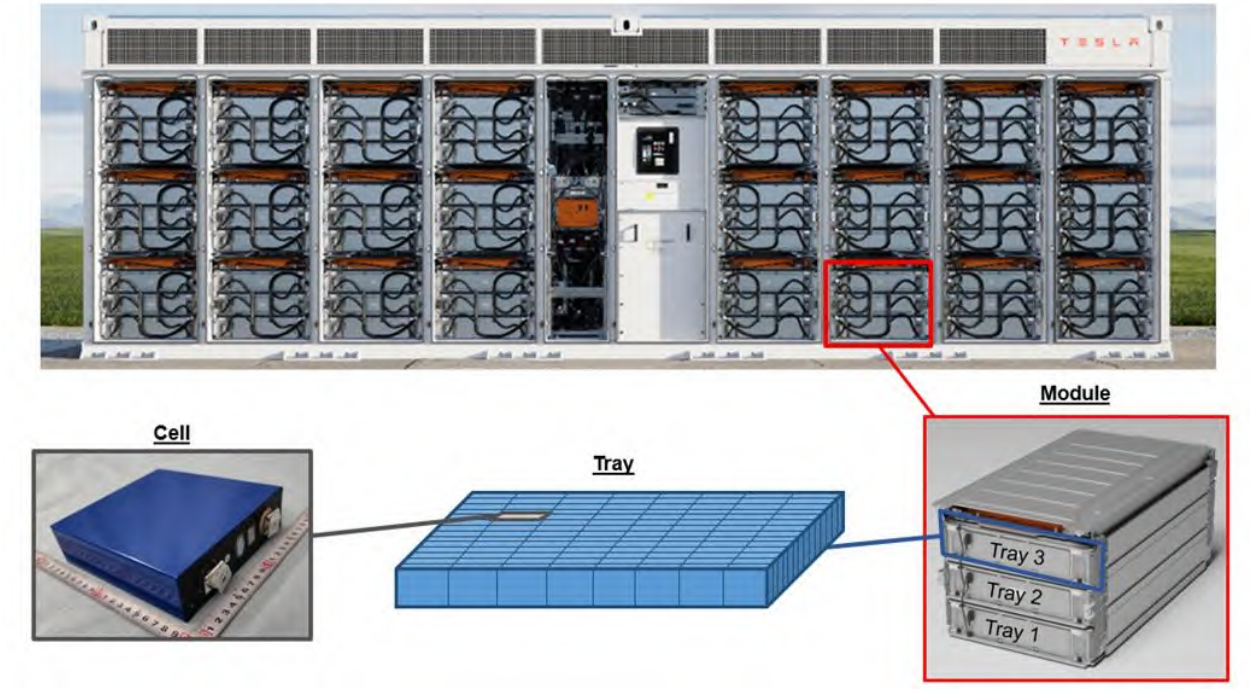


Figure 2. MP2XL unit, module, generalized tray, and an individual cell

2.3 Customer Interface Bay

The Customer Interface Bay (CIB) is a single bay that includes all the external connections needed for initial MP2XL installation. When the fully assembled MP2XL arrives at the site, the only work

necessary inside the cabinet is performed inside the CIB which includes the AC and communications cable connections. Once installed, the CIB is a user-accessible area designed for operation and servicing. The CIB, as shown in Figure 1, includes the main AC breaker, a status panel and controller area network (CAN) interface for service personnel, customer input/output (I/O) terminals, and the keylock switch (a "Lock Out/Tag Out" switch), which shuts down the AC bus to permit MP2XL maintenance by service personnel.

2.4 Thermal Management System

The thermal management system (TMS) provides a suitable operating temperature for MP2XL. The thermal bay and thermal roof house the components of the TMS. The TMS contains a closed-loop liquid cooling system that circulates a 50/50 mixture of ethylene glycol and water throughout the battery modules and power electronics to maintain an optimum battery operating temperature. The TMS works autonomously and does not require user feedback or controls to turn the system on when needed or to adjust temperature settings. The thermal cabinet includes pumps that circulate the liquid coolant through the MP2XL, an in-line heater that can warm the coolant, and a compressor that maintains thermal control for the cabinet. The thermal roof, located above the battery bays within its own IP20 enclosure, provides a ventilation airspace for the MP2XL. It contains fans and radiators that cool the ethylene glycol-water solution. Cool air enters the thermal roof through the grates on the front of the MP2XL. The cool air then passes over the radiators, absorbing heat, and then is exhausted out of the top of the thermal roof via exhaust fans, as shown in Figure 3. The liquid cooling system utilizes approximately 400 liters (106 gallons) of the ethylene glycol-water solution, and the compressor utilizes 1.5 kilograms (3.3 pounds) of R-134a refrigerant for the 4-hour duration MP2XL.

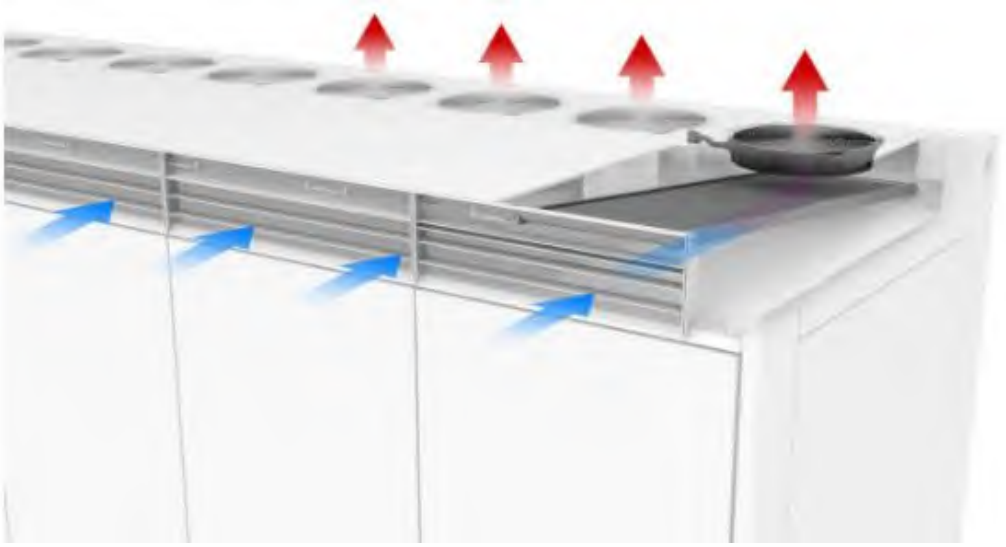

Figure 3. Airflow through the thermal roof

2.5 Battery Management System

The MP2XL has an integrated battery management system (BMS) that tracks the performance, voltage, current, and state of charge (SOC) of the cells (among many other datapoints). The BMS is a layered system, where each battery module has its own BMS and the MP2XL itself has a bus controller supervising the output of all the battery modules at the AC bus level. The BMS is engineered to react to fault conditions in an autonomous manner, with safeguards built into the firmware. These fault conditions include, but are not limited to, over-temperature, loss of communication, over-voltage, and isolation. For instance, to prevent a cell over-temperature the TMS is enabled by the BMS to cool the cells/module. This action by the BMS (which is just one example of many ways the BMS can respond to a fault condition) can either prevent thermal runaway from occurring in the cell or prohibit the propagation of thermal runaway to adjacent cells. Depending on the severity of the fault condition, the BMS can automatically isolate the affected battery module temporarily (less severe fault) or it can permanently disconnect the module.

2.6 System Controller and Monitoring

Beyond the built-in safeguards of the BMS described above, the MP2XL is supported by Tesla's Local Operations Center (LOC), which is designed to support the global fleet of energy storage products. The MP2XL has 24/7 remote monitoring, diagnostics, and troubleshooting capabilities, without needing a Tesla technician on site. Customers and first responders also benefit from immediate hotline support from trained technicians via these LOCs. Additionally, the local energy provider or the facility monitors the MP2XL through a local Supervisory Control and Data Acquisition (SCADA) system. All faults are transmitted to a Tesla LOC, alerting them to abnormal conditions that may require corrective action, either through remote means or an in-person field service visit. This communication link is accomplished via the Tesla System Controller (TSC). The TSC provides the single point of interface for the utility, network operator, and/or the customer's SCADA systems to control and monitor the entire energy storage site. It dictates the charge and discharge functions of the MP2XLs, aggregating real-time information and using the information to optimize the commands sent to each individual MP2XL. As such, every MP2XL has a wired Ethernet connection to the TSC, which communicates with a Tesla LOC via a built-in cellular modem. If the cellular network in the installation area is not sufficient, a hardwired internet connection can be provided. Additionally, if the BESS owner or operator wants a network connection for a control interface, the TSC becomes that point of connection to the MP2XL at the site.

2.7 Electrical Fault Protection Devices

The MP2XL has several passive and active safety control mechanisms installed within the battery module circuit and distribution circuit that would be available to interrupt a fault current. At a high level, these electrical fault protection features include:

- **Battery module overcurrent protection:** The battery modules contain direct current (DC) single-use fusible links mounted directly on the battery modules. These fuses are one-time only use safety devices that can interrupt the flow of an overcurrent in the battery module during an abnormal electrical event.
- **Inverter DC protection:** The inverter modules, which are installed at each of the battery modules, are equipped with high-speed pyrotechnic fuses that can isolate the battery module passively or actively during an abnormal event.
- **Inverter AC protection:** In addition, each inverter module is equipped with its own AC contactor and AC fuses should an abnormal electrical event occur at the inverter module on the AC side of the circuit.
- **Ground fault protection**: Finally, the MP2XL is also provided with a DC ground fault detection system. It measures insulation resistance prior to operation and looks for excessive leakage current during operation. Additionally, the MP2XL also contains an AC circuit breaker, with ground-fault trip settings, which is installed within the CIB to provide distribution system protection.

2.8 Explosion Control System

The MP2XL includes an explosion control system to mitigate the risk of an uncontrolled deflagration. The system includes pressure-sensitive vents (overpressure vents) and sparkers installed throughout the battery module bay. The sparkers are designed to ignite flammable gases early in a thermal runaway event before the gases accumulate within the enclosure and become an explosion hazard. They are installed at a variety of locations and heights throughout the battery module bays to ensure the flammable gases released during thermal runaway quickly meet an ignition source regardless of the initial release location. Note, this explosion control system has been extensively validated through installation level testing for previous versions of the Megapack as well as the MP2XL and its performance has been demonstrated in the field during thermal events involving Megapacks.

The overpressure vents are installed in the roof of the sealed battery bay's IP66 enclosure, as shown in Figure 4. When activated, they open up into the enclosed thermal roof, ensuring that their release does not create a projectile hazard. In addition, since they are installed in between the battery module bays and the thermal roof, the overpressure vents are not exposed to the environment, which means they are protected from the elements, such as falling tree limbs or snow, which could impact their functionality.

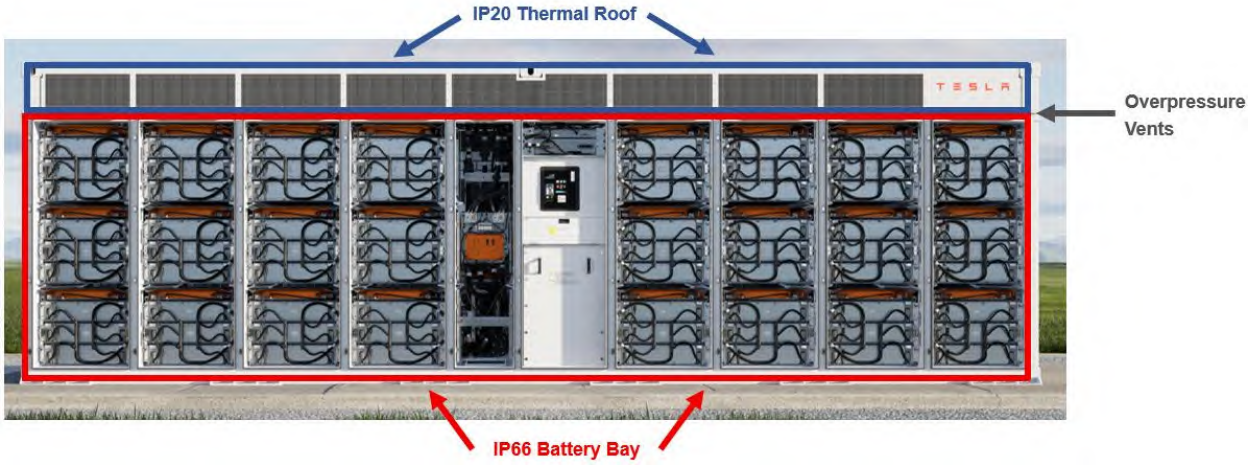

Figure 4. Location of overpressure vents

Once opened, the overpressure vents permit gases, products of combustion, and flames to safely exhaust through the roof of the MP2XL during a thermal event. By designing this natural ventilation flow path, flammable gases are not permitted to accumulate within the MP2XL, reducing the risk of a deflagration or explosion that could compromise the MP2XL's integrity, push open the front doors, or expel projectiles from the MP2XL. In addition, the ventilation path creates a controlled fire condition, should one occur, out of the top of the MP2XL. By maintaining the MP2XL's integrity, keeping all the doors shut during a fire event, reducing the risk of projectiles, and creating a controlled path for flames to exit the top of the MP2XL, the likelihood of a thermal event having an impact on life safety, site personnel or first responders, is reduced. In addition, by maintaining these features, the likelihood of a fire propagating to adjacent MP2XLs, electrical equipment, or other exposures is also reduced.

The overpressure vents themselves are passive and are not actuated or controlled by another device. They are designed to release during an overpressure event, such as the rapid ignition of flammable gases by a sparker. The number and total area of overpressure vents were sized following the guidance of NFPA 68 with a safety factor of two times the enclosure's strength, including the front doors. Tesla developed the overpressure vents and sparker system because the direct application of NFPA 68 or NFPA 69 is not suitable for MP2XLs, which do not have large volumes of open-air space. This engineered approach is permitted by NFPA 855 §9.6.5.6.4 (2023) provided it is validated by installation-level fire and explosion testing and an engineering evaluation, which Tesla has performed.

2.9 Fire Detection and Suppression

The MP2XL does not typically have an internal fire detection or fire suppression system that is integral to its design/construction. However, the MP2XL will be modified at the Covina BESS site to include four (4) internal gas detectors to satisfy the fire detection requirements of LACFC

§1207.5.4. Two (2) gas detectors will be mounted and vertically stacked on the hinge side of the Bay 3 and Bay 9 doors for a total of four (4) detectors.

2.10 Clearances

The MP2XL is provided with a series of passive fire protection schemes (barriers) to reduce the likelihood of thermal runaway from spreading from module-to-module and reduce the likelihood of a fire from spreading unit-to-unit. The MP2XL can be installed side-to-side with a clearance distance of 6 inches and back-to-back with a clearance distance of 18 inches (or 9 inches with prior Tesla approval). A minimum of 8 feet clearance must be provided in front of adjacent MP2XLs. These clearances are based on UL 9540A testing, additional large-scale fire tests and fire modeling results that demonstrate a fire will not propagate from one MP2XL to adjacent MP2XLs under the tested conditions.

2.11 Emergency Response

Tesla developed an MP2XL commissioning protocol, design and installation manual (DIM), an operations and maintenance manual (O&MM), and a lithium-ion battery emergency response guide (ERG) to provide guidance to anyone designing, installing, commissioning, operating, maintaining, servicing, decommissioning, or responding to an emergency involving an MP2XL. These manuals and guides can be utilized by site owners/operators to develop their own site-specific documents, such as commissioning plans, decommissioning plans, emergency operations plans (EOP), or emergency response plans (ERP).

2.12 MP2XL Product Listings

The MP2XL and its subcomponents are certified or listed to multiple national and international product design standards. These certifications and listings apply to the cells, battery modules, inverters, power electronics, control systems, integration between the BESS and the grid, as well as the BESS as a whole. The standards highlighted below pertain to the lithium-ion cells, the battery modules and the MP2XL at the unit level. For a full listing of all certifications and listings for all the MP2XL components, please refer to the MP2XL Compliance Packet.

Table 1. MP2XL Product Listings

Listing Standard		Description
Cell/ Module Level	UL 1642	This certification standard is applicable to secondary (rechargeable) lithium-ion cells and batteries used as a power source (such as BESS). The standard's requirements are intended to reduce the risk of fire or explosion when the battery is used in a product. For example, the standard subjects lithium-ion batteries to severe abuse conditions and evaluates if they can safely withstand them.
	UL 1973	This certification standard is applicable to batteries and battery systems utilized for energy storage. The standard evaluates the battery system's ability to safely withstand simulated abuse conditions. For example, the standard subjects module-level stationary batteries to an internal fire exposure test to force a thermal runaway in one cell to ensure it does not explode, propagate fire to neighboring cells, or propagate to the rest of the modular battery system. UL 1973 applies to stationary BESS applications, such as photovoltaic installations and wind turbine energy storage systems (ESS), as well as other specialized ESS, such as light electric rail (LER) operations.
	IEC 62619	This safety standard specifies requirements and tests to ensure the safe operation of secondary (rechargeable) lithium-ion cells and batteries used in ESS and in other industrial applications. Electrical safety is covered under Clause 8 of the standard, which requires the completion of a risk analysis to determine specific electrical safety issues associated with the intended use of a given battery system or device.
MP2XL Level	IEC 92933-5-2	This safety standard addresses various aspects of BESS, including the requirements for grid-integrated BESS.
	UL 9540	This standard covers ESS (including lithium-ion BESS) for stationary indoor and outdoor installations and establishes the system-level certification for ESS and their associated equipment.
	UL 9540A	The test methodology evaluates the fire characteristics and thermal runaway fire propagation of a BESS (including lithium-ion BESS). The test method provides a means to evaluate thermal runaway and fire propagation at the cell level, module level, and unit level. The data generated from the test method can be used to determine the fire and explosion protection required for a BESS installation based on fire test data. This test is specifically referenced by the CFC and NFPA 855 to demonstrate the functionality of the BESS fire protection features during large-scale fire testing.

Note: Additional equipment or devices added inside the MP2XL cabinet, including but not limited to fire alarm devices, gas detectors, wiring, and/or conduits that are presently included in the design of the Covina BESS, are not included as part of the current MP2XL UL 9540 listing. FRA is not the listing agency for this product and does not know what impact these additions/product modifications would have on the MP2XL or its listing. This determination would need to be evaluated by the MP2XL listing agency.

3.0 MP2XL UL 9540A TESTING

The UL 9540A test method provides a method to evaluate thermal runaway and fire propagation of a lithium-ion BESS at the cell level, module level, unit level, and installation level. The data generated from the test method can be used to determine the fire and explosion protection systems/features required for a BESS installation. This includes, but is not limited to, thermal runaway characteristics of the cell; cell thermal runaway gas composition; the fire propagation potential from cell to cell, module to module, and unit to unit; products of combustion; heat release rate; smoke release rate; and performance of fire protection systems.

Initially, cells are tested to determine if further testing is required. Module level testing is required if the following observations are recorded during cell level testing:

- Thermal runaway is induced in the cell; and,
- The cell vent gas is flammable in air when tested in accordance with ASTM E918.

Module level testing examines the module design, heat release rate, gas generation, external debris, and flying debris hazards. Unit level testing is required if the following observations are recorded during module level testing:

- Module design is unable to contain thermal runaway; and,
- Cell vent gas is flammable.

Unit level testing assesses the BESS design of the unit, heat release rate, gas generation and composition, deflagration and flying debris hazards, BESS and wall surface temperatures, heat flux at the target walls, and reignition. Installation level testing is required if the following observations are recorded during unit level testing:

- Flaming is observed outside the initiating BESS unit;
- Surface temperature of the modules in the adjacent BESS unit exceeds the temperature at which cell level gas venting occurred;
- Surface temperatures of wall surfaces increase more than 175ºF (79.4ºC) from ambient; and,
- Explosion hazards are observed.

Installation level testing assesses the effectiveness of fire protection systems installed as mitigation methods for the BESS in its intended installation configuration.

A summary of the cell, module, and unit-level test results for the MP2XL are provided below.

3.1 UL 9540A Cell Level Summary

Cell-level testing was conducted at UL in December 2021. UL is an OSHA-approved Nationally Recognized Testing Laboratory (NRTL) and offers the UL mark for products. Testing was

performed on five model CB5T0, 3.22 V, 157.2 Ah, LFP cells manufactured by Contemporary Amperex Technology Co., Ltd. (CATL) for use in the MP2XL. Each cell was charged to 100% state of charge (SOC) prior to testing. Thermal runaway was initiated via film strip heaters installed on both of the wide side surfaces of each cell, meaning two heaters were installed on each cell, as shown in Figure 5. The heaters were programmed to increase the temperature of the cell's surface by approximately 4.5°C per minute until the cell vented and went into thermal runaway. The cell was placed within an enclosed enclosure and the products released during testing were collected and analyzed.

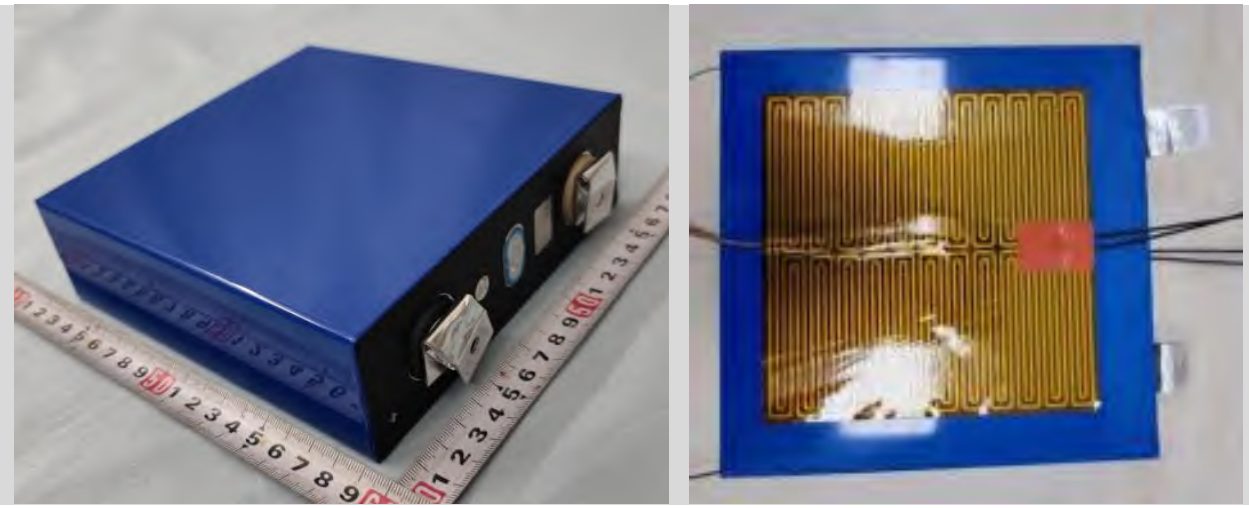

Figure 5. Individual cell tested to UL 9540A (left) and installed film strip heater (right)

3.1.1 Key Takeaways and Results

Key takeaways from the tests include:

- The average cell vent and thermal runaway temperature was determined to be 174°C (345°F) and 239°C (462°F), respectively, as listed in Table 2.
- 93.3 liters of cell vent gases were released.
- The cell vent gas mixture is flammable and has an LFL of 7.15% at ambient temperature.
- The cell vent gases were predominantly (approximately 95%) Carbon Monoxide (CO), Carbon Dioxide (CO2), Hydrogen (H2), and Methane (CH4), as listed in Table 3.
- Toxic gases sometimes associated with lithium-ion batteries, such as Hydrogen Fluoride (HF), Hydrogen Chloride (HCl), and Hydrogen Cyanide (HCN) were not vented from the cell.

Table 2. UL 9540A Cell Level Testing: Key Flammability Characteristics

Flammability Property	Value
Average cell surface temperature at gas venting	174°C
Average cell surface temperature at thermal runaway	239°C
Cell vent gas volume released	93.3 L
LFL, % volume in air at the ambient temperature	7.15%
LFL, % volume in air at the venting temperature	6.05%
Burning Velocity (Su)	90.0 cm/s
Maximum pressure (Pmax)	98.46 psig

Table 3. UL 9540A Cell Level Testing: Cell Vent Gas Composition (Excluding O_2 and N_2)

Gas Name	Chemical Structure	% Measured	Component LFL
Carbon Monoxide	CO	10.881	10.9
Carbon Dioxide	CO_2	27.107	N/A
Hydrogen	H_2	50.148	4.0
Methane	CH_4	6.428	4.4
Acetylene	C_2H_2	0.264	2.3
Ethylene	C_2H_4	3.283	2.4
Ethane	C_2H_6	1.100	2.4
Propene	C_3H_6	0.379	1.8
Propane	C_3H_8	0.125	1.7
-	C_4 (Total)	0.190	N/A
-	C_5 (Total)	0.027	N/A
-	C_6 (Total)	0.005	N/A
Benzene	C_6H_6	0.002	1.2
Toluene	C_7H_8	0.002	1.0
Dimethyl Carbonate	$C_3H_6O_3$	0.055	N/A
Ethyl Methyl Carbonate	$C_4H_8O_3$	0.004	N/A
Total	-	100	-

3.1.2 Performance Criteria

UL 9540A, Section 7.7 outlines the performance criteria for the cell level test. If all these conditions are met, further testing (such as module, unit, or installation level tests) are not required. The acceptable performance criteria during the UL 9540A cell level test are as follows:

1. Thermal runaway cannot be induced in the cell.

2. The cell vent gas does not present a flammability hazard when mixed with any volume of air, at both ambient and vent temperatures.

Given the cell went into thermal runaway and vented flammable gases, UL 9540A module level testing was required.

3.2 UL 9540A Module Level Summary

Module level testing was conducted at a TÜV SÜD (TÜV) laboratory in May 2022. TÜV is an OSHA-approved NRTL and offers the cTÜVus mark, which is equivalent to other NRTL marks such as UL, ETL or CSA. Testing was performed on a 360.64 V, 157.2 Ah, MP2XL tray (model MP2 Module), manufactured by CATL, as shown in Figure 6. Each tray consists of 112 CATL model CB5T0 LFP cells that were charged to 100% SOC prior to testing. During the test, the MP2XL tray was not connected to the BMS or TMS, i.e., they were not actively operating to prevent thermal runaway in a cell or to prohibit the propagation of thermal runaway from cell to cell. Thermal runaway was initiated via film strip heaters installed on both of the wide side surfaces of two cells, similar to the cell level test (see Figure 5). This resulted in the simultaneous heating of six cells forcing multiple cells into thermal runaway at approximately the same time. The heaters were programmed to increase the temperature of the cell's surface by approximately 4.17 - 4.52°C per minute until the cells vented and went into thermal runaway. The tray was placed under an instrumented hood and the products released during combustion were collected for analysis.

Figure 6. Tray tested to UL 9540A module level testing

3.2.1 Key Takeaways and Results

This simultaneous heating of six cells forced multiple cells to go into thermal runaway that propagated from the initiating cells to all the cells in the MP2XL tray. Once ignited, the MP2XL tray fire appeared to be a slow-progressing thermal event that took approximately 30-35 minutes to burn itself out. Sparks and flying debris were observed during the test; however, there were no explosive discharges of gases. Products of combustion were collected in the hood and flammable gases were identified. Key takeaways from the UL 9540A module level test include:

- Thermal runaway propagated from the initiating cells to all the cells in the MP2XL tray.
- The MP2XL tray fire appeared to be a slow-progressing thermal event requiring over 30 minutes to burn itself out.
- Sparks and flying debris were observed, however, there were no explosive discharges of gases.
- Products of combustion were collected, as listed in Table 4.
- Toxic gases sometimes associated with lithium-ion batteries, such as HF, HCl, and HCN, were not detected during the combustion of the MP2XL tray.

Table 4. UL 9540A Module Level Testing: Products of Combustion

Gas Name	Chemical Structure	Measurement Peak (ppm)	Detection Method
Carbon Monoxide	CO	205	FTIR
Carbon Dioxide	CO_2	6721	FTIR
Methane	CH_4	68.8	FTIR
Acetylene	C_2H_2	17.1	FTIR
Ethene	C_2H_4	Not Detected	FTIR
Ethane	C_2H_6	Not Detected	FTIR
Propane	C_3H_8	Not Detected	FTIR
Butane	C_3H_4	Not Detected	FTIR
Pentane	C_3H_6	Not Detected	FTIR
Benzene	C_6H_6	9.0	FTIR
Hexane	C_7H_{14}	Not Detected	FTIR
Hydrofluoric Acid	HF	Not Detected	FTIR
Hydrogen Chloride	HCl	Not Detected	FTIR
Hydrogen Cyanide	HCN	Not Detected	FTIR
Hydrogen	H_2	446	Hydrogen Sensor
Total Hydrocarbons	(Propane Equivalent)	247	FID

3.2.2 Performance Criteria

UL 9540A, Section 8.4 outlines the performance criteria for the module level test. If all these conditions are met, further testing (such as unit or installation level tests) are not required. The acceptable performance criteria during the UL 9540A module level test are as follows:

1. Thermal runaway is contained by module design.
2. Cell vent gas is nonflammable as determined by the cell level test.

Given the cell vent gases are flammable (as summarized previously) and thermal runaway was not contained by the module design, UL 9540A unit level testing was required.

3.3 UL 9540A Unit Level Summary

The unit level fire test was conducted at the Northern Nevada Research Center (NNRC) on March 9, 2022, and was witnessed by TÜV. TÜV is an OSHA-approved NRTL and offers the cTÜVus mark, which is equivalent to other NRTL marks such as UL, ETL or CSA. Below is a summary of the UL 9540A unit level fire test results as well as a description of the performance of key fire safety features and systems during the test. This discussion is a summary of the test setup, test data and results. For a full description of the test, please refer to TÜV's UL 9540A unit level test report.

3.3.1 Test Setup and Initiation

The test was performed on a fully populated Megapack 2 (MP2). Note, the MP2XL is the larger version of the MP2. The MP2XL is equipped with 24 battery modules as opposed to the 19 battery modules found in the MP2. Its design, however, is almost identical to the MP2 other than being greater in length to accommodate the additional battery modules, so the MP2XL uses the exact same cells, battery modules, and power electronics (i.e., all the same internal components) that the MP2 utilizes in its design. In addition, the construction of cabinet itself, enclosure strength, and fire safety features, such as the explosion control system, are nearly identical for the two products. Given these similarities, TÜV witnessed and reported on one UL 9540A unit level fire test for the MP2 and MP2XL (i.e., the test and report apply to both models). Given all these similarities and that TÜV has determined one test can be applied to both models, it is also appropriate for this analysis to review the UL 9540A unit level fire test for the MP2 and apply those results to the MP2XL.

The MP2 test unit consisted of 19 battery modules, with a capacity of 3,100.8 kWh, tested at 100% SOC. Of all the MP2 variations, the unit tested during UL 9540A unit level testing is the largest capacity variant Tesla manufactures. In addition, during the test, the BMS and TMS are disabled, i.e., they are not actively operating to prevent thermal runaway in a cell or to prohibit the propagation of thermal runaway from cell-to-cell, or module-to-module. As such, the UL 9540A unit level fire test can be considered a worst-case fire scenario, where: (1) the unit tested was the largest variation in terms of energy capacity; (2) the unit tested was at the highest energy density possible (100% SOC); and (3) the BMS and TMS were disabled and, therefore, unable to actively

respond to the thermal runaway condition. It should be noted that the explosion protection sparker system was active during the test.

The initiating battery module was chosen to be the bottom battery module from Bay 7, in the middle battery tray, as shown in Figure 7. This location was deemed to be the worst-case, given there are battery trays directly above it and below it. In addition, by initiating in the bottom battery module, there are two additional battery modules installed directly above the initiation location. Within the battery tray itself, six interior cells were simultaneously heated via four film heaters (as shown previously in Figure 5). The heaters were programed to provide a heating rate of 5°C (9°F) per minute, as specified by UL 9540A. The number of cells and the location were selected to provide the greatest thermal exposure to adjacent cells to ensure cell to cell propagation during the test. The objective of this initiation method is to simulate a mass failure of multiple cells in a localized area within the same battery module.

Figure 7. MP2 initiation location: Bay 7, bottom battery module within tray 2

Three additional target MP2 cabinets were installed: (1) 6 in (150 mm) behind; (2) 6 in (150 mm) to the side; and (3) 8 ft (2.44 m) in front of the initiating MP2, as shown in Figure 8. The two target MP2 cabinets behind and to the side were populated with 100% SOC battery modules to simulate a multiple MP2 installation and to determine if thermal runaway and/or fire will propagate from one MP2 cabinet to adjacent cabinets at separation distances of 6 in (150 mm). Additionally, a combustible, instrumented wall (wood framing with plywood facing, painted black) was installed 5 ft (1.52 m) on the opposite side of the initiating MP2 to demonstrate if fire could spread to a combustible surface (plywood wall) during the test.

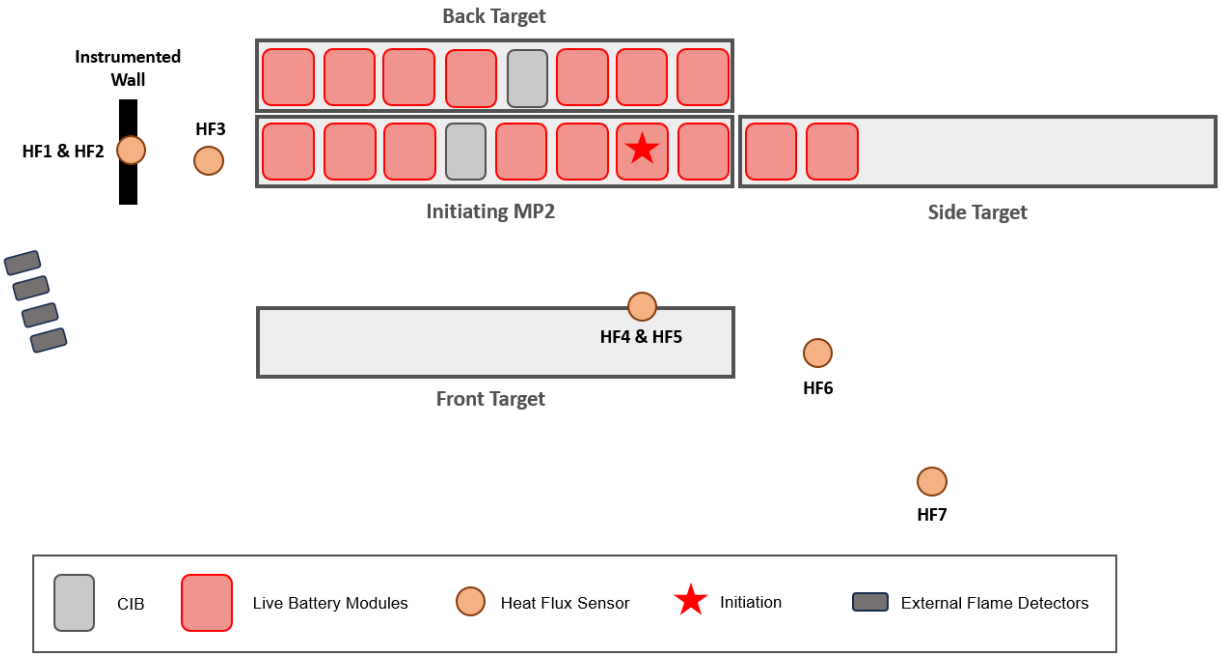

Figure 8. Instrumentation and target MP2 cabinet setup (top view)

3.3.2 Test Results

The cameras and instrumentation were turned on at or around time 0:00:00 (hours: minutes: seconds) and the heaters within the initiating MP2 were turned on at time 0:09:25. They heated six cells simultaneously for over 1 hour and 18 minutes until the first initiation cell reached its thermal runaway temperature of 239°C (462°F). Fifteen minutes later, the second group of initiating cells reached their thermal runaway temperature. Around 6 minutes later (approximately 1 hour and 39 minutes into the test), light smoking/off-gassing was observed exiting the MP2 cabinet in the location where instrumentation was routed into the cabinet (i.e., where thermocouple wiring and power wiring for the film heaters were in contact with the gasket that forms a tight seal for Bay 7's front door). Cell-to-cell propagation (thermal runaway spreading beyond the initial six cells being forcibly heated) was confirmed at approximately 1 hour and 45 minutes when a seventh cell reached a temperature of 239°C (462°F). The heaters continued to run for an additional 5 minutes after this observation and then were shut off (at approximately 1 hour and 51 minutes into the test). Thermocouple temperatures inside the initiating MP2 subsided and no additional off-gassing, smoking, or thermal runaways were observed. By 2 hours and 30 minutes, the test ended. However, a period of observation and data collection continued for hours afterwards to ensure the MP2 did not demonstrate any signs of distress. Table 5 provides a summary of key events from the UL 9540A unit level fire test of the MP2.

Table 5. UL 9540A Unit Level Testing: Timeline of Key Events

Elapsed Time hr:min:sec	Event
00:00:00	**Start of Test.** Cameras and Data acquisition system (DAQ) turned on.
0:09:25	Heaters ON.
1:18:18	First group of initiating cells reach thermal runaway temperature of 239°C (462°F).
1:33:38	Second group of initiating cells reach thermal runaway temperature of 239°C (462°F).
1:39:28	Smoke observed exiting out the bottom of the initiating MP2 cabinet's bay door where instrumentation was routed into the cabinet.
1:45:48	Confirmation of cell propagation to a 7th cell via internal thermocouple measurements.
1:51:09	Heaters turned OFF.
2:00:00	No additional smoke was observed from the initiating MP2 cabinet. Internal temperatures subside.
2:30:00	**End of Test.**
Post Test Overhaul	The initiating MP2 cabinet was observed for several hours afterwards and allowed to cool. No additional off-gassing, smoking, elevated temperatures, fire, thermal runaways, or signs of abnormal conditions were observed.

After 24 hours, the initiating MP2 had not shown any signs of abnormal conditions or distress since the test had concluded (no additional off-gassing, smoking, smells, thermal runaway, or flare ups) and it was opened for inspection. Prior to opening the initiating MP2, handheld gas detection devices were utilized around the cabinets and did not detect the presence of flammable gases, nor were flammable gases detected internally after the Bay 7 door was opened.

3.3.3 Key Takeaways and Results

After the test, analysis of the data and a visual inspection of the initiating MP2 yielded the following observations:

- Over the duration of the test, seven cells went into thermal runaway: the six that were forcibly heated and one additional cell. This demonstrated that cell to cell propagation had occurred during the test, as is required by UL 9540A.
- No other signs of distress were observed in the initiating battery module. Thermal runaway did not propagate beyond the seven cells within Tray 2, nor did it spread to the tray above or below it within the battery module.
- Visible clues of fire damage were not observed to components (plastics, electronics, etc.) adjacent to the seven failed cells. Based on this observation, it is likely that a

sustained fire did not occur around the initiating battery module, even with the failure of seven cells occurring.

- The battery modules within the target MP2 cabinets installed 6 in behind and to the sides were unaffected.
- Heat flux measurements were recorded throughout the UL 9540A unit level fire test at distances of 3, 5, 8, 20 and 30 ft. Since flames did not occur outside the initiating MP2 cabinet, predictably, these measurements were 0.00 kW/m2 throughout the entire test.
- The MP2XL does not have an internal fire suppression system or one that is integral to its design/construction. The UL 9540A unit level fire test results demonstrate that a suppression system is not required to prevent thermal runaway propagation from cell-to-cell, module-to-module, or cabinet-to-cabinet when a near simultaneous failure of up to six cells occurs within the same battery module.
- Explosion hazards, including but not limited to, observations of a deflagration, projectiles, flying debris, detonation, or other explosive discharge of gases were not observed during the test when a near simultaneous failure of up to six cells occurs within the same battery module.
- Internal cell components were observed inside the initiating MP2 cabinet in the area of the initiating battery module and around Bay 7's front door; however, no free-flowing liquid or runoff was observed.
- The overpressure vents in Bay 7 had not opened, indicating that the internal pressure within Bay 7 did not see a significant rise during the failure of the seven cells.
- 24 hours after the conclusion of the test, flammable/toxic gases were not present in the vicinity of the cabinet.

These test results meet all five of UL 9540A's performance criteria for outdoor ground mounted BESS units. The unit level test demonstrated that the near simultaneous failure of six cells within the same battery tray did not lead to flaming combustion nor to a propagating thermal runaway event throughout the MP2 cabinet.

4.0 COVINA BESS SITE

The Covina BESS is proposed for installation in Covina, CA in an industrial area within Los Angeles County. The BESS site location consists of two parcels identified as the east and west yards with a Southern California Edison (SCE) substation in the middle as shown in Figure 9. The west yard is bordered by E Edna Place to the north, the SCE substation to the east, a Metrolink railroad to the south, and auto repair businesses to the west. The east yard is bordered by E Edna Place to the north, businesses to the east and west, and a Metrolink railroad to the south.

Figure 9. Aerial map

4.1 Site Level Fire Safety Features

Based on a review of the drawing set, the Covina BESS will include 132 MP2XLs with a capacity of 110 MW/440 MWh. The site will also include 33 MV transformers and a BESS substation to support the MP2XLs, as shown in Figures 10 and 11.

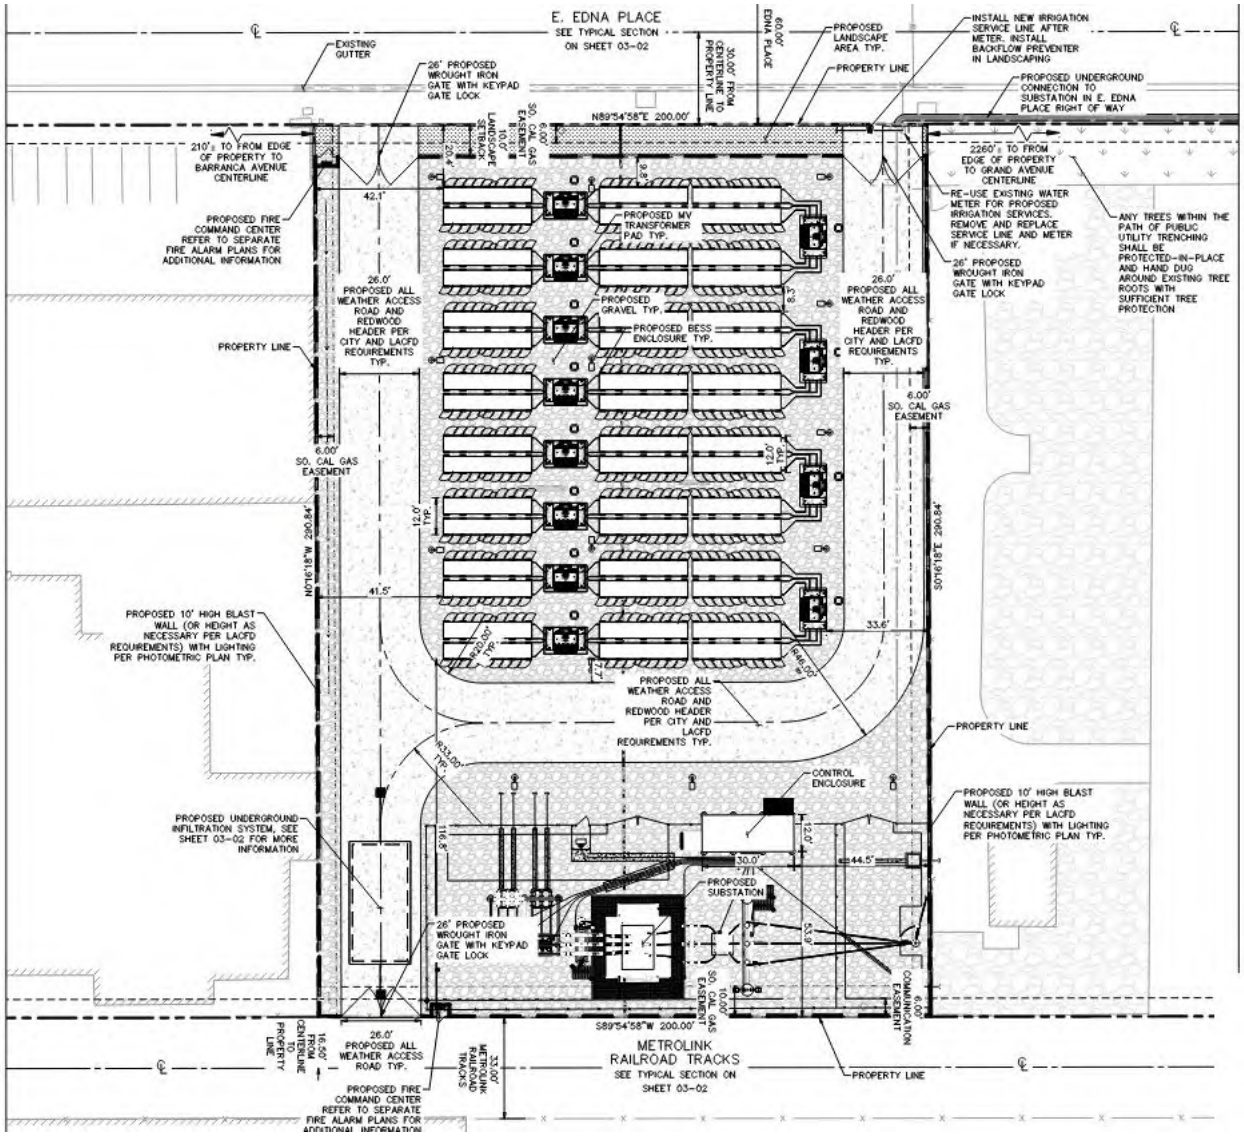

Figure 10. West yard site plan

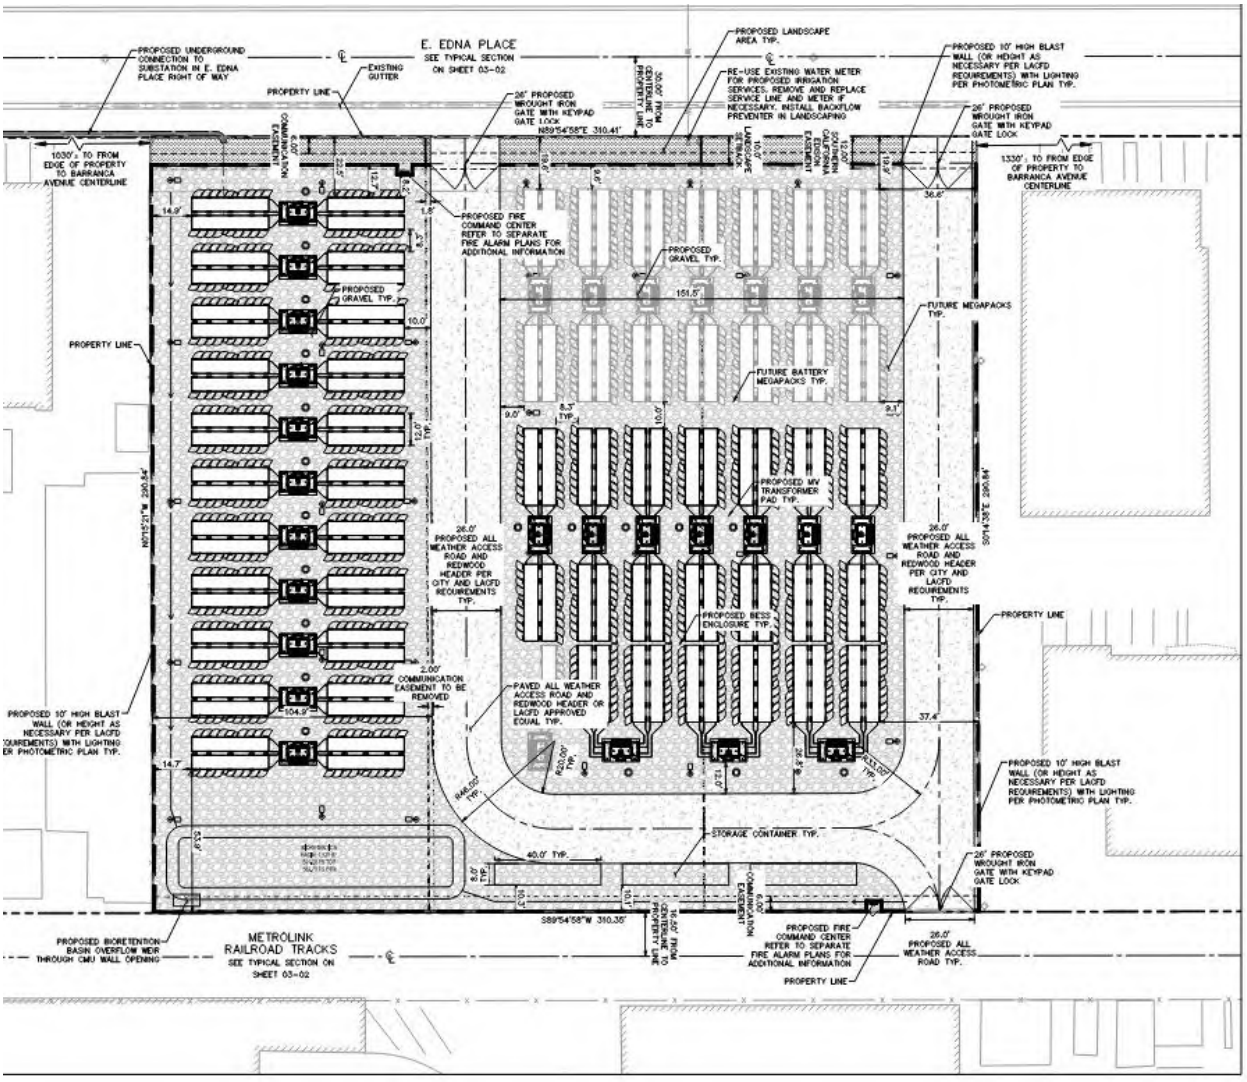

Figure 11. East yard site plan

As shown in the drawing set and the MP2XL product documentation, the Covina BESS will have a number of site-level fire safety systems and features, described in the following sections.

4.1.1 BESS Monitoring and Emergency Notification

The Covina BESS will be remotely monitored by a Tesla LOC. If an abnormal signal is received at the Tesla LOC, they will contact the operation and maintenance (O&M) management organization and the responsible service personnel (O&M service personnel). If necessary, such as the abnormal condition leading to a thermal event, the O&M service personnel responding to the signal will then notify first responders.

4.1.2 Periodic Maintenance

The Covina BESS will be periodically inspected and serviced by trained O&M service personnel from the O&M management organization, as required by Tesla's MP2XL O&MM.

4.1.3 BESS Security

A concrete wall will be installed around the perimeter of the Covina BESS to prohibit access to the MP2XLs. The secured area around each BESS yard at the Covina BESS will include two 26-ft wide vehicle/equipment access gates, located along E Edna Place and the Metrolink Railroad.

4.1.4 Fire Department Access

Los Angeles County Fire Department Station 154 is the closest fire department to the Covina BESS and is less than a mile away. The closest access road to the site is E Edna Place, from which the fire department would turn directly to the site entrance. From there, the site fire apparatus access road on site has the following design features, as shown in Figure 10:

- Unobstructed width of 26 ft and unobstructed vertical clearance.
- Turning radii of no less than 32 ft and no dead-ends.
- Grade not exceeding 15%.
- Constructed of material to provide all-weather driving capabilities.

4.1.5 Emergency Water

Firefighting water will be provided via existing public fire hydrants located on E Edna Place and within the BESS yards, as necessary. The hydrants will be located along the fire apparatus road such that all portions of the facility will be within 400 feet of a hydrant to satisfy LACFC §507.

Note, based on Tesla's UL 9540A unit level fire testing and as outlined in their ERG, manual fire suppression (hose lines) is not required to suppress an MP2XL fire. However, if manual firefighting tactics are used, water is considered the preferred agent for managing lithium-ion battery fires, suppressing nearby combustibles, cooling nearby exposures, and controlling smoke. Other fire suppression methods, such as gaseous agents (CO2, Halon), dry chemical suppressants, or foams, are unlikely to be effective, as stated by Tesla's ERG.

4.1.6 Fire Alarm and Notification System

The MP2XL does not typically have an internal fire detection system that is integral to its design/construction. However, the MP2XL will be modified at the Covina BESS site to include four (4) internal gas detectors to satisfy the requirements of LACFC §1207.5.4. Two (2) gas detectors will be mounted and vertically stacked on the hinge side of the Bay 3 and Bay 9 doors for a total of four (4) detectors. The gas detectors will be monitored by a fire alarm control panel (FACP) that reports signals to an NFPA 72 compliant central station. Additionally, all signals from the FACP will be displayed at the remote annunciator located at the north entrance of each BESS yard.

Visible and audible annunciation of alarm signals received from the gas detectors will be provided in the form of pole mounted horns and beacons located around the perimeter of the facility.

4.1.7 Emergency Stop

An emergency stop (E-Stop) push button will be provided at a location to be determined. This E-Stop can be used for maintenance purposes or during an emergency to isolate the MP2XLs from connected energy sources. Note, a site wide E-Stop should never be initiated without first coordinating with the site and the utility.

4.2 Permanent BESS or Electrical Grid Exposures

The Covina BESS and its associated equipment are intended to operate 24 hours a day, 365 days a year. The Covina BESS will include 132 MP2XLs and 33 MV transformers. The site will also include a BESS substation and auxiliary panel. As described in the drawing set, the clearance distances to permanent electrical exposures associated with the Covina BESS and/or electrical grid are summarized in Table 6.

Table 6. Distance to Permanent Exposures Associated with the BESS or Electrical Grid

Exposure	Distance
BESS Transformer	~ 4 ft
Auxiliary Panel	~ 39 ft
BESS Substation	~ 53 ft
Substation Control Enclosure	~ 53 ft

Please note the following when considering the exposure distances listed in Table 6 above:

- Measurements listed in the above table were taken from the nearest MP2XL.
- Equipment specific to the adjacent substation is not listed within this section as substation drawings are to be provided by the Client.

4.3 Permanent Public Exposure Hazards

All permanently installed public exposures (lot lines, public ways, buildings, stored combustible materials, hazardous materials, high-piled stock, and exposure hazards not associated with electrical grid infrastructure) are at least 10 ft from the closest MP2XL. As described in the drawing set and aerial map, clearance distances to public exposures are summarized in Table 7.

Table 7. Distance to Permanent Public Exposures

Exposure	Distance
Property Line	~ 10 ft
E Edna Place	~ 18 ft
Adjacent Business Property Lines	~ 20 ft
Metrolink Railroad	~ 40 ft

Exposure	Distance
SCE Substation	~ 51 ft
Barranca Avenue	~ 190 ft
N Grandview Avenue	~ 300 ft
Nearest Residences	~ 330 ft

5.0 BESS SITE DESIGN CODE ANALYSIS

Los Angeles County adopts and locally amends the 2023 LACFC, which largely enforces the same requirements as the 2022 Edition of the CFC. Compliance with LACFC §1207 is required when a lithium-ion BESS installation has an energy capacity greater than 20 kWh (LACFC Table 1207.1.1). Since the Covina BESS has an energy capacity of 110 MW/440 MWh, LACFC §1207 requirements apply. Below is a review of the Covina BESS site design for compliance with the LACFC.

Note, this code analysis applies only to site design elements of the Covina BESS pertaining to fire and life safety. Other aspects of the site design, including the electrical or structural design, are outside the scope of this review. As this is a site design review, elements related to the installation itself are also outside the scope of this analysis. It is assumed that the BESS and its associated equipment, including all fire protection systems, will be installed, commissioned, inspected, tested, and maintained as required by the manufacturer(s), the LACFC, and/or other applicable codes and standards.

5.1 Outdoor BESS Classifications

The Covina BESS includes 132 MP2XLs installed outdoors. The MP2XL is a NWI style BESS that is unoccupiable with all internal components accessible via exterior doors. For outdoor BESS installations, the LACFC provides code requirements based on the proximity and location of the BESS equipment from adjacent exposures (LACFC §1207.8). The two outdoor installation classifications are as follows:

- **Remote outdoor installations** – BESS located more than 100 ft from buildings, lot lines that can be built upon, public ways, stored combustible materials, hazardous materials, high-piled stock, and other exposure hazards not associated with electrical grid infrastructure.
- **Installations near exposures** – BESS locations that do not comply with remote outdoor location requirements.

Based on the drawing set, there is less than a 100 ft separation distance between the MP2XLs and the nearest exposures not associated with the electrical grid infrastructure. As such, the Covina BESS is classified as an outdoor installation near exposures for this analysis. LACFC Tables 1207.6 and 1207.8 list the code requirements pertaining to outdoor near exposures lithium-ion BESS installations. These requirements are summarized below in Table 8 and are discussed in detail within the following sections. Other LACFC requirements that apply to all facilities regulated by the LACFC, BESS or otherwise, include fire apparatus access roads (LACFC §503), key boxes (LACFC §506), and fire protection water supplies (LACFC §507).

Table 8. LACFC Outdoor Installation Near Exposures BESS Requirements

Requirement	Compliance Required	LACFC Code Reference
All ESS installations	Yes	§1207.4
Size and separation	Yes	§1207.5.1
Maximum allowable quantities/maximum stored energy	Yes	§1207.5.2
Smoke and automatic fire detection	Yes	§1207.5.4
Fire suppression systems	Yes	§1207.5.5
Maximum enclosure size	Yes	§1207.5.6
Vegetation control	Yes	§1207.5.7
Means of egress separation	Yes	§1207.5.8
Clearance to exposures	Yes	§1207.8.3
Technology-Specific Protection – Lithium-ion Batteries		
Exhaust ventilation	Yes	§1207.6.1
Explosion control	Yes	§1207.6.3
Thermal runaway	Yes	§1207.6.5
Other LACFC Requirements – All Facilities		
Fire apparatus access roads	Yes	§503
Key boxes	Yes	§506
Fire protection water supply	Yes	§507

5.2 All ESS Installations

LACFC §1207.4 applies to all ESS installations: indoors, outdoors, stationary, or mobile. Only the fire and life safety general installation requirements applicable to an outdoor, NWI style BESS

installation are summarized in the following sections. Requirements unrelated to fire and life safety or pertaining to other types of BESS installations, such as indoor, are not discussed. These include fire-resistance rated separations (LACFC §1207.4.3), seismic and structural design (LACFC §1207.4.4), occupied work centers (LACFC §1207.4.10), open rack installations (LACFC §1207.4.11), and walk-in units (LACFC §1207.4.12).

5.2.1 Equipment Listing

LACFC §1207.3.1 requires ESS to be listed in accordance with UL 9540. The MP2XL is listed to UL 9540, as described in Section 2.12. As such, the Covina BESS complies with the LACFC equipment listing requirement.

5.2.2 Energy Storage Management System

LACFC §1207.3.4 requires an approved energy storage management system that monitors and balances cell voltages, currents and temperatures within the manufacturer's specifications. The system shall disconnect electrical connections to the ESS or otherwise place it in a safe condition if potentially hazardous temperatures or other conditions such as short circuits, over voltage or under voltage are detected. The system shall transmit a trouble signal to an approved location and to an approved annunciator panel if potentially hazardous temperatures or other conditions such as short circuits, over voltage, or under voltage are detected.

The MP2XL is provided with a TMS and BMS which transmits signals to Tesla's LOC as described in Sections 2.4, 2.5, and 2.6 as required by LACFC §1207.3.4. However, these signals are not transmitted to an annunciator panel at the Covina BESS site as the data received in the TMS and BMS cannot be transmitted to the fire alarm system for display at a remote annunciator. The remote annunciator will display fire alarm signals such as the gas detection signals within the MP2XL. As such, an Alternate Materials and Methods Review (AMMR) application has been submitted for the Covina BESS requesting a variance from the default requirements of LACFC §1207.3.4 and §1207.3.4.1.

5.2.3 Enclosures

LACFC §1207.3.5 requires ESS enclosures to be noncombustible. The MP2XL is a noncombustible container. As such, the Covina BESS complies with the LACFC enclosures requirement.

5.2.4 Electrical Disconnect

LACFC §1207.4.1 requires placards or directories to be installed at the location of the main electrical service disconnecting means indicating the location of stationary storage battery system disconnecting means in accordance with the California Electrical Code when the ESS disconnecting means is not within sight of the main electrical service disconnecting means. Based on a review of the drawing set, the main electrical service disconnecting means remains to be confirmed by the client. There will be an ESS E-stop button at a location to be determined. If this E-stop is not within sight of the main electrical service disconnecting means, placards or directories

indicating the location of the E-stop must be installed at the location of the main electrical service disconnecting means in order to be compliant with LACFC electrical disconnect requirements.

5.2.5 Working Clearances

LACFC §1207.4.2 requires access and working space to be provided and maintained for all electrical equipment to permit ready and safe operation and maintenance of such equipment in accordance with the California Electrical Code and the manufacturer's instructions. Based on a review of the drawing set and the MP2XL installation manual, working clearances in accordance with the manufacturer's instructions (8 feet in front of the MP2XLs) are provided at the Covina BESS. As such, the Covina BESS site design complies with the LACFC working clearance requirement.

5.2.6 Vehicle Impact Protection

LACFC §1207.4.5 requires ESS to be located or protected to prevent physical damage, including impact by a motor vehicle. Based on a review of the drawing set, vehicle impact protection is not being provided at the Covina BESS. However, this is not necessary as the Covina BESS is a secured installation that does not have personnel on site each day. Additionally, there are no public roads/ways on the site, so there will not be regular motor vehicle traffic moving through the site. Thus, vehicle impact protection is not necessary for the Covina BESS. As such, the Covina BESS site design complies with the LACFC vehicle impact protection requirement.

5.2.7 Combustible Storage

LACFC §1207.4.6 does not permit combustible materials to be stored in ESS rooms, cabinets, enclosures, areas, or walk-in units, nor does it permit combustible materials to be stored within 3 ft of ESS. The MP2XL is a NWI style BESS that is unoccupiable, with all internal components accessible via exterior doors. It does not have free open space within the cabinet to store additional combustible materials, and there are no combustible materials stored within 3 ft of the MP2XLs. Thus, the Covina BESS complies with the LACFC combustible storage requirement.

5.2.8 Toxic and Highly Toxic Gases

LACFC §1207.4.7 requires ESS that have the potential to release toxic and highly toxic gas during charging, discharging, and normal use conditions to be provided with a hazardous exhaust system in accordance with Chapter 5 of the California Mechanical Code. The MP2XL utilizes listed lithium-ion cells that do not vent toxic or highly toxic gases (or any gases) during charging, discharging, or normal use conditions. Therefore, no hazardous exhaust system is required for the MP2XL. As such, the Covina BESS site design complies with the LACFC toxic and highly toxic gas requirement.

5.2.9 Signage

LACFC §1207.4.8 requires approved signs to be provided on or adjacent to all entry doors for ESS rooms or areas and on enclosures of ESS cabinets and walk-in units located outdoors, on rooftops,

or in open parking garages. Signs designed to meet both the requirements of this section and California Electrical Code are permitted. The signage must include the following or equivalent:

1. "ENERGY STORAGE SYSTEM," "BATTERY STORAGE SYSTEM," "CAPACITOR ENERGY STORAGE SYSTEM," or the equivalent
2. The identification of the electrochemical ESS technology present
3. "ENERGIZED ELECTRICAL CIRCUITS"
4. Where water-reactive electrochemical ESS are present, the signage shall include "APPLY NO WATER"
5. Current contact information, including phone number, for personnel authorized to service the equipment and for fire mitigation personnel required by LACFC §1207.1.6.1.

A permanent plaque or directory denoting the location of all electric power source disconnecting means on or in the premises shall be installed at each service equipment location and at the location(s) of the system disconnect(s) for all energy sources capable of being interconnected.

While signage will be provided at the Covina BESS, at this time, the drawing set is not indicated to include the complete information per LACFC §1207.4.8. Thus, the Covina BESS is capable of being installed in accordance with the LACFC signage requirements upon demonstration of the intent to furnish signage on the exterior of the MP2XL identifying the equipment and associated risks as well as signage denoting the location of all electric power source disconnecting means.

5.2.10 Security of Installations

LACFC §1207.4.9 requires rooms, areas, and walk-in units in which electrochemical ESS are located to be secured against unauthorized entry and safeguarded in an approved manner. Security barriers, fences, landscaping, and other enclosures shall not inhibit the required airflow to, or exhaust from, the electrochemical ESS and its components. As described in Section 4.1.3, the Covina BESS will be surrounded by a concrete wall with a gate to prohibit access to the MP2XLs. This fencing shall not prohibit the required airflow to the MP2XLs. Thus, the Covina BESS complies with the LACFC security of installation requirement.

5.3 Outdoor ESS Installations Near Exposures

5.3.1 Size and Separation

LACFC §1207.5.1 requires BESS to be segregated into groups not exceeding 50 kWh and each group to be separated by a minimum of 3 ft from other groups. The Covina BESS will have larger capacities and smaller separation distances than what is specified in LACFC §1207.5.1. However, the LACFC permits the size and separation utilized at the Covina BESS based on the UL 9540A large-scale fire testing results (LACFC §1207.5.1 Exception 2). The MP2XL large-scale fire testing was performed in accordance with UL 9540A (see Section 3.3) demonstrated that a fire will not propagate from module-to-module within the MP2XL or to adjacent MP2XLs. To further

display the MP2XL's ability to avoid thermal runaway propagation, large-scale fire testing has been performed where the MP2XL was ignited (see Megapack 2 XL Fire Protection Engineering Report Appendix Destructive Fire Test and Fire Modeling). Fire modeling performed on the MP2XL, based on the data collected from that destructive large scale fire test, demonstrated that a fire in an MP2XL cabinet would not spread to adjacent cabinets in varying wind conditions. As such, this HMA, the UL 9540A testing, and the destructive large-scale fire testing supports the current design configuration (size and separation) for the site. Additionally, an AMMR application has been submitted for the Covina BESS requesting a variance from the default requirements of LACFC §1207.5.1.

5.3.2 Maximum Allowable Quantities

The Covina BESS will have a capacity of 440 MWh, which is greater than the 600 kWh threshold specified in LACFC Table 1207.5. However, this is permitted by the LACFC upon AHJ approval based on the development of an HMA and performance of UL 9540A large-scale fire testing (LACFC §1207.5.2 #1). The results of the UL 9540A unit level fire test (see Section 3.3) demonstrated that fire did not propagate from module-to-module within the MP2XL or to adjacent MP2XLs and this HMA has been developed for the Covina BESS. To further display the MP2XL's ability to avoid thermal runaway propagation, large-scale fire testing has been performed where the MP2XL was ignited (see Megapack 2 XL Fire Protection Engineering Report Appendix Destructive Fire Test and Fire Modeling). Fire modeling performed on the MP2XL, based on the data collected from that destructive large scale fire test, demonstrated that a fire in an MP2XL cabinet would not spread to adjacent cabinets in varying wind conditions. As such, this HMA, the UL 9540A testing, and destructive large-scale fire testing supports the current design configuration (maximum allowable quantities) for the site. Additionally, an AMMR application has been submitted for the Covina BESS requesting a variance from the default requirements of LACFC §1207.5.2.

5.3.3 Fire Detection Systems

LACFC §1207.5.4 requires an approved smoke or radiant energy-sensing fire detection system to be installed in rooms, indoor areas, and walk-in units containing BESS. Alarm and supervisory signals from detection systems shall be transmitted to a central station, proprietary or remote station service in accordance with NFPA 72, and to an approved annunciator panel. The MP2XL does not typically have an internal fire detection system that is integral to its design/construction. However, the MP2XL will be modified at the Covina BESS site to include four (4) internal gas detectors to satisfy the requirements of LACFC §1207.5.4. Two (2) gas detectors will be mounted and vertically stacked on the hinge side of the Bay 3 and Bay 9 doors for a total of four (4) detectors. The gas detectors will be monitored by a FACP that reports signals to an NFPA 72 compliant central station. Additionally, all signals from the FACP will be displayed at the remote annunciator at a location to be determined.

Gas detection is not a listed method of smoke or radiant energy-sensing fire in accordance with LACFC §1207.5.4. However, gas detection meets the intent of the code to provide early warning

and indicate potentially hazardous conditions within the BESS. As such, an AMMR application has been submitted for the Covina BESS requesting a variance from the default requirements of LACFC §1207.5.4.

LACFC §1207.5.4.1 requires visible annunciation be provided on cabinet exteriors or in other approved locations to indicate that potentially hazardous conditions associated with the ESS exist. The Covina BESS site will be provided with exterior, pole mounted horns and beacons located around the perimeter of the facility. The horns and beacons will actuate upon an alarm signal from the internal gas detectors to satisfy the requirements of LACFC §1207.5.4.1. Additionally, each MP2XL will be provided with an individual horn/strobe that activates from its associated gas detectors.

5.3.4 Fire Suppression Systems

LACFC §1207.5.5 requires an automatic fire suppression system to be installed in rooms and areas within buildings and walk-in units containing ESS. The MP2XL is a NWI style BESS that is unoccupiable with all internal components accessible via exterior doors. It is not being installed within a room or building. Therefore, the MP2XL installation at the Covina BESS does not require fire suppression systems. As such, the Covina BESS complies with the LACFC fire suppression system requirement. Additionally, an AMMR application has been submitted for the Covina BESS requesting a variance from the default requirements of LACFC §1207.5.5.

5.3.5 Maximum Enclosure Size

LACFC §1207.5.6 requires that walk-in units not exceed 53 ft × 8.5 ft × 9.5 ft. It does not require NWI containers to meet the maximum enclosure size requirements. The MP2XL is a NWI unit; thus, this requirement does not apply. Nonetheless, the Covina BESS meets the intent of this requirement as the MP2XL has dimensions of 28.9 ft × 5.4 ft × 9.2 ft, which are less than those specified by LACFC §1207.5.6.

5.3.6 Vegetation Control

LACFC §1207.5.7 requires areas within 10 ft on each side of outdoor ESS to be cleared of combustible vegetation and other growth. Combustible vegetation and other combustible growth will be cleared around the MP2XL cabinets such that none are within 10 feet. Additionally, a concrete wall will be provided around the site and act as a barrier against external vegetation. As such, the Covina BESS complies with the LACFC vegetation control requirement.

5.3.7 Means of Egress Separation

LACFC §1207.5.8 requires ESS located outdoors to be separated from any means of egress as required by the FCO, but in no case less than 10 ft. Based on a review of the drawing set, there are no buildings or occupiable structures within 10 ft of the MP2XLs. As such, the Covina BESS complies with the LACFC means of egress separation requirement.

5.3.8 Clearance to Exposures

LACFC §1207.8.3 requires ESS located outdoors to be separated by a minimum of 10 ft from the following exposures: lot lines, public ways, buildings, stored combustible materials, hazardous materials, high-piled stock, and other exposure hazards. Note, "other exposure hazards" applies to hazards not associated with the electrical grid infrastructure. Based on a review of the drawing set, exposures are at least 10 ft away from the nearest MP2XL (see Section 4.3). As such, the Covina BESS complies with the LACFC clearance to exposures requirement.

5.4 Technology-Specific Protection

LACFC §1207.6 requires electrochemical ESS to comply with the requirements as outlined in LACFC Table 1207.6. For lithium-ion batteries, this requires compliance with the exhaust ventilation requirements of LACFC §1207.6.1, explosion control requirements of LACFC §1207.6.3, and the thermal runaway requirements of LACFC §1207.6.5. Note, lithium-ion batteries do not need to meet the spill control and neutralization requirements of LACFC §1207.6.2 or the safety cap requirements of LACFC §1207.6.4.

5.4.1 Exhaust Ventilation

The amendment to LACFC §1207.6.1 requires exhaust ventilation complying with the California Mechanical Code.

The MP2XL is not provided with an exhaust ventilation system as lithium-ion ESS do not discharge flammable gases during charging, discharging, and normal operations. Therefore, the CFC and NFPA 855 do not require exhaust ventilation of lithium-ion ESS for this reason. Additionally, an AMMR application has been submitted for the Covina BESS requesting a variance from the default requirements of LACFC Table 1207.6 and §1207.6.1.

5.4.2 Explosion Control

LACFC §1207.6.3 requires explosion control complying with NFPA 68 or NFPA 69 to be provided for rooms, areas, ESS cabinets, or ESS walk-in units containing electrochemical ESS technologies.

The MP2XL includes an explosion control system to mitigate the risk of uncontrolled deflagration. The system includes pressure-sensitive vents (overpressure vents), and sparkers installed throughout the battery module bay designed to ignite flammable gases very early in a thermal runaway event before they accumulate within the enclosure and become an explosion hazard. Tesla developed the overpressure vents and sparker system because the application of NFPA 68 or NFPA 69 was not suitable for the MP2XL due to limited free air volume within the cabinet. This engineered approach is permitted by NFPA 855 §9.6.5.6.4 (2023) provided it is validated by installation-level fire and explosion testing and an engineering evaluation, which Tesla has performed, as described in Section 2.8.

As demonstrated through UL 9540A unit level and destructive unit level fire testing, the explosion control system is effective in mitigating the risk of deflagrations and overpressure events. During these tests, there were no observations of explosion hazards, including, but not limited to, observations of deflagration, projectiles, flying debris, detonation, or other explosive discharge of gases.

5.4.3 Thermal Runaway

LACFC §1207.6.5 requires thermal runaway protection for lithium-ion BESS. The protection can be provided with a listed device or other approved method to prevent, detect, and minimize the impact of thermal runaway. The thermal runaway protection is permitted to be part of the BMS that has been evaluated with the battery as part of the evaluation to UL 1973 or UL 9540. The MP2XL is equipped with a BMS that was tested and verified to UL 9540. As such, the Covina BESS complies with the LACFC thermal runaway requirements.

5.5 All Facilities

LACFC §501.1 requires facilities regulated by the LACFC to comply with Chapter 5, Fire Service Features. For outdoor near exposure BESS installation, that requires, or could require, compliance with the fire apparatus access road requirements of §503, the key box requirements of §506, and the fire protection water supply requirements of §507. Other sections of Chapter 5 would not be applicable to an outdoor BESS facility.

5.5.1 Fire Department Access

LACFC §503.1.1 requires fire apparatus roads to be provided for every facility, building, or portion of a building hereafter constructed or moved into or within the jurisdiction in accordance with LACFC §503. At a minimum, the fire apparatus access roads must meet the following:

1. Extend to within 150 feet of all portions of the facility and all portions of the exterior walls of the first story of the building as measured by an approved route around the exterior of the building or facility. (LACFC §503.1.1)
2. Have an unobstructed width of not less than 20 feet, exclusive of shoulders, except for approved security gates in accordance with Section 503.6, and an unobstructed vertical clearance to the sky. (LACFC §503.2.1)
3. Be designed and maintained to support the imposed loads of fire apparatus weighing at least 75,000 pounds and shall be surfaced so as to provide all-weather driving capabilities. (LACFC §503.2.3)
4. Have a turning radius and angles of approach and departure that are approved by the fire code official. (LACFC §503.2.4 and §503.2.8)
5. Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with an approved area for turning around fire apparatus. (LACFC §503.2.5)

6. The grade of the fire apparatus access road shall not exceed 15 percent. (LACFC §503.2.7).

Based on a review of the drawing set, the all-weather access roads at the Covina BESS have an unobstructed width of 26 ft, all MP2XLs are within 150 ft of the access road, and no dead-end access roads are present on site. However, the FCO must approve of turning radii, angles of approach/departure, grade, and imposed load for the access roads. Upon this approval, the Covina BESS is capable of compliance with the LACFC fire apparatus access road requirements.

5.5.2 Key Boxes

LACFC §506.1 permits the AHJ to require a key box to be installed in an approved location when an area is restricted. The key box must be of an approved type in accordance with UL 1037 and must contain keys to gain access, as required by the AHJ. Key boxes will be provided at both entrances of the Covina BESS site entrance to satisfy LACFC §506.

5.5.3 Water Supply

LACFC §507 requires an approved water supply capable of supplying the required water flow for fire protection to be provided to premises on which facilities, buildings, or portions of buildings are hereafter constructed or moved into or within the jurisdiction. On-site firefighting water will be provided via fire hydrants installed within the Covina BESS site. The hydrants will be located along the fire apparatus road such that all portions of the facility will be within 400 feet of a hydrant to satisfy LACFC §507. As such, the Covina BESS is capable of complying with the LACFC water supply requirement pending the AHJ approval of the fire hydrant design.

Note, typical BESS firefighting response procedures do not require or recommend offensive firefighting tactics to manually suppress a BESS fire. In addition, UL 9540A unit-level fire testing (see Section 3.3) demonstrated that a fire did not spread from module to module within the MP2XL or to adjacent MP2XLs. This result was without a fire suppression system installed inside the MP2XL and without manual fire suppression via hose lines. If manual firefighting tactics are used, water is considered the preferred agent for managing lithium-ion battery fires, suppressing nearby combustibles, cooling nearby exposures, and controlling smoke. Other fire suppression methods, such as gaseous agents (CO2, Halon), dry chemical suppressants, or foams, are unlikely to be effective.

5.6 Covina BESS Site Design Code Analysis Summary

Based on a review of the MP2XL and the drawing set, the Covina BESS site design can meet the LACFC installation level requirements for an outdoor near exposures, NWI style BESS when it is installed in accordance with the manufacturer's instructions, its listing, the approved drawings, and the LACFC. Several items were identified in this analysis that still need confirmation to ensure compliance. These include:

- The AMMR requesting the Covina BESS be exempt from transmitting signals from the energy storage management system to a remote annunciator as required by LACFC §1207.3.4 must be approved by the AHJ.
- Signage must be provided per LACFC §1207.4.8.
- The AMMR requesting the Covina BESS be permitted to exceed the size and separation requirements of LACFC §1207.5.1 must be approved by the AHJ.
- The AMMR requesting the Covina BESS be permitted to exceed the maximum allowable quantity requirements of LACFC §1207.5.2 must be approved by the AHJ.
- The AMMR requesting the Covina BESS be permitted to utilize gas detection in lieu of smoke or radiant energy-sensing fire detection within the MP2XL as required by LACFC §1207.5.4 must be approved by the AHJ.
- The AMMR requesting the Covina BESS be exempt from the fire suppression requirements of LACFC §1207.5.5 must be approved by the AHJ.
- The AMMR requesting the Covina BESS be exempt from the exhaust ventilation requirements of LACFC Table 1207.6 and §1207.6.1 must be approved by the AHJ.
- Fire apparatus access roads must be approved by the AHJ per LACFC §503.
- Fire hydrant locations must be approved by the AHJ per LACFC §507.

6.0 BESS PLANS AND TRAINING

The LACFC and California Senate Bill 38 (CA SB38) require several plans to be developed for a BESS site. Often, these documents are developed during construction or after substantial completion of the facility, such that they include site-specific details that would not be available prior (such as during the design phase of the project).

6.1 Commissioning, Operation, Decommissioning, and ITM

The LACFC requires commissioning, decommissioning, and inspection, testing, and maintenance (ITM) requirements for all BESS installations. Both state that the operation, inspection, testing, and maintenance must follow the manufacturer's instructions.

A commissioning plan must be developed for the integration of the new BESS equipment into the electrical utility grid. The commissioning documentation is to capture the commissioning roles and responsibilities, list of equipment, conditions, BESS operation compliance, fire protection feature compliance, and operability (LACFC §1207.2.1). An operation and maintenance manual must be developed and provided to both the Owner, or their authorized agent, and the BESS operator before the BESS is put into operation (LACFC §1207.2.2). A decommissioning plan must be developed to provide the organization, documentation requirements, contingencies, and methods and tools necessary to indicate how the safety systems, ESS, and components will be decommissioned and removed from the site (LACFC §1207.2.3). In addition, all fire protection systems must be designed, installed, commissioned, inspected, tested, and maintained as required by the LACFC and their respective NFPA standard (LACFC Chapter 9).

Commissioning, O&M, and decommissioning plans are to be developed for the Covina BESS facility. A commissioning guide, an O&M manual, and a decommissioning guide have been prepared by Tesla for the MP2XL. These documents can be used as a guide for the development of site-specific plans. FRA recommends that prior to energizing the Covina BESS, finalize all commissioning, O&M, and decommissioning plans for the Covina BESS, as required by the LACFC.

6.2 Emergency Response Plan

CA SB38 requires every BESS facility in California to have an emergency response and emergency action plan. The MP2XL Safety Manual covers general emergency response procedures related to the equipment and can be used as a guide for the site-specific ERP. An Emergency Response Plan (ERP) will be developed by FRA for the Covina BESS to address general site organization and management, fire/thermal runaway incidents, and subsequent appropriate efforts to meet CA SB38 requirements.

Note, Tesla developed a lithium-ion battery emergency response guide (ERG)[1] to provide guidance to anyone responding to an emergency involving an MP2XL (see Section 2.11). This guide can be utilized by site owners to develop their own site-specific emergency response plans. FRA recommends that prior to energizing the Covina BESS, the ERP should be finalized with the local fire department(s) that may respond to an emergency at the Covina BESS, as required by CA SB38.

6.3 Emergency Response Training

CA SB38 requires the owner of the BESS or their authorized representative to engage in emergency planning and training of emergency responders such that any foreseeable hazards associated with the on-site systems can be effectively addressed.

FRA recommends that all site personnel and emergency response personnel who could be responsible for responding to a Covina BESS emergency be trained on the ERP/EOP prior to energizing the Covina BESS. In addition, refresher training should be provided as appropriate, typically annually, as required by the AHJ.

[1] Industrial Lithium-Ion Battery Emergency Response Guide – Rev. 2.6, dated November 11, 2022 (ERG).

7.0 HAZARD MITIGATION ANALYSIS

This HMA is being prepared following the guidance by LACFC §1207.1.4. The HMA evaluates the fire safety features of the MP2XL, the findings of the UL 9540A cell, module, and unit level tests as summarized in the MP2XL FPE report, and the site level fire safety features of the Covina BESS.

Based on the product level and site level safety features, the fire and life safety consequences associated with typical BESS failure modes can be evaluated to determine the impact to site personnel, the general public, and adjacent exposures.

Per LACFC §1207.1.4.1, the consequences of the following failure modes must be evaluated in an HMA:

1. A thermal runaway condition in a single ESS rack, module, or unit.
2. Failure of any battery (energy) management system.
3. Failure of any required ventilation or exhaust system.
4. Voltage surges on the primary electric supply.
5. Short circuits on the load side of the ESS.
6. Failure of the smoke detection, fire detection, fire suppression or gas detection system.
7. Required spill neutralization not being provided or failure of a required secondary containment system.
8. Failure of temperature control.

The consequences of each of these failure modes for the MP2XL are discussed in detail below. Per LACFC §1207.1.4.2, the FCO or AHJ is authorized to approve the HMA provided that it demonstrates each of the following:

1. Fires will be contained within unoccupied ESS rooms or areas for the minimum duration of the fire-resistance-rated separations identified in Section 1207.7.4.
2. Fires in occupied work centers will be detected in time to allow occupants within the room or area to safely evacuate.
3. Toxic and highly toxic gases released during fires will not reach concentrations in excess of the IDLH level in the building or adjacent means of egress routes during the time deemed necessary to evacuate occupants from any affected area.
4. Flammable gases released from ESS during charging, discharging and normal operation will not exceed 10 percent of their lower flammability limit (LFL).
5. Flammable gases released from ESS during fire, overcharging and other abnormal conditions will be controlled through the use of ventilation of the gases, preventing accumulation, or by deflagration venting.

Only single failure modes must be evaluated. The consequences of each failure mode are evaluated in Sections 7.1 through 7.7 of this report.

7.1 Thermal Runaway Condition

7.1.1 Description

Thermal runaway is a condition in which a self-heating chemical reaction occurs within a battery cell. This occurs when the battery cell generates heat faster than the battery cell is able to dissipate heat. Thermal runaway can be caused by physical damage (e.g. puncture, crushing), electrical malfunctions (e.g. overcharging), exposure to elevated ambient temperatures (e.g. adjacent cells in thermal runaway with elevated temperatures), manufacturing defects, and other internal conditions which may develop inside of aging battery cells (e.g. dendrites).

Thermal runaway typically results in an overpressure event within the battery cell due to internal heat generation inside the casing causing battery gases to be ejected from the cell through the pressure relief valve. Depending on the conditions, thermal runaway may be limited to the initiating cell(s) or thermal runaway may propagate to adjacent cells. Thermal runaway propagation typically occurs through conductive and convective heating or physical damage of adjacent cells due to swelling of the initiating cell. Conductive heating is the primary mode of heat transfer to adjacent cells for a non-flaming event and convective heating is the primary mode of heat transfer to adjacent cells for a flaming event.

Based on the cell level and module level testing, the MP2XL cells generate toxic and flammable gases. Depending on the conditions of release, flammable gases released during a thermal runaway event may present an explosion or fire hazard. An explosion hazard exists when sufficient flammable gases are released in the absence of an ignition source and build-up within the container. A fire hazard exists when the flammable gases are released in the presence of an ignition source or self-ignite. It should be noted, the fire hazard and explosion hazard are not mutually exclusive, and both may exist at different time periods throughout a propagating thermal runaway event. In addition, toxic gases present a health exposure hazard to site personnel and first responders located in the vicinity of a BESS failure.

7.1.2 Barriers

Passive and active mitigation strategies are provided to prevent batteries from entering thermal runaway and cool adjacent batteries to prevent thermal runaway propagation. The following barriers are provided in the MP2XL:

- The cells and modules utilized in the MP2XL are certified to UL 1973, as described in Section 2.12. The standard evaluates the battery system's ability to safely withstand simulated abuse conditions. For example, the standard subjects module-level stationary batteries to an internal fire exposure test to force a thermal runaway in one cell to ensure it does not explode, propagate fire to neighboring cells, or propagate to the rest of the modular battery system.

- The MP2XL is equipped with a BMS which monitors cell health and shuts down power to modules/cabinets with cells operating outside of their operating conditions, as described in Section 2.5.
- The MP2XL is equipped with a TMS which automatically activates to provide cooling and prevent batteries from overheating and escalating to a thermal runaway event, as described in Section 2.4. Additionally, the TMS cools adjacent batteries in a thermal runaway scenario to prevent thermal runaway propagation.
- The MP2XL modules are equipped with passive barriers to minimize the likelihood of thermal runaway of spreading from module to module. In addition, the MP2XL itself is provided with passive barriers, such as the thermal bay and customer interface bay, to minimize the chance of a thermal runaway event from propagating throughout the entire container.
- The MP2XL is equipped with a series of electrical fault protection devices, as described in Section 2.7.
- The MP2XL will be regularly maintained to ensure it is operating within its specific parameters and to verify the batteries are in good working condition, as described in Section 4.1.2.

7.1.3 Consequences

The consequences of thermal runaway can vary widely depending on the gas release scenario and level of confinement; however, the primary consequences of thermal runaway can be grouped into the following hazard categories: fire and radiant heat, deflagrations and explosions, and toxic gases.

7.1.3.1 Fire & Radiant Heat Exposure Hazard

UL 9540A unit level testing did not result in a fire (i.e. flaming thermal runaway). During that test, seven cells went into thermal runaway: the six that were forcibly heated and one additional cell. However, thermal runaway did not propagate beyond the seventh cell and no sustained fire event occurred. To provide additional data to validate clearance/standoff distances for other MP2XLs, site equipment, or personnel, Tesla performed a destructive installation level fire test and fire modeling. Note, this destructive test is well beyond what is required for UL product listing and is also in excess of any plausible MP2XL failure scenario contemplated by Tesla. The fire was initiated by simultaneously heating 48 cells within the same battery module tray. This resulted in the ignition of battery vent gases and a controlled fire event (i.e., no deflagrations, shrapnel, flying debris, or other observations of explosions). The fire consumed one-half of the MP2XL (Bays 7-10) and did not spread past the CIB and Thermal Bay to Battery Bays 1-4. Flames were observed predominantly coming out the front doors of the cabinet (around the seams), out the front grill of the thermal roof (just above the doors), and out the exhaust vents on the top of the thermal roof.

Fire Propagation

Based on data collected from the destructive installation level fire test, Tesla performed a series of fire models to determine the heat flux imposed on target MP2XLs. The fire models included target MP2XL installed 8 ft in front, 6 inches behind, and 6 inches to the side of the initiating MP2XL and evaluated the potential for fire propagation to adjacent MP2XLs. The models were performed looking at typical wind conditions and worst-case wind conditions (where the flames are blown towards adjacent MP2XLs). The fire propagation model predicts maximum temperatures at the battery modules of adjacent MP2XLs and found target module temperatures are maintained below the threshold for cell thermal runaway (239°C or 462°F). Therefore, based on the fire propagation model, in the unlikely event of an MP2XL fire, and accounting for worst-case wind conditions, a flaming thermal runaway event would not propagate to an MP2XL installed 8 ft in front, 6 inches behind, or 6 inches to the side of the initiating MP2XL. Note, the Covina BESS was designed in accordance with the MP2XL DIM with these separation distances. Therefore, based on the fire propagation model, thermal runaway will not propagate to adjacent MP2XLs at the Covina BESS in the unlikely event of a fire. Based on a review of the drawing set, no propagation to other equipment on the site is expected.

If a fire were to occur at the substation main power transformer (MPT), fire propagation to an MP2XL is not expected as the closest MP2XL is 86 feet away from the MPT and 76 feet to the MPT's edge of containment. Where no fire barriers are provided, FMDS 5-4 requires a minimum 50-foot separation from the transformer to critical equipment. This assumes the most conservative scenario where the transformer is utilizing over 5,000 gallons of FM non-approved transformer fluid. As such, no propagation from the MPT to an MP2XL is expected.

Minimum Approach Distance

Table 9 provides a summary of the peak heat flux values that were predicted by the fire model at distances up to 100 ft directly in front of an MP2XL. Given flames exit the MP2XL out the front and top of the cabinet, the predicted heat flux values are the greatest directly in front of the MP2XL as opposed to behind or to the side of the cabinet. By assuming the heat flux imposed on surrounding exposures is based on heat fluxes observed directly in front of the cabinet, even if the exposure is not located in front of the MP2XL, provides a conservative, worst-case heat flux to exposures.

Table 9. Peak Predicted Heat Flux Values Directly in Front of the MP2XL

Distance	Peak Predicted Heat Flux
8 ft	9.38 kW/m^2
10 ft	7.45 kW/m^2
20 ft	2.87 kW/m^2
50 ft	0.57 kW/m^2
100 ft	0.17 kW/m^2

The values presented in Table 9 can be analyzed to determine the minimum approach distance (MAD) that the fire department or other first responders should maintain when responding to a fire event at the Covina BESS. A heat flux of 5 kW/m^2 is considered the limit at which severe skin pain can occur within 10 seconds when exposed to radiant heat. This heat flux threshold is typically identified as the extent at which first responders and fire department personnel should be wearing appropriate personal protective equipment (PPE) when responding to a fire event. By interpolating the data in Table 9, an MP2XL fire would produce a peak predicted heat flux of 5 kW/m^2 at a distance of 12.75 feet away from the MP2XL. Based on a review of the site plan, the 12.75 foot 5 kW/m^2 heat flux boundary is contained within the site's fencing. Therefore, anyone approaching the Covina BESS site would have to enter through the access gates to be exposed to such a heat flux.

7.1.3.2 Deflagration & Explosion Hazard

The MP2XL has been tested to UL 9540A as required by the LACFC. The module level test results shown in Table 10 indicate flammable gases, predominately hydrogen and hydrocarbons, are released from the battery modules. The MP2XL is equipped with an explosion control system that actively ignites flammable gases in conjunction with deflagration panels. Essentially the sparkers ignite flammable gases before the gases can accumulate in significant quantities within the MP2XL where a full volume explosion hazard could occur. The sparkers ignite partial volumes of flammable gas which then open the deflagration vents and prevent an uncontrolled deflagration and container failure.

The deflagration protection system has been validated through UL 9540A unit level testing. During this test, the failure of six cells nearly simultaneously did not result in an explosion. There were no observations of deflagration, projectiles, flying debris, detonation, or other explosive discharge of gases. In addition, it has been further validated in destructive installation level testing (as described above in 7.1.3.1) in which forty-eight cells simultaneously failed. During this test, the sparkers ignited the battery vent gases and activated the deflagration vents. No subsequent deflagration event occurred during the test and the exterior of the container remained intact.

Table 10. Products of Combustion: UL 9540A Module Level Testing

Gas Name	Chemical Structure	Measurement Peak (ppm)
Carbon Monoxide	CO	205
Carbon Dioxide	CO_2	6721
Methane	CH_4	68.8
Acetylene	C_2H_2	17.1
Benzene	C_6H_6	9
Hydrogen	H_2	446
Total Hydrocarbons	(propane equivalent)	247

CFD explosion modeling has been performed by FRA that evaluated the risk of overpressures and projectiles during a worst-case explosion involving a stoichiometric gas mixture. The model assumed that the sparker explosion control system was not active. The model concluded that in the event of a stoichiometric gas mixture explosion, an overpressure of 0.15 psi could exist up to 53.8 feet away. Additionally, the doors and overpressure vents were modeled as projectiles and had a potential throw distance of 25.3 feet and 57.8 feet, respectively. See referenced document *Megapack 2 XL Fire Protection Engineering Report Appendix Deflagration Modeling* for further details.

7.1.3.3 Toxic Gas Hazard

The MP2XL is not occupiable; therefore, toxic or highly toxic gas exposure is limited to individuals standing outside, in the open ambient air, in proximity to the MP2XL during a failure/fire event. The non-flammable gases collected during the module level testing are listed in Table 11 and provide guidance on the types of gases individuals and first responders may encounter when evacuating from or responding to an outdoor MP2XL fire. In addition to flammable gases discussed above, typical fire byproducts, such as CO and CO2 were the only non-flammable gases detected during the full combustion of an MP2XL tray of cells. The nonflammable gases detected are similar to gases first responders would encounter in a typical Class A structure fire and do not contain any unique, or atypical, gases beyond what you would find in the combustion of modern combustible materials, such as plastics. Note that toxic gases sometimes associated with lithium-ion batteries, such as HF, HCl, and HCN, were not detected during the combustion of the MP2XL tray during UL 9540A module level testing.

Table 11 also indicates the Immediately Dangerous to Life or Health (IDLH) values for each of the gases based on data published by National Institute for Occupational Safety & Health (NIOSH). The IDLH is an atmospheric concentration of any toxic, corrosive or asphyxiant substance that: poses an immediate threat to life; would cause irreversible or delayed adverse health effects; or would interfere with an individual's ability to escape from a dangerous atmosphere. The values measured from UL 9540A module level fire testing (where the products of combustion were collected within a hood) are well below the IDLH value for each gas.

Given the Covina BESS is installed outdoors, where any gas release would be diluted by the entrainment of outside air, these gases, at the quantities measured during UL 9540A module level fire testing, would not be expected to have an adverse effect on individuals during the time deemed necessary to evacuate from the area (i.e., approximately 30 seconds to walk 100 ft away/evacuate from a burning MP2XL). Nor would these gases, at the quantities measured during UL 9540A module level fire testing, be expected to have an adverse effect on emergency response personnel, who are wearing appropriate PPE, including a self-contained breathing apparatus (SCBA) while responding to an MP2XL fire.

Table 11. Products of Combustion: Nonflammable Gases and IDLH Values

Gas Name	Chemical Structure	Quantity Measured	IDLH Value

Carbon Monoxide	CO	205 ppm	1,200 ppm
Carbon Dioxide	CO_2	6,721 ppm	40,000 ppm

7.2 Failure of Any Battery (Energy) Management System

7.2.1 Description

The MP2XL is equipped with a BMS. The BMS tracks the performance, voltage, current, and state of charge (SOC) of the cells to ensure they are operating within manufacturer specifications. Per LACFC §1207.3.4 the BMS is required to disconnect electrical connections to the ESS if potentially hazardous conditions occur. Additionally, the BMS sends an alarm to the Tesla LOC and can initiate other controls based on the hazard detected as described in Section 2.5. Consequences due to BMS failure are evaluated in this section.

7.2.2 Barriers

The following barriers are provided to prevent BMS failure and minimize the consequences of BMS failure:

- The BMS is certified as part of the battery module to UL 1973, as described in Section 2.12.
- The BMS is monitored by the TSC and the LOC, as described in Section 2.6.
- Electrical fault protection is provided as described in Section 2.7.
- The BMS will be regularly maintained to ensure it is operating within its specific parameters, as described in Section 4.1.2.

7.2.3 Consequences

Failure of the BMS will prevent active monitoring of battery cell conditions. The BMS is monitored by the TSC/LOC such that a failure will be quickly detected and remediated reducing the duration an MP2XL is operating with deficient safety features. Additionally, the LOC has remote capabilities to discharge batteries from affected MP2XLs or shut down modules/entire cabinets, depending on the severity of the issue and the operational capabilities of the system at the time. Discharging the batteries reduces the consequences of a potential thermal event while the BMS is offline because the fire and explosion hazard is a direct correlation to battery SOC. It should be noted, BMS failure alone will not cause battery failure. In a worst-case scenario, a BMS failure in conjunction with a secondary failure condition (such as over voltage, excess temperature, etc.) may result in a thermal runaway event. Barriers and consequences of thermal runaway are provided in Section 7.1.2 and 7.1.3 of this report.

7.3 Failure of any Required Ventilation System

7.3.1 Description

A failure scenario involving any required ventilation or exhaust may expose the batteries to elevated operating temperatures. Depending on the resulting ambient temperature, ventilation failure may cause batteries to be exposed to temperatures outside of the manufacturer recommended operating conditions or temperatures at which the cell fails. The MP2XL is not provided with any required ventilation or exhaust system. However, the MP2XL is provided with a closed loop liquid cooling TMS for the battery modules, as described in Section 2.4. The cooling system performs a similar function to ventilation such that it is provided to cool battery cells and maintain battery operating temperatures within Tesla's recommended range. This failure scenario evaluates the consequences associated with a failure of the liquid cooling system.

7.3.2 Barriers

The MP2XL is equipped with the following barriers to prevent ventilation system failure and reduce the consequences of a failure event:

- The TMS is monitored by the TSC and the LOC, as described in Section 2.6.
- The TMS will be regularly maintained to ensure it is operating within its specific parameters, as described in Section 4.1.2.

7.3.3 Consequences

Failure of the cooling system may expose batteries to ambient temperatures. The average peak ambient temperature in Covina, California is 91º F and occurs in August. The peak temperature is less than the cell venting temperature; therefore, failure of the cooling system is not anticipated to lead to a thermal runaway event. The TMS is monitored by the TSC/LOC such that a failure will be quickly detected and remediated, reducing the duration an MP2XL is operating with deficient safety features. Additionally, the LOC has remote capabilities to discharge batteries from affected MP2XLs or shut down modules/entire cabinets, depending on the severity of the issue and the operational capabilities of the system at the time. Discharging the batteries reduces the consequences of a potential thermal event while the TMS is offline because the fire and explosion hazard is a direct correlation to battery SOC. In a worst-case scenario, batteries operating at elevated temperatures for extended periods of time may degrade and have a higher likelihood of failure over time, possibly leading to thermal runaway. Barriers and consequences of thermal runaway are provided in Section 7.1.2 and 7.1.3 of this report.

7.4 Voltage Surges on the Primary Electric Supply

7.4.1 Description

A voltage surge on the primary electric supply to the BESS may expose batteries to excessive voltage. This failure scenario evaluates the consequences due to a voltage surge on the primary electric supply.

7.4.2 Barriers

The following barriers are provided to minimize the consequences of a voltage surge on the primary electric supply:

- Electrical fault protection is provided as described in Section 2.7.
- Battery health is monitored by the BMS and automatically shuts down power upon over voltage conditions.
- The electrical components of the MP2XL are monitored by the TSC and the LOC, as described in Section 2.6.

7.4.3 Consequences

In the event of a voltage surge, the electrical fault protection will automatically stop electricity flow in the affected electrical circuit. The BMS provides redundancy and will also cut power to the affected cells and send a signal to the TSC/ LOC such that a failure will be quickly detected and remediated, reducing the duration an MP2XL is operating with a damaged electrical component/equipment. Additionally, the LOC has remote capabilities to discharge batteries from affected MP2XLs or shut down modules/entire cabinets, depending on the severity of the issue and the operational capabilities of the system at the time. Discharging the batteries reduces the consequences of a potential thermal event while the MP2XL is offline because the fire and explosion hazard is a direct correlation to battery SOC. In a worst-case scenario, voltage surges may lead to a thermal runaway event, the barriers and consequences of thermal runaway are provided in Section 7.1.2 and 7.1.3 of this report. It should be noted, if permissible, the Tesla LOC may discharge the batteries in adjacent MP2XLs to reduce the thermal hazard and associated consequences.

7.5 Short circuits on the Load Side of the BESS

7.5.1 Description

A short circuit on the load side of the BESS may result in an increased current traveling through the battery circuit. Electrical currents outside of the recommended operating range may damage batteries and lead to a thermal runaway event.

7.5.2 Barriers

The following barriers are provided to minimize the consequences of a short circuit event:

- Electrical fault protection is provided as described in Section 2.7.
- Battery health is monitored by the BMS and automatically shuts down power upon over voltage conditions.
- The electrical components of the MP2XL are monitored by the TSC and the LOC, as described in Section 2.6.

7.5.3 Consequences

In a short circuit condition, the electrical fault protection will automatically stop current in the affected electrical circuit. The BMS provides redundancy and will also cut power to the affected cells and send a signal to the TSC/ LOC such that a failure will be quickly detected and remediated, reducing the duration an MP2XL is operating with a damaged electrical component/equipment. Additionally, the LOC has remote capabilities to discharge batteries from affected MP2XLs or shut down modules/entire cabinets, depending on the severity of the issue and the operational capabilities of the system at the time. Discharging the batteries reduces the consequences of a potential thermal event while the MP2XL is offline because the fire and explosion hazard is a direct correlation to battery SOC. In a worst-case scenario, short circuits may lead to a thermal runaway event, the barriers and consequences of thermal runaway are provided in Section 7.1.2 and 7.1.3 of this report. It should be noted, if permissible, the Tesla LOC may discharge the batteries in adjacent MP2XLs to reduce the thermal hazard and associated consequences.

7.6 Failure of a Fire Protection System

7.6.1 Description

A failure of a fire protection system can include a smoke detection, fire detection, fire suppression, gas detection system or explosion control system. The MP2XL does not have an internal fire detection, gas detection, or suppression system that is integral to its design/construction. It is equipped with an explosion control system (sparker and overpressure vents). Therefore, this failure scenario evaluates the consequences associated with failure of the explosion control system (sparker or overpressure vent).

7.6.2 Barriers

The sparker system is provided with the following features to prevent sparker failure and minimize consequences associated with sparker failure:

- Redundancy in wiring. Failure of one sparker will not cause failure in subsequent sparkers.
- Twelve total sparkers installed throughout the container.
- Automotive grade sparkers designed to operate in extreme temperature and pressure conditions.
- Redundant power supply.
- Monitored by Tesla LOC, if power is lost O&M personnel will be notified to remediate the issue.
- Sparker interval automatically increases if connection is lost to any of the required inputs (i.e. BMS failure).
- Deflagration vents.

- Regular ITM performed on sparker system.
- Tesla LOC has remote capabilities to discharge batteries of affected cabinets into adjacent MP2XLs on site.
- A 10-foot explosion/blast shielding wall is provided around the perimeter of the Covina to mitigate any potential overpressures and projectiles leaving the site.

7.6.3 Consequences

Independent failure of a sparker or the sparker system will have no effect on the battery container and will not induce a thermal runaway event. Sparker power is monitored by Tesla LOC; therefore, sparker failure would be quickly noticed and remediated reducing the duration of the deficiency. Additionally, the Tesla LOC may discharge the batteries in the affected container into an adjacent container to reduce the thermal hazard and associated consequences.

In the unlikely event of sparker failure in conjunction with a thermal runaway event, flammable gases may accumulate locally prior to reaching the next sparker ignition source. The sparker design includes twelve sparkers such that failure of one will not permit an accumulation of gases outside of the deflagration vent design basis. Additionally, the deflagration vents are designed with a safety factor of two which provides an additional level of safety in the event of increased gas accumulation.

CFD explosion modeling has been performed by FRA that evaluated the risk of overpressures and projectiles during a worst-case explosion involving a stoichiometric gas mixture. The model concluded that in the event of a stoichiometric gas mixture explosion, an overpressure of 0.15 psi could exist up to 53.8 feet away. Additionally, the doors and overpressure vents were modeled as projectiles and had a potential throw distance of 25.3 feet and 57.8 feet, respectively. As such, a 10-foot explosion/blast shielding wall is provided around the perimeter of the Covina BESS to mitigate any potential overpressures and projectiles leaving the site.

7.7 Failure to Provide Spill Neutralization or Secondary Containment

7.7.1 Description

Lithium-ion batteries, because of their chemistry and architecture, do not require spill neutralization or secondary containment. Unlike other battery types, such as lead acid, there is no free-flowing liquid inside the cells that requires neutralization or containment. This distinction is also made in LACFC Table 1207.6 where lithium-ion BESS is not required to provide spill neutralization and secondary containment.

7.7.2 Barriers

Although the lithium-ion batteries do not require containment, the MP2XL is equipped with a TMS that utilizes 106 gallons of a glycol-water solution. The MP2XL, specifically, the IP66 battery bay enclosure, is designed to hold the volume of the solution should a leak occur in the TMS, either in normal operation or during a failure event.

7.7.3 Consequences

No consequences – failure mode is not applicable to MP2XL.

7.8 Failure of Temperature Control

7.8.1 Description

The MP2XL is equipped with a TMS. The TMS provides a suitable operating temperature for the MP2XL. A failure of the TMS may expose the batteries to elevated operating temperatures. Depending on the resulting ambient temperature, temperature control failure may cause batteries to be exposed to temperatures outside of the manufacturer recommended operating conditions or temperatures at which the cell fails.

7.8.2 Barriers

The MP2XL is equipped with the following barriers to prevent TMS failure and reduce the consequences of a failure event:

- The TMS is monitored by the TSC and the LOC, as described in Section 2.6.
- The TMS will be regularly maintained to ensure it is operating within its specific parameters, as described in Section 4.1.2.

7.8.3 Consequences

Failure of the TMS may expose batteries to ambient temperatures. The average peak ambient temperature in Covina, California is 91ºF and occurs in August. The peak temperature is less than the cell venting temperature; therefore, failure of the cooling system is not anticipated to lead to a thermal runaway event. The TMS is monitored by the TSC/LOC such that a failure will be quickly detected and remediated, reducing the duration an MP2XL is operating with deficient safety features. Additionally, the LOC has remote capabilities to discharge batteries from affected MP2XLs or shut down modules/entire cabinets, depending on the severity of the issue and the operational capabilities of the system at the time. Discharging the batteries reduces the consequences of a potential thermal event while the TMS is offline because the fire and explosion hazard is a direct correlation to battery SOC. In a worst-case scenario, batteries operating at elevated temperatures for extended periods of time may degrade and have a higher likelihood of failure over time, possibly leading to thermal runaway. Barriers and consequences of thermal runaway are provided in Section 7.1.2 and 7.1.3 of this report.

7.9 HMA Analysis Approval

Based on the analysis above, the Covina BESS meets all of the HMA approval criteria for FCO or AHJ approval per LACFC §1207.1.4.2 as it has demonstrated that:

1. *Fires will be contained within unoccupied ESS rooms or areas for the minimum duration of the fire-resistance rated separations identified in Section 1207.7.4 (LACFC §1207.1.4.2 #1):*

The Covina BESS meets this requirement. The MP2XL is installed outdoors, not within an unoccupied BESS room or area. However, it should be noted, the MP2XL design includes a series of passive fire protection schemes (barriers) to protect it from spreading a fire from one MP2XL to another. As demonstrated in UL 9540A unit-level fire testing, a nearly simultaneous failure of six cells did not result in thermal runaway propagating throughout the battery module or to adjacent MP2XLs. In addition, large-scale fire testing and fire modeling demonstrated a fire will not propagate from one MP2XL to adjacent MP2XLs under the tested conditions. Although this requirement applies to BESS rooms or areas (and not an outdoor installation), the Covina BESS still meets the intent of the requirement by containing a fire event to a single MP2XL.

2. *Fires in occupied work centers will be detected in time to allow occupants within the room or area to safely evacuate (LACFC §1207.1.4.2 #2):*

   The Covina BESS meets this requirement. The MP2XL is installed outdoors, not within an occupied work center (or any other room). However, the MP2XL has a number of internal sensors within it that can detect an abnormal overheating event, such as a fire. These sensors are monitored by the BMS and are relayed to the TSC and LOC. The LOC can then inform O&M service personnel who, if necessary, can notify the fire department if there is a thermal event. Although this requirement applies to occupied work centers (and not an outdoor installation), the Covina BESS still meets the intent of the requirement through the external thermal imaging system and the internal sensors provided within the MP2XL.

3. *Toxic and highly toxic gases released during fires will not reach concentrations in excess of the IDLH level in the building or adjacent means of egress routes during the time deemed necessary to evacuate occupants from any affected area (LACFC §1207.1.4.2 #3):*

   The Covina BESS meets this requirement. The MP2XL is installed outdoors, not within a building or adjacent to any means of egress. The nearest building/are the businesses adjacent to the east BESS yard, which is approximately 20 ft from an MP2XL. This distance is greater than the 10 foot clearance distance required by the LACFC from the BESS to adjacent buildings and/or means of egress. However, it should be noted, toxic gas concentrations measured during UL 9540A module-level fire testing (where the products of combustion were collected within a hood) are well below the IDLH value for each gas. Given the Covina BESS is installed outdoors, where any gas release would be diluted by the entrainment of outside air, these gases, at the quantities measured during UL 9540A module level fire testing, would not be expected to have an adverse effect on individuals during the time deemed necessary to evacuate from the area (i.e., approximately 30 seconds to walk 100 ft away/evacuate from a burning MP2XL). Nor would these gases, at the quantities measured during UL 9540A module level fire testing, be expected to have an adverse effect on emergency response personnel, who are wearing appropriate personal protective equipment (PPE) while responding to an MP2XL fire. Although this requirement applies to a building or to an installation that is immediately adjacent to a

means of egress route, the Covina BESS still meets the intent of the requirement (i.e., do not produce toxic or highly toxic gases above the IDLH during an MP2XL fire event during the time deemed necessary to evacuate from the area).

4. *Flammable gases released from ESS during charging, discharging, and normal operation will not exceed 10 percent of their LFL (LACFC §1207.1.4.2 #4):*

   The Covina BESS meets this requirement. The MP2XL utilizes listed lithium-ion cells that are hermetically sealed and do not vent during charging, discharging or normal operation. Unlike other battery types, no flammable gases are released during normal operation of the lithium-ion batteries. As such, no flammable gases exceeding 10 percent of their LFL will be released from the Covina BESS during charging, discharging, and normal operation.

5. *Flammable gases released from ESS during fire, overcharging, and other abnormal conditions will be controlled through the use of ventilation of the gases, preventing accumulation, or by deflagration venting (LACFC §1207.1.4.2 #5):*
   The Covina BESS meets this requirement. The MP2XL has an integral explosion control system installed inside the cabinet that includes a sparker system and overpressure vents. The system is designed to ignite flammable gases very early in a thermal runaway event before they accumulate within the enclosure and to ventilate the cabinet via the overpressure vents should a partial volume deflagration occur. The effectiveness of the explosion control system of the MP2XL was demonstrated through UL 9540A unit-level fire testing. During that test, the failure of six cells nearly simultaneously within the same battery module did not create an explosion hazard. There were no observations of a deflagration, projectiles, flying debris, detonation, or other explosive discharge of gases.

8.0 RECOMMENDATIONS

Throughout the report, FRA provided several recommendations related to the Covina BESS installation and emergency response to mitigate the hazards of a fire event. These recommendations are based on our review of the available materials, our background, experience and training, the analyses performed to date described above, Tesla's ERG, common industry best practices for responding to a thermal event involving lithium-ion BESS, as well as from FRA's experience with lithium-ion battery hazards, lithium-ion battery BESS hazards, and previous Tesla BESS fires. These recommendations do not provide opinions or conclusions meant to address specific circumstances or all possible scenarios of an emergency. As with all emergency events, emergency response actions should be evaluated and performed based on real time fire conditions and observations (i.e., wind direction/speed, fire intensity, proximity of flames to adjacent electrical equipment and structures) during the actual emergency. Below is a summarized list of the recommendations provided throughout the report:

1. **Site Design:** As the design of the site is finalized, FRA recommends the following:
    a. Signage must be provided per LACFC §1207.4.8.
    b. Fire apparatus access roads must be approved by the AHJ per LACFC §503.
    c. Fire hydrant locations must be approved by the AHJ per LACFC §507.
2. **BESS Plans:** FRA recommends that prior to energizing the Covina BESS, develop commissioning, operations and maintenance, decommissioning and emergency response/operation plans, as required by the LACFC.
3. **Emergency Response Training:** FRA recommends that all site personnel and emergency response personnel, who could be responsible for responding to a Covina BESS emergency, be trained on the ERP prior to energizing the Covina BESS. Refresher training should be provided as appropriate, typically annually, as required by the AHJ.
4. **Fire Protection Systems:** FRA recommends that all fire protection systems be designed, installed, commissioned, and periodically inspected, tested, and maintained as required by the LACFC and their respective NFPA standards.

9.0 CONCLUSIONS

Based on our review of the available materials, our background, experience and training, and the analysis performed to date described above, the following conclusions are submitted for the Covina BESS:

1. The MP2XL and the Covina BESS site design can meet the LACFC requirements for an outdoor near exposures BESS installation when it is installed in accordance with the MP2XL DIM, its listing, the approved drawings, and the LACFC. As the design of the site is being finalized, to ensure compliance, the following must be provided:
    a. The AMMR requesting the Covina BESS be exempt from transmitting signals from the energy storage management system to a remote annunciator as required by LACFC §1207.3.4 must be approved by the AHJ.
    b. Signage must be provided per LACFC §1207.4.8.
    c. The AMMR requesting the Covina BESS be permitted to exceed the size and separation requirements of LACFC §1207.5.1 must be approved by the AHJ.
    d. The AMMR requesting the Covina BESS be permitted to exceed the maximum allowable quantity requirements of LACFC §1207.5.2 must be approved by the AHJ.
    e. The AMMR requesting the Covina BESS be permitted to utilize gas detection in lieu of smoke or radiant energy-sensing fire detection within the MP2XL as required by LACFC §1207.5.4 must be approved by the AHJ.
    f. The AMMR requesting the Covina BESS be exempt from the fire suppression requirements of LACFC §1207.5.5 must be approved by the AHJ.
    g. The AMMR requesting the Covina BESS be exempt from the exhaust ventilation requirements of LACFC Table 1207.6 and §1207.6.1 must be approved by the AHJ.
    h. Fire apparatus access roads must be approved by the AHJ per LACFC §503.
    i. Fire hydrant locations must be approved by the AHJ per LACFC §507.
2. The HMA demonstrates the Covina BESS meets all the HMA performance criteria for approval outlined in LACFC §1207.1.4.2, as follows:
    a. Fires will be contained within unoccupied ESS rooms or areas for the minimum duration of the fire-resistance rated separations identified in Section 1207.7.4. (LACFC §1207.1.4.2 #1)
    b. Fires in occupied work centers will be detected in time to allow occupants within the room or area to safely evacuate. (LACFC §1207.1.4.2 #2)

c. Toxic and highly toxic gases released during fires will not reach concentrations in excess of the IDLH level in the building or adjacent means of egress routes during the time deemed necessary to evacuate occupants from any affected area. (LACFC §1207.1.4.2 #3)

d. Flammable gases released from ESS during charging, discharging, and normal operation will not exceed 10 percent of their LFL. (LACFC §1207.1.4.2 #4)

e. Flammable gases released from ESS during fire, overcharging, and other abnormal conditions will be controlled through the use of ventilation of the gases, preventing accumulation, or by deflagration venting. (LACFC §1207.1.4.2 #5)

In summary, based on the UL 9540A testing and a review of the drawing set, the Covina BESS can meet the Hazard Mitigation Analysis approval criteria presented in the LACFC upon the inclusion of any listed missing requirements, as described above.

Appendix A-3
Health Risk Assessment

MEMORANDUM

To:	Kimberly Comacho, Covina Reliability Project, LLC
From:	Adam Poll, Dudek
Subject:	Refined Health Risk Assessment for the Covina Reliability Project
Date:	December 17, 2025
Attachments:	A – Emission Calculations
	B – AERMOD and HARP2 Modeling Files

1 Introduction

1.1 Purpose

Dudek prepared a health risk assessment (HRA) modeling analysis to estimate health risk impacts on proximate sensitive receptors from exposure to toxic air contaminant (TAC) emissions from construction and operation of the proposed Covina Reliability Project (Project) located within the City of Covina (City). The Project proposes the development of an approximately 110-megawatt (MW)/440 MW-hour battery energy storage system (BESS) facility.

The analysis in this HRA uses air dispersion modeling methodology to evaluate potential public health risks associated with the Project include Southern California Edison (SCE) improvements. Results of the modeling analysis are compared with the most recent significance thresholds established by the South Coast Air Quality Management District (SCAQMD) in accordance with the SCAQMD's *Modeling Guidance for AERMOD* (SCAQMD n.d.), *Final Localized Significance Threshold Methodology* (SCAQMD 2008), and *Risk Assessment Procedures for Rule 1401, 1401.1, and 212* (SCAQMD 2024).

1.2 Facility Information

Stationary Source Name: Covina Reliability Project

Stationary Source Identification Number (SSID): NA

All facility names and facility identification numbers (FIDs) associated with the stationary source: NA

Location (street address and UTM coordinates, including datum): 530 & 680 E. Edna Place, Covina (Project site); (418786.74 m E, 3772764.66 m N) and (419049.17 m E, 3772761.72 m N); WGS84.

Plot plan of stationary source: See Figure 1 for the plot plan and the aerial map Figure 2 for the Project site.

Project Description: The Project is designed to charge or discharge electricity to and from the grid via BESS with associated on-site support components consisting of battery enclosures, inverters, collector lines, fencing, access roads, supervisory control, a Supervisory Control and Data Acquisition (SCADA) system, and other ancillary facilities

or equipment. The Project would also include an on-site Project substation on the west site that will allow interconnection to the adjacent SCE Cortez Substation via an overhead gen-tie line.

Utilizing similar battery technology used in electric vehicles, the Project would provide additional capacity to the electrical grid to assist with serving load during periods of peak demand by charging when demand is low and discharging when demand is high. This accommodates the integration of additional intermittent renewables such as wind and solar and reduces the need to operate natural gas power plants. The Project would also serve as an additional local capacity resource that would enhance grid reliability.

The Project is expected to create approximately 40 jobs during construction, many of which can be sourced from the City and adjacent cities. The Project would be operated remotely, with weekly visits by one to two workers in a light utility truck for routine inspections. Periodic on-site maintenance, including occasional equipment replacement and electrical repairs, would be performed as needed by regional employees and contractors.

Battery Energy Storage System

The Project would include placement of battery energy storage enclosures and associated electrical equipment, including medium voltage transformers and power conversation systems. Each unit consists of a storage enclosure/non-occupiable steel cabinet that houses battery modules and power conversion system equipment. The battery storage units are prefabricated off site and would arrive to the site fully assembled and ready to be installed and operated. The actual number of energy storage enclosures and types are approximate and subject to change based on available battery technology at the time of construction. Each battery energy storage enclosure would have insulation, a module cooling system, a battery management system, fire detection equipment, power conversion system (PCS) equipment containing the electronic controls, inverters, and a medium voltage step-up transformer. The primary storage components would consist of self-contained electrochemical battery systems using conventional storage technologies with proven safety and performance records. The BESS enclosures would be designed such that the periodic maintenance and replacement of underperforming battery components can be easily performed on an as-needed basis without replacing the entire module.

Fire detection measures are incorporated in the Project design in accordance with National Fire Protection Association (NFPA) safety standards. It should be noted that selection of batteries would be based on supply chain considerations;[1] as such, the capacity and size of the containers may change, as may the ratings of the conversion equipment (inverters and transformers). The number of containers, inverters, and transformers and expected total megawatt capacity are an estimate based on currently available technology and are similar to components typically found in BESS facilities. While the battery technology may change, the overall development footprint of the Project would remain consistent. As further described herein, anticipated minor alterations to the configuration of the BESS containers and related facilities within the Project footprint would not substantially change the Project design in a manner that would result in new significant environmental impacts or substantially increase the severity of impacts identified in this IS/MND.[2] Individual lithium-ion, or similar technology, battery cells form the core of the BESS. Cells are assembled either in series or parallel connection in sealed battery modules. The battery modules would be installed in self-supporting racks electrically connected either in a series or parallel to each other. The individual

1 The battery energy storage enclosures are manufactured by Tesla, Fluence, LG Chem, and a number of other manufacturers. The specific manufacturer will be selected at a future date based on supply chain considerations and available battery technology at the time of construction.

2 *Residents Against Specific Plan 380 v. County of Riverside* (2017) 9 Cal.App.5th 941.

battery racks are connected in series or parallel configuration to deliver the BESS power rating. The battery racks would be fused.

The BESS facility would be unstaffed and would include remote operational control. The BESS facility would be uninhabited with no bathroom facilities, running water, or office space. Project operations would be monitored remotely through the SCADA system that would be housed in an enclosure adjacent to the Project substation. Periodic inspections and maintenance activities would occur on the Project site.

Project Substation

The Project substation would be the termination point of the 34.5-kilovolt (kV) medium voltage collection system. The power to and from the BESS would be passed through a final interconnection step-up transformer to convert it from 34.5kV to 66kV, which is the Project's interconnection voltage at the SCE Cortez Substation. The open-air Project substation would be on the southern portion of the west site adjacent to the SCE Cortez Substation as shown in the Preliminary Site Plan Improvements.

Operations and Maintenance

Once constructed, the Project would operate 7 days per week, 365 days per year. The facility would be remotely monitored by the original equipment manufacturer and the Applicant. Project operations would be monitored remotely through the SCADA system. The Project would include one single story control enclosure for the SCADA system (approximately 400 to 700 square feet and a height of about 15 feet) near the Project substation.

During operation of the Project substation, operation and maintenance staff would visit the substation periodically for maintenance activities. Routine operations would require one or two workers in a light utility truck to visit the facility on a weekly basis.

Periodic augmentation of batteries within the Project site would occur to maintain the capacity over an approximate 30-year life. Occasionally, on-site maintenance would be required, which may include replacement of equipment and miscellaneous electrical repairs on an as-needed basis. No permanent sanitary facilities would be required. Maintenance trucks would be utilized to perform routine maintenance, including but not limited to equipment testing, monitoring, repair, routine procedures to ensure service continuity, and standard preventative maintenance. Typically, one major maintenance inspection would take place annually.

Generation Transmission and Collection Lines

Gen-Tie Line – West Site

The energy would be transported to and from the Project substation to the adjacent SCE Cortez Substation through a gen-tie line. The 66kV gen-tie line would be installed above ground from an approximately 50-foot point of change over (POCO) pole located within the Project substation, travel overhead approximately 90 feet into the SCE Cortez Substation, where it would connect to a 39-foot tall 66kV dead end switchyard structure, as described further below under SCE Cortez Substation Improvements. The 50-foot gen-tie POCO pole would be constructed of steel and would be at a height that is consistent with the existing equipment within the SCE Cortez Substation and the existing transmission lines along East Edna Place.

Collection Line

The Project would include a 34.5kV below-ground collection (feeder) line that would connect the east site to the west site and substation. The collection line would extend from northeast corner of the east site, west along the south side of East Edna Place within a portion of the public right-of-way approximately 600 feet before turning south and interconnecting with the Project substation.

Perimeter Fencing, Landscaping, Signage, and Lighting

The Project site would be enclosed by an 8-foot-tall perimeter concrete block wall and include wrought iron gates to enter the site. The primary purpose of the wall and rolling driveway gates, which would be equipped with a keypad, is to prevent unauthorized access to the site and to provide a buffer between the Project and surrounding uses. The portions of the Project site that front East Edna Place would be landscaped.

Low elevation (less than 14 feet) controlled security lighting would be installed throughout the site as necessary. Lighting installed as part of the Project would be required to incorporate light-emitting diode (LED) lighting for parking areas, entryways, and pedestrian areas, including wall-mounted motion-sensor LED lights on both the interior and exterior of the proposed concrete wall. Operational lighting would only be switched on when personnel enter the area through a manual activation (switch). All fixtures would be downward-directed and shielded to prevent light trespass and comply with applicable light-pollution standards.

Drainage Improvements

The Project proposes to match drainage patterns to those of existing conditions. The Project would redevelop the existing impervious surface lots to include pervious landscape and gravel areas, resulting in an overall increase in pervious area compared to existing conditions. Although detention is not required due to the Project's proposed increases to perviousness and improved infiltration capacity, the Project would include two bioretention basins designed to meet Low Impact Development (LID) standards and treat on-site runoff consistent with the City's MS4 permit requirements. Once operational, runoff would continue to surface flow generally south and southwest, discharging into the two respective bioretention basins for treatment and infiltration. Flows that exceed the basin capacity during large storm events would weir overflow south onto the Metrolink railroad tracks. Subsurface storm drain infrastructure is not proposed.

SCE Cortez Substation Improvements

In order to facilitate operation of the Project, SCE would make improvements to the SCE Cortez Substation to accommodate new equipment. These improvements would be made within the existing SCE substation footprint, would be within areas previously disturbed, and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. Below is a summary of improvements to the SCE Cortez Substation:

- Install facilities for a new 66kV switchrack position to terminate the Project's gen-tie line within the SCE Cortez Substation. This work includes the following:
  - One (1) 39-foot tall 66kV dead end switchyard structure
  - Two (2) 66kV voltage transformers with steel pedestal support structures
  - Three (3) 66kV line drops

  - One (1) 66kV circuit breaker
  - Three (3) 66kV group operated disconnect switches, one with grounding equipment
  - Extend bus 1 position to the west within the SCE Cortez Substation fence line
  - 200 feet of conductor from the 39-foot tall 66kV dead end structure within the SCE Cortez Substation to the Project's point of change in ownership location outside SCE Cortez Substation fence line.
- Install telecommunications facilities:
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend fiber optic cable to the communications room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend the Project's diverse telecommunications into the communication room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
- Lightwave, channel, and associated equipment (including terminal equipment), supporting protection, remote terminal unit and SCADA requirements at the Project and SCE Cortez Substation.

Covina Reliability Project

2 Source and Emission Inventory Information

For risk assessment purposes, particulate matter less than 10 microns in diameter (PM_{10}) in diesel exhaust is considered diesel particulate matter (DPM), originating mainly from off-road equipment operating at a defined location for a given length of time at a given distance from sensitive receptors. Less-intensive, more-dispersed emissions result from on road vehicle exhaust (e.g., heavy-duty diesel trucks). DPM will also be emitted during operation from maintenance and testing of the emergency generator. The California Emissions Estimator Model (CalEEMod) Version 2022.1.1.30 was used to estimate DPM emissions during construction (CAPCOA 2025). For the construction HRA, the CalEEMod scenario for the Project was adjusted to reduce diesel truck one-way trip distances to 3.5 miles to estimate emissions from truck pass-by at proximate receptors to the 210 and 10 freeways.

Construction scenario assumptions, including phasing, equipment mix, and vehicle trips, were based on information provided by the Applicant and CalEEMod default values when Project specifics were not known.

For purposes of estimating Project emissions (including on-site and off-site construction activities) and based on information provided by the Applicant and engineers, construction of the Project would commence in October 2025[3] and would last approximately 14 months, ending in November 2026.[4] The Project is assumed to have a 30-year lifespan (i.e., ending in 2056) and at the end of operation will be decommissioned. However, the EMFAC and OFFROAD models in CalEEMod only have emission factors through 2050. As such, the year 2050 was assumed for estimating emissions from the decommissioning phase. The analysis contained herein is based on the following assumptions (duration of phases are approximate):

- Demolition of Existing Facilities / Site Preparation – 2 months
- Grading – 1 month
- Collector Substation Installation – 5 months
- Battery/Container Installation – 6 months
- SCE Substation Construction/Upgrades – 12 months
- Gen-tie Installation – 3 months[5]
- Decommissioning – 6 months (year 2056)

Tier 4 Final offroad equipment would be used during construction. The SCE required improvements conservatively assumed a default tier mix. The construction equipment mix and vehicle trips used for estimating the Project-generated construction emissions are shown in Table 1, Construction Scenario Assumptions.

3 The analysis assumes a construction start date of October 2025, which represents the earliest date construction would initiate. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

4 The analysis assumes overlap of construction phases. See Attachment A for detailed construction schedule assumptions.

5 For modeling purposes the gen-tie line construction was assumed to be up to 3 months but will likely be less.

Table 1. Construction Scenario Assumptions

Offroad Sources

During irregular maintenance, the Project may require the movement or replacement of battery enclosures during the lifetime of the Project. As such, the use of a crane was assumed to assist the lifting and movement of the BESS containers. CalEEMod was used to estimate emissions of the crane assuming 1 day of operation every 5 years.

Stationary Sources

Following the completion of construction activities, the Project would generate criteria pollutant emissions from maintenance and testing of a backup diesel emergency generator. It was conservatively assumed that the generator is rated at 400 horsepower and would operate up to 200 hours per year for maintenance and testing purposes and potential emergency use based on SCAQMD permit limits. The Project applicant has committed to using a US EPA certified Tier 4 Final generator.

The estimated DPM emissions during construction of the Project are shown in Table 2.

Table 2. Construction DPM Emissions

Year	DPM Emissions (pounds)
2025	19.84
2026	65.27
2050	3.49
Total	**88.61**

Source: See Attachment A.
Notes: DPM = diesel particulate matter.
Annual emissions of exhaust PM_{10} in tons were converted to pounds by multiplying by 2,000.

The estimated DPM emissions during operation of the Project are shown in Table 3.

Table 3. Operation DPM Emissions

Source	DPM Emissions (pounds)
Emergency Generator	1.76
Offroad Equipment	0.13
Total	**1.90**

Source: See Attachment A.
Notes: DPM = diesel particulate matter.
Annual emissions of exhaust PM_{10} in tons were converted to pounds by multiplying by 2,000.

3 Modeling Methodology

The dispersion modeling was performed using American Meteorological Society/U.S. Environmental Protection Agency Regulatory Model (AERMOD) View Version 13.0.0, which is the model SCAQMD recommends for atmospheric dispersion of emissions. AERMOD is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain (USEPA 2023). The health database version 22118 was used in HARP2 (CARB 2022). The AERMOD modeling parameters were based on the SCAQMD guidance (SCAQMD n.d.) which are based on the Office of Environmental Health Hazard Assessment *Guidance Manual for Preparation of Health Risk Assessments* (OEHHA 2015). Table 4 provides the principle modeling parameters used in the assessment. All available electronic input and output files associated with the AERMOD and HARP2 modeling was included in Attachment B.

Table 4. American Meteorological Society/Environmental Protection Agency Regulatory Model Principle Parameters

Parameter	Details
Meteorological Data	AERMOD-specific meteorological data for the Azuza air monitoring station (060370002) was used for the dispersion modeling. A 5-year meteorological data set from 2017 through 2021 was obtained from the SCAQMD in a preprocessed format suitable for use in AERMOD (SCAQMD n.d.).
Urban versus Rural Option	Urban dispersion option was selected due to the developed nature of the Project area and per SCAQMD guidelines. The population for Los Angeles County from the SCAQMD guidelines was used.
Terrain Characteristics	The elevation of the site is 590 feet above sea level and the surrounding area is predominantly flat.
Elevation Data	Digital elevation data were imported into AERMOD and elevations were assigned to receptors and emission sources, as necessary. Digital elevation data were obtained through the AERMOD View in the United States Geological Survey's National Elevation Dataset format with a resolution of 1 degree (approximately 30 meters), consistent with the SCAQMD guidance (SCAQMD n.d.).
Source Release Characterizations	The modeled line of volume sources was placed to cover the site, transmission line, and SCE upgrades for exhaust emissions. A plume height dimension of 10 meters, a plume width dimension of 10 meters, and a release height of 5 meters was assumed for off-road equipment (SCAQMD 2008). This same volume source was used to model emissions from offroad equipment during operation. For offsite truck emissions, a line of volume sources with a plume height dimension of 6.8 meters, a plume width dimension of 8.6 meters, and a release height of 3.4 meters was assumed (SBCAPCD 2023). For the emergency generator, the following source parameters were assumed: stack temperature of 931°F; stack diameter of 5.3 inches; release height of 8.2 feet; and exhaust flow rate of 1,829 cubic feet per minute (SBCAPCD 2023).
Regulatory Options	Default regulatory options were used in AERMOD.

Note: See Attachment B.

AERMOD was run with all sources emitting unit emissions (1 gram per second) to obtain the necessary input values for HARP2. The line of volume sources was partitioned evenly based on the 1 gram per second emission rate. The ground-

level concentration plot files were then used to estimate the long-term cancer health risk to an individual, and the noncancerous chronic health indices.

Cancer risk is defined as the increase in probability (chance) of an individual developing cancer due to exposure to a carcinogenic compound, typically expressed as the increased chances in one million. Maximum Individual Cancer Risk is the estimated probability of a maximally exposed individual potentially contracting cancer as a result of exposure to TACs over a period of 30 years for residential receptor locations and 25 years for worker locations (SCAQMD 2024). However, as the exposure duration is only as long as the construction duration, 14 months was assumed for exposure. The exposure duration for decommissioning was assumed to be 7 months. The operational exposure duration was assumed to be 30 years for residential and sensitive receptors and 25 years for worker receptors. Cancer risk less than 10 in 1 million means that adverse health effects are not expected. The deposition rate of 0.02 meters per second was used (SCAQMD 2024).

The SCAQMD has also established noncarcinogenic risk parameters for use in HRAs since some TACs increase noncancerous health risk due to long-term (chronic) exposures and some TACs increase noncancerous health risk due to short-term (acute) exposures. Chronic exposure is evaluated in the construction HRA. Noncarcinogenic risks are quantified by calculating a hazard index, expressed as the ratio between the ambient pollutant concentration and its toxicity or reference exposure level (REL), which is a concentration at or below which health effects are not likely to occur. The chronic hazard index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. A hazard index less of than one (1.0) means that adverse health effects are not expected. There is no REL for acute health impacts from DPM, and, thus, acute risk was not evaluated.

4 Receptors Used for Evaluating Modeled Impacts

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution include children, the elderly, athletes, and people with cardiovascular and chronic respiratory diseases. Facilities and structures where these air pollution-sensitive people live or spend considerable amounts of time are known as sensitive receptors. Land uses where air-pollution-sensitive individuals are most likely to spend time include schools and schoolyards, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential communities (sensitive sites or sensitive land uses) (CARB 2005). The SCAQMD identifies sensitive receptors as residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes (SCAQMD 1993). The closest sensitive receptors to the Project site are residences approximately 250 feet west of the Project site. There are also worker receptors within 2 kilometers of the Project site. A uniform cartesian grid of 25 meter spacing was placed over residences proximate to the Project site and converted to discrete receptors. Discrete receptors were placed on worker and sensitive receptors proximate to the site. The following sensitive receptors[6] were identified within 2 kilometers of the Project site: Ben Lomond Elementary School, Barranca Elementary School, Cedargrove Elementary School, Cypress Elementary School, Charter Oak High School, Royal Oak Middle School, Sonrise Christian School, Sierra Vista Middle School, Covina High School, Baby Steps Family Home Daycare, Covina Rehabilitation Center, Harvard Creek Post Acute, and Emanate Health Inter-Community Hospital. Figure 3 shows the residential, worker, and sensitive receptors within 2 kilometers of the Project site.

[6] Sensitive receptors for the purposes of the HRA are defined by the SCAQMD as residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes. This definition differs from that of the SCAQMD LST receptor definition. As such, the receptors for each analysis are different.

Health Risk Assessment for the Covina Reliability Project

5 Summary of Results

A summary of the results of the HRA are provided in Tables 5 and 6. AERMOD and HARP2 outputs are contained in Attachment B.

Table 5. Summary of Cancer Health Risk Results

Receptor Type	UTME (m)	UTMN (m)	Cancer Risk (in a million)	Significance Threshold (in a million)
MEIR	418671.75	3772791.75	7.5	≥10
MEIW	418892	3772764.65	1.7	≥10
Sensitive Receptor*	420522.56	3773306.25	0.6	≥10

Source: See Attachment B.
Notes: m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North; NA = not applicable.
* The sensitive receptor with the highest health risk is Charter Oak High School due to the dispersion characteristics, terrain, and meteorology.

Table 6. Summary of Chronic Non-Cancer Health Risk Results

Receptor Type	UTME (m)	UTMN (m)	Chronic HI	Health Endpoint(s)	Significance Threshold (HI)
MEIR	418671.75	3772791.75	0.01	respiratory	>1
MEIW	418892	3772764.65	0.1	respiratory	>1
Sensitive Receptor*	420522.56	3773306.25	0.001	respiratory	>1

Source: See Attachment B.
Notes: HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North; NA = not applicable.
* The sensitive receptor with the highest health risk is Charter Oak High School due to the dispersion characteristics, terrain, and meteorology.

6 Conclusions

As shown in Section 5, the results of the HRA are less than significant for the construction of the Project including SCE improvements. The AERMOD and HARP2 outputs are provided in Attachment B. Based on this analysis, the residential, worker, and sensitive receptors in close proximity to the Project including SCE improvements would not be exposed to TACs at levels above significance thresholds established by SCAQMD.

The results determined in this analysis reflect reasonable estimates of source emissions and exhaust characteristics, available meteorological data near the Project site, and the use of currently approved air quality models. Given the limits of available tools for such an analysis, the actual impacts may vary from the estimates in this assessment. However, the combined use of the AERMOD dispersion model and the health impact calculations required by the Office of Environmental Health Hazard Assessment (OEHHA) and SCAQMD tend to over-predict impacts such that they produce conservative (i.e., health-protective) results. Accordingly, the health impacts are not expected to be higher than those estimated in this assessment.

As such, the Project including SCE improvements would not result in significant impacts to proximate sensitive and worker receptors.

Sincerely,

Adam Poll, QEP, LEED AP BD+C
Senior Air Quality Specialist

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	23.4	annual days of extreme heat
Extreme Precipitation	6.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	78.0
AQ-PM	79.9
AQ-DPM	32.2
Drinking Water	96.7
Lead Risk Housing	60.5
Pesticides	0.00
Toxic Releases	70.6
Traffic	34.4
Effect Indicators	—
CleanUp Sites	59.6
Groundwater	17.5
Haz Waste Facilities/Generators	65.2
Impaired Water Bodies	0.00
Solid Waste	75.7
Sensitive Population	—
Asthma	48.1

Cardio-vascular	37.3
Low Birth Weights	41.7
Socioeconomic Factor Indicators	—
Education	62.5
Housing	66.1
Linguistic	37.0
Poverty	44.9
Unemployment	77.8

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	68.66418581
Employed	84.28076479
Median HI	66.62389324
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	64.0
Healthy Places Index Score for Project Location (b)	71.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Based on applicant provided information.
Construction: Off-Road Equipment	Based on applicant provided information.
Construction: Trips and VMT	Based on applicant provided information.
Operations: Energy Use	Energy for auxiliary use.
Operations: Water and Waste Water	No indoor water use.
Operations: Refrigerants	SF6 emissions estimated outside of CalEEMod.
Operations: Off-Road Equipment	One crane used to move containers every few years.
Operations: Emergency Generators and Fire Pumps	100% load assumed.
Operations: Generators + Pumps EF	Tier 4
