EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE ---- State Response Sites

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---- Solid Waste Information System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---- Leaking Underground Storage Tanks on Indian Land
CPS-SLIC ---- Statewide SLIC Cases

Lists of state and tribal registered storage tanks

FEMA UST ---- Underground Storage Tank Listing
INDIAN UST ---- Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ---- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS ---- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT ---- Waste Management Unit Database
HAULERS ---- Registered Waste Tire Haulers Listing
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
ODI ---- Open Dump Inventory
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
IHS OPEN DUMPS ---- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

AOCONCERN ---- Key Areas of Concerns in Los Angeles County
US HIST CDL ---- Delisted National Clandestine Laboratory Register
HIST Cal-Sites ---- Historical Calsites Database
SCH ---- School Property Evaluation Program
CDL ---- Clandestine Drug Labs
Toxic Pits ---- Toxic Pits Cleanup Act Sites
US CDL ---- National Clandestine Laboratory Register

Local Land Records

LIENS ---- Environmental Liens Listing

LIENS 2	CERCLA Lien Information
DEED	Deed Restriction Listing

Records of Emergency Release Reports

HMIRS	Hazardous Materials Information Reporting System
CHMIRS	California Hazardous Material Incident Report System
LDS	Land Disposal Sites Listing
MCS	Military Cleanup Sites Listing

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/23/2023 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 8 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 77 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 09/23/2023 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 09/19/2023 has revealed that there are 13 Cortese sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 2 DRYCLEANERS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 13 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the

environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
SO CAL GAS/COVINA MG	222 WEST EDNA PLACE	W 1/2 - 1 (0.870 mi.)	Z194	799

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

ROTHE AUTO SERVICE	601 E SAN BERNARDI	SW 0 - 1/8 (0.104 mi.)	F70	333

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

CERS:
Name: CONNECTOR CONTACTS INC.
Address: 714 E EDNA PL
City,State,Zip: COVINA, CA 91723
Site ID: 21359
CERS ID: 10283632
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 21359
Site Name: Connector Contacts Inc.
Violation Date: 10-12-2022
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 11/22/2022. OBSERVATION: Observed waste oil inside secondary containment. CORRECTIVE ACTION: Submit photos/documentation to the CUPA demonstrating the spill inside secondary containment has been properly removed and managed.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 21359
Site Name: Connector Contacts Inc.
Violation Date: 11-07-2016
Citation: HSC 6.5 25250.19(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25250.19(c)
Violation Description: Failure to record in an operating log and retain for three years the following information for each shipment of recycled or exempted oil: 1) The name and address of the used oil recycling facility or generator claiming the oil meets the requirements of HSC 6.5 25250.1. 2) The name and address of the facility receiving the shipment. 3) The quantity of oil delivered. 4) The date of shipment or delivery. 5) A cross-reference to the records and documentation required under HSC 6.5 25250.1.
Violation Notes: Returned to compliance on 12/06/2016. OBSERVATION: Bills of lading or manifests for the management of lead acid batteries for the last three years were not found on site. A copy of each bill of lading must be kept on site for at least three years. [enter specific observations] CORRECTIVE ACTION: Immediately locate a copy of all bills of lading or manifests for lead acid batteries for the last three years, maintain them on site, and submit copies to the CUPA.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

J&J DOOR CLOSER SERVICE INC (Continued) **1000110997**

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Year:	2011
Gepaid:	CAD981626906
TSD EPA ID:	CAT000613893
CA Waste Code:	134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.168

Address: 716 E EDNA PL # F
City,State,Zip: COVINA, CA 91723
Site ID: 124890
CERS ID: 10286347
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 124890
Site Name: J & J DOOR CLOSER SVC INC
Violation Date: 03-07-2023
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 03/22/2023. OBSERVATION: The business failed to electronically submit a site map with all required content including: north orientation, loading area, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shut offs, evacuation staging area, hazardous materials/waste storage areas and emergency response equipment. CORRECTIVE ACTION: Electronically submit a revised ste map to include the location of your universal waste aerosol cans processing area and the location of the 55-gallon steel drum containing the residues from the processed aerosol cans.
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 124890
Site Name: J & J DOOR CLOSER SVC INC
Violation Date: 02-13-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 03/21/2018. OBSERVATION: Observed 2 x 55-gallon drums and 6 x 5-gallon pails of waste oil without hazardous label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the containers listed above have been properly labeled.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 124890
Site Name: J & J DOOR CLOSER SVC INC
Violation Date: 02-13-2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or

J&J DOOR CLOSER SERVICE INC (Continued) **S113008201**

	stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 03/21/2018. OBSERVATION: Observed 6 x 5-gallon pail of waste oil without lids. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the containers listed above have been properly closed.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	124890
Site Name:	J & J DOOR CLOSER SVC INC
Violation Date:	02-13-2018
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 03/21/2018. OBSERVATION: Uniform Hazardous Waste Manifests/ Receipts of disposal for waste oil & parts washer service were not available at the time of inspection. CORRECTIVE ACTION: Locate the most recent receipt of manifest showing disposal of waste oil and parts washer and submit copies to the CUPA.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	124890
Site Name:	J & J DOOR CLOSER SVC INC
Violation Date:	02-13-2018
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 03/21/2018. OBSERVATION: Observed waste oil spill near the 5-gallon pails of waste oil. CORRECTIVE ACTION: Submit photos/documentation to the CUPA demonstrating the spill has been properly removed and managed. Provide secondary containment on the 55-gallon drums of waste oil to prevent spills and overflows from the containers.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	124890
Site Name:	J & J DOOR CLOSER SVC INC
Violation Date:	03-07-2023
Citation:	HSC 6.5 25201.16(f) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.16(f)
Violation Description:	Failure to comply with the applicable requirements related to accumulation and containment standards for universal waste aerosol cans.

J&J DOOR CLOSER SERVICE INC (Continued) **S113008201**

Violation Notes:	Returned to compliance on 03/22/2023. OBSERVATION: Business failed to comply with all the applicable requirements related to accumulation and containment standards for universal waste aerosol cans. Observed an open container of aerosol cans approximately 4ft x 4 ft x 2.5 ft containing non-empty aerosol cans (Processed and unprocessed aerosol cans.). CORRECTIVE ACTION: 1.) Label containers of universal waste with the following: "Universal Waste - Aerosol Cans" 2.) Mark the accumulation start date on the label. Universal waste aerosol cans may be accumulated for up to one year at each site. 3.) Segregate the processed cans from the unprocessed cans in separate containers. 4.) Cover container of the non-empty aerosol cans at the end of each workday. 5.) Develop and implement a written operating procedure for safely processing universal waste aerosol cans and handling emergencies. 6.) Label the 55-gallon steel drum use to collect the residues removed from the aerosol cans as hazardous waste.

Citation:	HSC 6.5 25201.16(j) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.16(j)
Violation Description:	Failure to notify the CUPA of aerosol can processing procedures prior to commencement of operations
Violation Notes:	Returned to compliance on 03/22/2023. OBSERVATION: Owner/Operator failed to notify CUPA of aerosol can processing procedures prior to starting this process. CORRECTIVE ACTION: Submit required notification to CUPA of aerosol can processing procedures. Discontinue processing aerosol cans until this notification is submitted to CUPA. The notification shall be completed, dated, signed and shall include all of the following information: 1.) The name, EPA ID #, site address, mailing address and telephone number. 2.) A description of the universal waste aerosol can processing activities, including the type and estimated volumes or quantities of universal waste aerosol cans to be processed monthly, the treatment process, equipment descriptions and design capacities. 3.) A description of the characteristics and management of any hazardous waste residuals. 4.) Within 30 days of any change in operation which necessitates modifying any of the information submitted in the notification, the handler shall submit an [Truncated]

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violations:
Site ID: 123650
Site Name: HYDRO FITTING MFG CORP
Violation Date: 01-04-2022
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 03/24/2022. OBSERVATION: The business failed to electronically submit complete and accurate chemical inventory information for all hazardous materials on site at or above reportable quantities. CORRECTIVE ACTION: Electronically submit complete and accurate chemical inventory information for all hazardous materials on site at or above reportable quantities. Add Nitrogen gas to your hazardous materials inventory.

Address:	705 E SAN BERNARDINO RD
City,State,Zip:	COVINA, CA 91723
Site ID:	562751
CERS ID:	10295515
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	562751
Site Name:	First Class Collision Center, LLC
Violation Date:	12-11-2019
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 02/06/2020. OBSERVATION: Uniform Hazardous Waste Manifests for waste paint, waste oil and waste coolant were not available for review at the time of inspection. CORRECTIVE ACTION: Locate copies of manifest or receipt showing disposal of waste paint, waste coolant and waste oil and submit the most recent for each waste stream to the LACoFD.
Violation Division:	Los Angeles County Fire Department

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators,

Site ID:	19328
Site Name:	CITRUS TRANSMISSION
Violation Date:	10-21-2016
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a site map with all required content.
Violation Notes:	Returned to compliance on 10/10/2017. OBSERVATION: The annotated site map submitted to the CUPA does not include CORRECTIVE ACTION: Revise the annotated Site Map to include all required content and submit electronically in the California Environmental Reporting System

CITRUS TRANSMISSION (Continued) **S113049546**

(CERS).
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 19328
Site Name: CITRUS TRANSMISSION
Violation Date: 06-24-2013
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: FACILITY FAILED TO LABEL USED OIL AND USED ANTI-FREEZE CONTAINERS.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 19328
Site Name: CITRUS TRANSMISSION
Violation Date: 10-21-2016
Citation: HSC 6.5 25250.19(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25250.19(c)
Violation Description: Failure to record in an operating log and retain for three years the following information for each shipment of recycled or exempted oil: 1) The name and address of the used oil recycling facility or generator claiming the oil meets the requirements of HSC 6.5 25250.1. 2) The name and address of the facility receiving the shipment. 3) The quantity of oil delivered. 4) The date of shipment or delivery. 5) A cross-reference to the records and documentation required under HSC 6.5 25250.1.
Violation Notes: Returned to compliance on 11/04/2016. OBSERVATION: Copies of hazardous waste disposal records for [whichever year(s)] were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by [date, 30 days from now].
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 19328
Site Name: CITRUS TRANSMISSION
Violation Date: 06-24-2013
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: FACILITY FAILED TO MAINTAIN A CURRENT MANIFEST FOR USED OIL, USED ANTI-FREEZE, SLUDGE FROM JET WASH AND PARTS CLEANERS.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

CITRUS TRANSMISSION (Continued) **S113049546**

Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 06/01/2023. OBSERVATION: The business failed to electronically submit complete and accurate chemical inventory information for all hazardous materials on site at or above reportable quantities. Observed 2 x 85-gallons of motor oil, 2 x 120-gallon of motor oil, and (3) cylinders or propane gas. CORRECTIVE ACTION: Electronically submit complete and accurate chemical inventory information for all hazardous materials on site at or above reportable quantities in the California Environmental Reporting System (CERS). Add the motor oil and propane gas to your chemical inventory.

Site ID: 19495
Site Name: CITY OF COVINA
Violation Date: 05-23-2023
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Operations/Maintenance - General
Violation Notes: Returned to compliance on 06/27/2023. OBSERVATION (1) Observed (3) open containers of batteries. Universal Waste handler failed to contain the UW batteries in a closed structurally sound container. 22 CCR 23 66273.33(a). UW Handler failed to properly label or marked universal waste batteries or container or package in which batteries are contained with the following phrase: "Universal Waste - Batteries". CORRECTIVE ACTION (1): Universal Waste handler shall contain the batteries in a container that is structurally sound, compatible with the battery and its contents, and shall lack of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions. Label the containers with the following phrase: "Universal; Waste - Batteries". OBSERVATION (2): Observed broken fluorescent bulb on the ground and boxes of fluorescent bulbs that were not structurally sound. CORRECTIVE ACTION (2): UW handler shall immediately clean up and place in a container any lamp that is broken. Container [Truncated]

Violations:
Site ID: 35587
Site Name: HARRY'S AUTO REPAIR INC
Violation Date: 09-29-2022
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 11/14/2022. OBSERVATION: Observed waste oil containers with hazardous waste labels but no markings. The labels were not marked with the generator's name and address, EPA ID number, contents of the drums and accumulation start date. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the containers listed above have been properly labeled.

Violation Date:	06-12-2018
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 12/21/2018. OBSERVATION: Observed 4 x 5-gallon pails and 1 x 30-gallon drum of waste paint without hazardous waste labels. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above have been properly labeled. The hazardous waste labels must be marked with the generator's name, address, EPA ID number, contents of the container, physical state of the contents and the accumulation start date.
Violation Division:	Los Angeles County Fire Department

Violation Source:	CERS,
Site ID:	272726
Site Name:	DG Collision LLC
Violation Date:	08-21-2019
Citation:	Un-Specified
Violation Description:	Hazardous Waste Generator Program - Administration/Documentation - General Local Ordinance
Violation Notes:	Returned to compliance on 09/11/2019. OBSERVATION: Owner/Operator failed to obtain or maintain an active hazardous waste and hazardous materials permit. CORRECTIVE ACTION: Every business or business concern within the jurisdiction of the LACoCUPA and subject to one or more of the program elements shall be required to apply for, pay the permit fees, and obtain from the LACoCUPA a unified program facility permit for the program elements applicable to such facility prior to the commencement of any business or activity related to any of the program elements. The permit required under this section shall be posted and conspicuously displayed at the location falling under the requirements of this chapter. Every person, business, or business concern within the jurisdiction of the LACoCUPA and subject to the requirements of one or more of the program elements shall be required to pay the applicable annual fees and any applicable late payment penalty and apply for and obtain from the LACoCUPA a unified program [Truncated]

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not

C & L AUTO BODY (Continued) **S123537355**

hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 12/21/2018. OBSERVATION: Observed 2 x 55-gallon drums of spray booth filters and 1 x 30-gallon drum of waste paint without an accumulation start date. There were no manifests or receipts demonstrating disposal of waste paint or spray booth filters within the past 12 months. CORRECTIVE ACTION: Discontinue storage of hazardous waste over 180 days from the accumulation start date. Dispose the observed hazardous waste (waste paint and spray booth filters) and submit a copy of the manifest/receipt to the LACoFD.

Address: 793 E SAN BERNARDINO RD
City,State,Zip: COVINA, CA 91723
Site ID: 119035
CERS ID: 10294843
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 119035
Site Name: GEM AUTO REPAIR
Violation Date: 06-23-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 10/10/2017. OBSERVATION: The business failed to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. CORRECTIVE ACTION: Electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. Review and submit your submittal for 2017.
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 119035
Site Name: GEM AUTO REPAIR
Violation Date: 06-23-2017
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 12/14/2017. OBSERVATION: The generator has not obtained an active EPA ID number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an active EPA ID number. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have obtained an EPA ID number.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 03-23-2023
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 04/18/2023. OBSERVATION: Observed oil spill inside the secondary containment and outside the secondary containment. CORRECTIVE ACTION: Clean up spillage of hazardous waste immediately after its occurrence.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 54155
Site Name: ORIGINAL JAGUAR
Violation Date: 03-23-2023
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 04/18/2023. OBSERVATION: Observed 3 x 55-gallon drums of waste oil and 1 x 55-gallon drum of waste coolant without hazardous waste labels. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the containers listed above have been properly labeled.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 54155
Site Name: ORIGINAL JAGUAR
Violation Date: 03-23-2023
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 04/18/2023. OBSERVATION: Observed waste oil inside the secondary containment and outside the secondary containment. CORRECTIVE ACTION: Ensure the hazardous waste storage area is being inspected weekly.
Violation Division: Los Angeles County Fire Department
Violation Program: HW

Enforcement Action:
Site ID: 91614
Site Name: AMERICAN EXPO INC
Site Address: 650 N BARRANCA AVE # E
Site City: COVINA
Site Zip: 91723
Enf Action Date: 04-10-2023
Enf Action Type: AEO - Unified Program
Enf Action Description: Administrative Enforcement Order Based on the Unified Program Statute
Enf Action Notes: Fines/Penalties Assessed: $3,000.00. On October 31, 2022, HHMD Inspector De Silva conducted a routine inspection at American Expo Inc. The inspector observed a Class I violation. A Notice of Violation was issued and an Administrative Enforcement case was initiated for failure to comply with the following: 40 CFR I 112.3,112.6: HSC 6.67 25270.4.5(a). On July 11, 2023, company representatives participated in the settlement conference. All parties mutually agreed to a penalty in the amount of $ 3,000.00. .

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

ASSOCIATED AUTO AIR & RADIATOR (Continued) **S100930105**

Violation Date:	11-28-2022
Citation:	22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description:	Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes:	Returned to compliance on 12/22/2022. OBSERVATION: The generator has not obtained an Identification Number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without obtaining an Identification Number. EPA ID number CAL00016942 is registered to the previous owner Steve Hart as an individual. CORRECTIVE ACTION: Obtain an EPA ID number for Associated Auto Radiator Inc. as the legal business owner. Submit documentation to the CUPA demonstrating that you have obtained an Identification Number.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	93684
Site Name:	ASSOCIATED AUTO AIR RADIATOR
Violation Date:	05-08-2017
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 05/24/2017. OBSERVATION: Uniform Hazardous Waste Manifests for used coolant and sludge were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for used coolant and sludge and submit copies to the CUPA.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	93684
Site Name:	ASSOCIATED AUTO AIR RADIATOR
Violation Date:	11-28-2022
Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes:	Returned to compliance on 12/22/2022. OBSERVATION: The business failed to establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material. The emergency response plan submitted in CERS was certified by previous owner Steve hart. CORRECTIVE ACTION: Submit in CERS an emergency response plan certified by current owner.

Site Name:	ASSOCIATED AUTO AIR RADIATOR
Violation Date:	02-11-2014
Citation:	HSC 6.95 25505(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)
Violation Description:	Owner/Operator failed to complete and/or submit a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet.
Violation Notes:	Returned to compliance on 06/09/2014.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	93684
Site Name:	ASSOCIATED AUTO AIR RADIATOR
Violation Date:	11-28-2022
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 12/22/2022. OBSERVATION: Observed 2 x 15-gallon drums of waste solvent without hazardous waste label and accumulation start date. Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Date: 05-09-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 12/21/2018. OBSERVATION: The business failed to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. The last submittal was 9/22/2015. CORRECTIVE ACTION: Electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA within 30 days. On an ongoing basis, electronically submit and certify the business plan annually on or before the annual due date of March 15th of each year.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Description:	A two-vehicle collision occurred at 1023 North Grand Avenue. As a result, an estimated 1-gallon diesel fuel release from a saddle tank to asphalt took place. A contractor is enroute and will be performing a cleanup. No waterways were impacted and no road closures were imposed. The Covina Police Department and the Covina Fire Department are on-scene.

Completed Document Type: Removal Action Completion Report
Completed Date: 06/01/1994
Comments: The Department provided oversight of the remediation undertaken by the Southern California Gas Company. Activities included excavation of 6,100 tons (271 truck- loads) of soil contaminated from former manufactured gas plant operations. Sampling verified the achievment of cleanup goals. Clean imported soil was backfilled and compacted. Excavated soil was recycled by thermal treatment for use elsewhere. Activities were initiated on November 29, 1993 and excavation and backfilling were completed March 11, 1994.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Remedial or Removal Design
Completed Date: 09/30/1993
Comments: The Department approved the Removal Action Implementation and Design Plan for the Covina Manufactured Gas Plant site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 07/08/1992
Comments: The Dept completed review of PEA and recommended further action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/03/1992
Comments: Covina's Plant was built in 1904 by the Covina Valley Gas Company. It was purchased by Southern Conties Gas Co in 1911. By 1929 the plant had been dismantled. In 1958, the City of Covina acquired the site, which is today known as Edna Park and currently used as a public recreational Park. On the site the companies produced "manufactured gas" made from coal and oil. The byproducts from this operation were tars, oils, sludges, lampblack, etc which were sold for various industrial uses. Some of these byproduct residues have been found in soils at former towne gas plant sites. Out of these polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, on sampling, elevated levels of PAH, heavy metals such as lead and arsenic, and cyanides were found at the site. A PEA is required at the site to determine, if any emergency removal action is requied to reduce the potential threat to public health and the environment. The dept received a notice of intent dated March 29, 1992 to initiate a PEA.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California

BROWN INTL CORP (Continued) **1000437579**

Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/07/2023
Date Data Arrived at EDR: 08/08/2023
Date Made Active in Reports: 10/24/2023

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Southeast Map:	50005403 SAN DIMAS, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

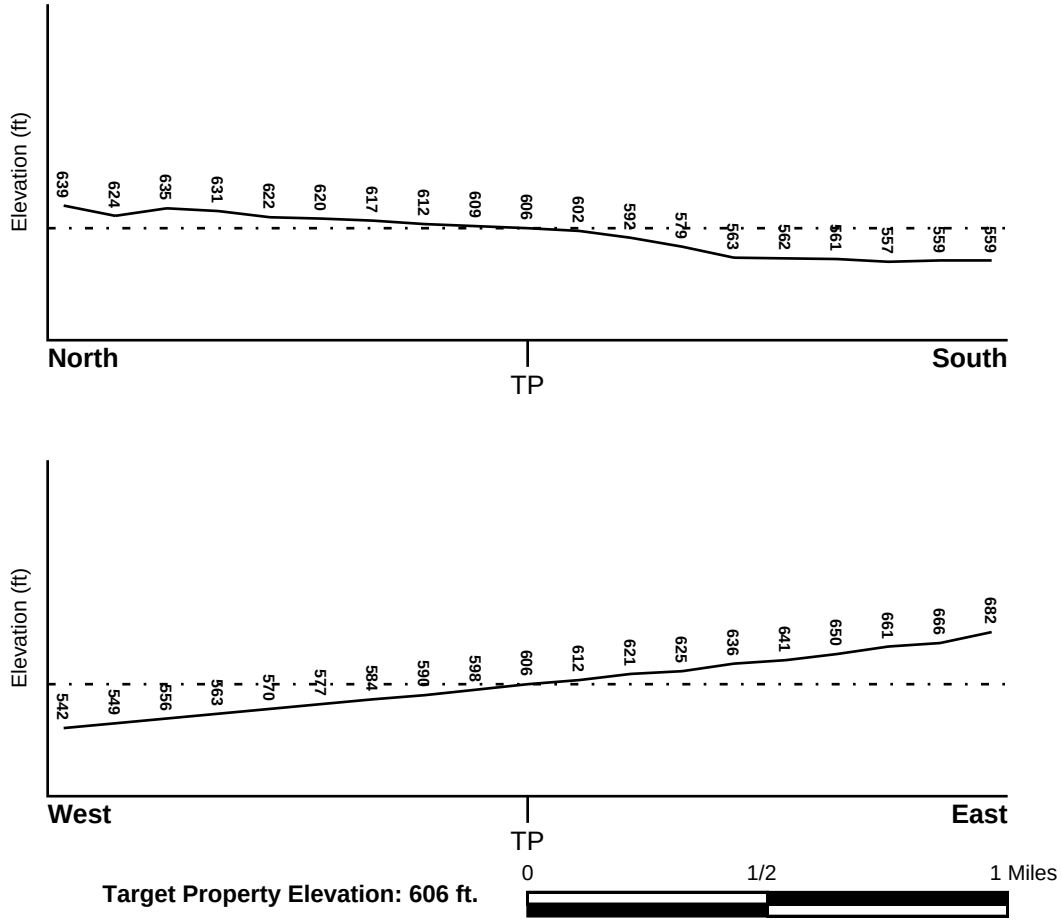
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 606 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1700F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1725F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BALDWIN PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
10	1/2 - 1 Mile South	Not Reported
1G	1/2 - 1 Mile South	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Environmental Lien and AUL Search 1980

The EDR Environmental Lien and AUL Search 1980 report provides results from a search of available land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address and/or parcel information to:

- search for parcel number and/or legal description
- search for ownership information filed between 1980 and the most current publicly available date
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for environmental encumbering instrument(s) filed between 1980 and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Property Archives, LLC researched and compiled the land title information contained in this EDR Environmental Lien and AUL Search 1980 report on behalf of EDR.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Certified Sanborn® Map Report

01/31/24

Site Name:	Client Name:
Covina Reliability Project	NV5
Not Reported	3777 Long Beach Blvd
Covina, CA 91723	Long Beach, CA 90807-0000
EDR Inquiry # 7556491.3	Contact: Eric Fraske

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by NV5 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by NV5 were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

To: Max Margolin <Max@Upstream.energy>
Subject: Re: Covina Reliability Project - Phase 1 ESA and App Signatures

1, Recreational vehicle storage
Reynolds GMC Isuzu

2, There are no known above ground or underground storage tanks. As the tenant, we are not aware of any prior contamination events or wells on the property.

3, No prior environmental reports that we are aware of.

4, Prior to our use the site was used for new vehicle storage,

Chuck Rhodes

Thank you for the quick response, Chuck! There are a couple additional questions below that Eric has about the property and Suzanne has asked that we discuss with you. I'll have Eric give you a call on your cell.

Thank you,
Max

Subject: Re: Covina Reliability Project - Phase 1 ESA and App Signatures

Hi Max:
The shed you are inquiring about is basically empty. It houses one small piece of equipment that monitors the alarm system.

Chuck Rhodes

Hi Suzanne –

Here is the email thread with respect to the questions we just discussed on the phone. As mentioned, I'll have Eric reach out to Chuck via the phone to go over these.

Thank you,
Max

Hi Suzanne,

Just one more follow up question.

There's a small shed located on the center portion of the Site (picture attached). Are there any paints, chemicals, or hazardous materials stored in it?

Thanks,

Eric Fraske | Senior Engineer III | **NV5** | Site Assessment and Remediation

PHASE I ESA USER QUESTIONNAIRE

ASTM E-1527 provides Landowner Liability Protections to purchasers of commercial property if All Appropriate Inquiry (AAI) is completed during property acquisition. The answers to the questions below provide information to the Environmental Professional to assist the User of the referenced Phase I ESA to comply with the User Responsibilities of AAI.

Property Description			
Property Address:	680 E Edna Place, Covina, CA		
Current Occupant:	RV Storage Business		
Current Owner:	Russ Davis, Inc	Phone:	N/A
Site Contact:	Suzanne Lincoln	Phone:	N/A
Potable Water Provider:	Unknown		
Electricity Provider:	Southern California Edison		
Natural Gas Provider:	Unknown, likely SoCal Gas		
Sanitary Sewer Provider:	Unknown, likely City of Covina		
Solid Waste Disposal Provider:	unknown		
Hazardous Waste Disposal:	unknown		
Reason for Performing ESA	Due diligence in advance of acquisition		

Are you aware of any environmental liens that have been filed or recorded under Federal State, local or tribal law? If yes provide details.
□ Yes ☑ No

Are you aware of any activity or land use limitations (AULs), engineering controls or land use limitations that have been filed or recorded under Federal, State, Local or Tribal Law? If yes, provide details.
□ Yes ☑ No

Do you have any specialized knowledge of the property or experience related to the Subject Property or nearby properties so that you would have knowledge of chemicals or processes used at the property? If yes, provide details.
□ Yes ☑ No

Is the acquisition price differing from the fair market value of the property?
□ Yes ☑ No
If there is a difference, have you considered a lower price is due to contamination known or believed to be present at the property? Please provide details.
□ Yes □ No

Phase I ESA User Questionnaire - Continued

As the user of this ESA, based on your knowledge and experience with the property, are there any obvious indications of the presence or likely presence of contamination at the property? If yes, provide details.
□ Yes ☑ No

Are you aware of any information that would help the environmental professional identify conditions indicative of releases or potential releases, including past uses of the property, uses of chemicals at the property, or environmental cleanups that have taken place at the property? If yes, provide details.
□ Yes ☑ No

Do you know of any pending, past or threatened litigation or administrative proceedings related to hazardous substances or petroleum products on, in or from the property or any notices regarding possible violations of environmental laws or possible liability related to hazardous substances or petroleum products? If yes, provide details.
□ Yes ☑ No

Are there any chemical storage areas or hazardous material storage areas located at the Subject Property?
If yes, provide details.
□ Yes ☑ No

Are there any current or historical Aboveground Storage Tanks or Underground Storage Tanks? If yes, provide details.
□ Yes □ No

Unknown

Are there any current or historical wastewater treatment systems, clarifier/interceptor systems, or grease trap systems associated with the Subject Property? If yes, provide details.
□ Yes □ No

Unknown

Phase I ESA User Questionnaire - Continued

Are you aware of the existence or location of the following documents related to the Subject Property, and if yes, can copies be made available for review by the Environmental Professional?

□ Previous Environmental Site Assessment reports or Investigation reports
□ Environmental Permits
□ Registrations for underground storage tanks (USTs)
□ Spill Prevention Containment and Contingency Plans (SPCC)
□ Stormwater Pollution Prevention Plans (SWPPP)
□ Risk Assessments
□ Hydrogeologic Reports related to the property or surrounding area
□ Notices of Violation from governmental agencies regarding past or current violations of environmental laws or related to environmental liens encumbering the property
□ Hazardous waste manifests or generation reports
□ Recorded land and activity use limitations
□ Geotechnical Studies

1. PROJECT DESCRIPTION

1.1. PROJECT CATEGORY

REDEVELOPMENT PROJECTS. Complete this section if the project will redevelop an existing development.	
The redevelopment will **create and/or replace 5,000 square feet** or more of impervious surface and will be:	
1. a restaurant (SIC 5812)	Yes ☐
2. a parking lot	Yes ☐
3. an automotive service facility (SIC 5013, 5014, 5511, 5541, 7532-7534 and 7536-7539)	Yes ☐
4. a retail gasoline outlet	Yes ☐
5. on an existing site of 10,000 square feet or more of impervious surface area	Yes ☒
6. within an industrial park of 10,000 square feet or more of surface area	Yes ☐
7. within a commercial mall (including strip malls) of 10,000 square feet or more of surface area	Yes ☐
Or the redevelopment project will:	
8. create and/or replace 2,500 square feet or more of impervious area; discharge stormwater likely to impact sensitive biological species or habitat; and be in, directly adjacent to, or discharge directly to an ASBS[1] or "Sensitive Ecological Area"[2]	Yes ☐

NEW DEVELOPMENT PROJECTS. Complete this section if the existing project site is undeveloped.	
The new development project will:	
9. create 5,000 square feet or more of impervious surface and will be either a restaurant, parking lot, auto service facility (SIC 5013, 5014, 5511, 5541, 7532-7534 and 7536-7539), or retail gasoline outlet	Yes ☐
10. disturb 1 acre or more and add 10,000 square feet or more of impervious surface	Yes ☐
11. be an industrial park of 10,000 square feet or more of surface area	Yes ☐
12. be a commercial mall (including strip malls) of 10,000 square feet of surface area	Yes ☐
13. create 2,500 square feet or more of impervious area; discharge stormwater likely to impact sensitive biological species or habitat; and be in, directly adjacent to, or discharge directly to an ASBS[1] or "Sensitive Ecological Area"[2]	Yes ☐

[1] Areas of Special Biological Significance, as defined in the Water Quality Control Plan for Ocean Waters of California.
[2] As identified by the County of Los Angeles' Significant Ecological Areas Program (http://planning.lacounty.gov/site/sea/home/).

1.2. PROJECT DESCRIPTION

Total Project Area (ft^2): 148,460

Total Project Area (Ac): 3.41

Site Area Breakdown:

530 E. Edna Place **(West Lot)**: 58,168 sf / 1.34 ac

680 E. Edna Place **(East Lot)**: 90,292 sf / 2.07 ac

WEST LOT

	Area (ft^2)	Area (ac)	Percentage (%)
EXISTING CONDITIONS			
Pervious Area:	0	0	0%
Impervious Area:	58,168	1.34	100%
Total Area:	58,168	1.34	-
PROPOSED CONDITIONS			
Pervious Area:	28,862	0.663	49.6%
Impervious Area:	29,306	0.673	50.4%
Total Area:	58,168	1.34	-

EAST LOT

	Area (ft^2)	Area (ac)	Percentage (%)
EXISTING CONDITIONS			
Pervious Area:	0	0	0%
Impervious Area:	90,292	2.07	100%
Total Area:	90,292	2.07	-
PROPOSED CONDITIONS			
Pervious Area:	46,430	1.066	51.4%
Impervious Area:	43,862	1.007	48.6%
Total Area:	90,292	2.07	-

SITE CHARACTERISTICS

DRAINAGE PATTERNS/CONNECTIONS	The Project consists of **two different sites** (permitting together): - 530 E. Edna Place (referred to as **"West Lot"** within this report) - 680 E. Edna Place (referred to as **"East Lot"** within this report) **Existing:** In existing conditions, both lots are fully developed and consist of 100% impervious surfaces. The West Lot consists of commercial/industrial buildings and parking spaces, and the East Lot is solely comprised of a parking lot. Storm drain infrastructure does not exist within Project limits. Stormwater runoff for both West and East Lots sheet flows south/southwest onto the existing Metrolink railroad tracks. Runoff then flows west before reaching N. Barranca Ave, where it continues south and is captured by existing catch basins and storm drain infrastructure. Portions along the north edges of the lots flow north onto E. Edna Place, where it continues west and is captured by existing catch basins along E. Edna Place that connect to the same infrastructure along N. Barranca Ave. Stormwater discharges downstream along Unit 1 - Line B on Washington Blvd, before discharging to Charter Oak Wash. Stormwater then connects to Walnut Creek Channel, then to the San Gabriel River Reach 3, and ultimately to the Pacific Ocean. The receiving waterbody and downstream waterbodies have the following impairments per the most recent California Clean Water Act Section 303(d) list (contributing confluences have also been included per Caltrans Water Quality for reference): • Little Dalton Wash: Copper, Endosulfan 1, Indicator Bacteria, Lead, Zinc, • Puente Creek: Indicator Bacteria, Selenium • San Dimas Wash: Copper, Indicator Bacteria, Zinc • San Gabriel River (Reach 3): Chlorine, Indicator Bacteria • San Jose Creek (Reach 1): Chlorine, Indicator Bacteria, pH, Total Dissolved Solids, Toxicity • Santa Fe Dam Park Lake: Mercury, PCBs, pH • South San Jose Creek: Toxicity • Walnut Creek Wash: Benthic Community Effects, Copper, Indicator Bacteria, pH

	Proposed: The project proposes to match drainage patterns to those of existing conditions. Runoff will surface flow south/southwest, discharging into respective basins for treatment. Due to site constraints, the West lot proposes an underground infiltration system (BMP-1), whereas the East lot proposes an above-ground bioretention basin (BMP-2). Flows that exceed the respective basin capacity will overflow south via bubble-out grate overflow (for BMP-1) or weir (for BMP-2) onto the Metrolink railroad tracks. Subsurface storm drain infrastructure is not proposed. Detention is not required due to increases in pervious area and infiltration capacity.
NARRATIVE PROJECT DESCRIPTION:	The proposed development will be a Battery Energy Storage System (BESS) site consisting of the redevelopment of two lots, a 1.34-acre West Lot (APNs: 8429-008-028, 8429-008-029) and a 2.07-acre East Lot (APNs: 8429-007-005, 8429-007-006, 8429-007-007). The Project sites will include 41 total MV transformers, associated battery megapacks for each transformer, a substation for the West Lot, and other electrical equipment as well as perimeter security screen wall, gates, storage containers, and paved access roads. BESS units will be placed on piles and only substation equipment will be placed on concrete pads. The increase in landscape and gravel areas result in lower imperviousness for the proposed lots. The Project is comprised of two drainage management areas. DMA-1 encapsulates the West Lot, and DMA-2 encapsulates the East Lot. One bioretention basin for each lot is proposed for water quality treatment. A proposed swale along the west edge of the West Lot is proposed to help direct flows.
OFFSITE RUN-ON	Offsite run-on is not expected due to proposed topographic configurations.
UTILITY AND INFRASTRUCTURE INFORMATION	The contractor shall demolish and remove from the civil limit of work line all existing utility and infrastructure, unless otherwise noted on the plan.
SIGNIFICANT ECOLOGICAL AREAS (SEAS)	N/A

1.3. HYDROMODIFICATION ANALYSIS

DOES THE PROPOSED PROJECT FALL INTO ONE OF THE FOLLOWING CATEGORIES?	YES	NO
1. *Project is a redevelopment that decreases the effective impervious area compared to the pre-project conditions.*	☒	☐
Describe: The project is proposing to replace the existing parking lots and buildings of the two sites with BESS units, a substation, paved access roads, and landscape areas. Proposed landscape and gravel surfaces will increase the perviousness of the site, as the site is 100% impervious in existing conditions.		
2. *Project is a redevelopment that increases the infiltration capacity of pervious areas compared to the pre-project conditions.*	☒	☐
Describe: The existing sites are fully developed and consist of 0% pervious areas. The project proposes landscape and gravel areas, as well as infiltration/bioretention basins with engineered media, that "increase" the site's infiltration capacity.		
3. *Project discharges directly or via a storm drain to a sump, lake, area under tidal influence, into a waterway that has a 100-year peak flow (Q_{100}) of 25,000 cfs or more.*	☐	☒
Describe: N/A		
4. *Project discharges directly or via a storm drain into concrete or otherwise engineered (not natural) channels (e.g., channelized or armored with rip rap, shotcrete, etc.), which, in turn, discharges into receiving water that is not susceptible to hydromodification impacts.*	☐	☒
Describe: Per the LA County Storm Drain GIS map, drainage areas eventually discharge to Unit 1 - Line B and Line C along N. Barranca Ave, before discharging into Charter Oak Wash and Walnut Creek Channel, both of which are engineered concrete channels. Discharge from this creek reaches the San Gabriel River, which consists of a soft-bottom channel with engineered rip rap slopes. A portion of the San Gabriel River consists of a dirt channel within the Whittier Narrows Dam section. The channel then transitions back to an engineering channel before discharging into the Pacific Ocean.		

HYDROMODIFICATION ANALYSIS AND CONTROL MEASURES

DESCRIPTION	The Project is exempt from Hydromodification due to an increase in pervious areas and infiltration capacity.

1.4. PROPERTY OWNERSHIP/MANAGEMENT

	The project site is owned by RWE Clean Energy. BMPs present will be maintained, operated, and funded by RWE Clean Energy.

2. BEST MANAGEMENT PRACTICES (BMPS)

2.1. SITE DESIGN

85TH PERCENTILE, 24-HOUR STORM DEPTH	The 85th percentile is approximately 1.0 inch using Los Angeles County 85th percentile precipitation isohyetal Hydrology Map. See LA County Hydrology Map in Appendix A.
SITE DESIGN	All Designated Projects must retain 100 percent of the Stormwater Quality Design Volume (SWQDv) on-site through infiltration, evapotranspiration, stormwater runoff harvest and use, or a combination thereof unless it demonstrated that is technically infeasible to do so. Both lots will be graded such that runoff will surface flow southwest, discharging via graded swale or flowing directly to a basin at the southwest corner of each site. The West lot utilizes an underground infiltration basin, whereas the East lot utilizes an above-ground bioretention basin. Basins will be respectively sized to retain 100 percent of the proposed SWQDv. Overflows that exceed the capacity of the basins will bubble out/spill over a weir (respectively) at the south end of the basins, discharging onto the Metrolink railroad tracks and matching existing drainage patterns.
POTENTIAL STORMWATER POLLUTANTS	Potential pollutants of concern from Table 7-3 per the Los Angeles County Low Impact Development Standards Manual include the following for Commercial and Industrial land use: • Suspended Solids • Total Phosphorus • Total Nitrogen • Total Kjeldahl Nitrogen • Total Cadmium • Total Chromium • Total Copper • Total Lead • Total Zinc

2.2. BMP LIST

DMA DESIGNATION	DMA SQUARE FOOTAGE (sf)	IMPERVIOUSNESS OF DMA (%)	STORM WATER QUALITY DESIGN VOLUME (SWQDv, cf)	BMP TYPE	BMP FOOTPRINT PROPOSED (sf)	PROVIDED BMP CAPACITY (cf)	MAXIMUM PONDING DRAWDOWN TIME (HR)	GPS COORDINATES

2.3. BMP SELECTION

2.3.1. INFILTRATION BMPS

NAME	INCLUDED
Bioretention without underdrains	☒
Drywell	☐
Infiltration Basin	☐
Infiltration Trench	☐
Permeable Pavement	☐
Proprietary Subsurface Infiltration Gallery	☐
Other:	☐
Other:	☐

DESCRIPTION	The Project will implement one bioretention basin within each lot. Due to site plan changes, the location of proposed basins and corresponding infiltration rates as shown in the Geotechnical Engineering Report conducted by Terracon (dated October 2024) slightly differ from what is currently proposed. As a result, the measured infiltration closest in proximity to the current basin locations was used: West Lot (DMA-1): - Test Location P-4 - Measured Infiltration Rate = 3.4 in./hr. - Design Rate (Reduction Factor of 5) = 0.68 in./hr. East Lot (DMA-2): - Test Location P-3 - Measured Infiltration Rate = 7.8 in./hr. - Design Rate (Reduction Factor of 5) = 1.56 in./hr. Per the Geotechnical Report, an LA County reduction factor of 5 was recommended and was incorporated above. The resulting design infiltration rates are greater than the minimum 0.3 in./hr. requirement. Rates will be used to demonstrate sufficient drawdown of proposed basins within 96 hours, provided in Attachment A.

2.3.2. RAINWATER HARVEST AND USE BMPS

NAME	INCLUDED
Above-ground cisterns	☐
Underground detention	☐

3. DRAINAGE ANALYSIS

3.1. EXISTING VS. PROPOSED CONDITIONS

As previously outlined within this report, the proposed Project will redevelop the 100% impervious commercial/industrial lots into BESS sites consisting largely of landscape and gravel areas. The increase in pervious areas from existing to proposed decreases the peak outflow and volume generated from stormwater runoff on the West and East lots. Therefore, the proposed basins are designed for LID purposes only, as detention is not required.

The tables below demonstrate the results for the existing versus proposed 2-year and 50-year 24-hour storm events, provided for reference. Existing and proposed conditions drainage maps and corresponding HydroCalc calculations and provided in **Attachment F**.

PEAK FLOW RATE

Drainage Area ID	Area (ac)	2-Year Existing Peak Flow (cfs)	2-Year Proposed Peak Flow (cfs)	50-Year Existing Peak Flow (cfs)	50-Year Proposed Peak Flow (cfs)

CUSTOM PREFABRICATED INVERTS ARE AVAILABLE UPON REQUEST. INVENTORIED MANIFOLDS INCLUDE 12-24" (300-600 mm) SIZE ON SIZE AND 15-48" (375-1200 mm) ECCENTRIC MANIFOLDS. CUSTOM INVERT LOCATIONS ON THE MC-7200 END CAP CUT IN THE FIELD ARE NOT RECOMMENDED FOR PIPE SIZES GREATER THAN 10" (250 mm). THE INVERT LOCATION IN COLUMN 'B' ARE THE HIGHEST POSSIBLE FOR THE PIPE SIZE.

2 MC-7200 TECHNICAL SPECIFICATION

INSPECTION & MAINTENANCE

STEP 1) INSPECT ISOLATOR ROW PLUS FOR SEDIMENT
- A. INSPECTION PORTS (IF PRESENT)
  - A.1. REMOVE/OPEN LID ON NYLOPLAST INLINE DRAIN
  - A.2. REMOVE AND CLEAN FLEXSTORM FILTER IF INSTALLED
  - A.3. USING A FLASHLIGHT AND STADIA ROD, MEASURE DEPTH OF SEDIMENT AND RECORD ON MAINTENANCE LOG
  - A.4. LOWER A CAMERA INTO ISOLATOR ROW PLUS FOR VISUAL INSPECTION OF SEDIMENT LEVELS (OPTIONAL)
  - A.5. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.
- B. ALL ISOLATOR PLUS ROWS
  - B.1. REMOVE COVER FROM STRUCTURE AT UPSTREAM END OF ISOLATOR ROW PLUS
  - B.2. USING A FLASHLIGHT, INSPECT DOWN THE ISOLATOR ROW PLUS THROUGH OUTLET PIPE
    - i) MIRRORS ON POLES OR CAMERAS MAY BE USED TO AVOID A CONFINED SPACE ENTRY
    - ii) FOLLOW OSHA REGULATIONS FOR CONFINED SPACE ENTRY IF ENTERING MANHOLE
  - B.3. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.

STEP 2) CLEAN OUT ISOLATOR ROW PLUS USING THE JETVAC PROCESS
- A. A FIXED CULVERT CLEANING NOZZLE WITH REAR FACING SPREAD OF 45° (1.1 m) OR MORE IS PREFERRED
- B. APPLY MULTIPLE PASSES OF JETVAC UNTIL BACKFLUSH WATER IS CLEAN
- C. VACUUM STRUCTURE SUMP AS REQUIRED

STEP 3) REPLACE ALL COVERS, GRATES, FILTERS, AND LIDS; RECORD OBSERVATIONS AND ACTIONS.

STEP 4) INSPECT AND CLEAN BASINS AND MANHOLES UPSTREAM OF THE STORMTECH SYSTEM.

NOTES

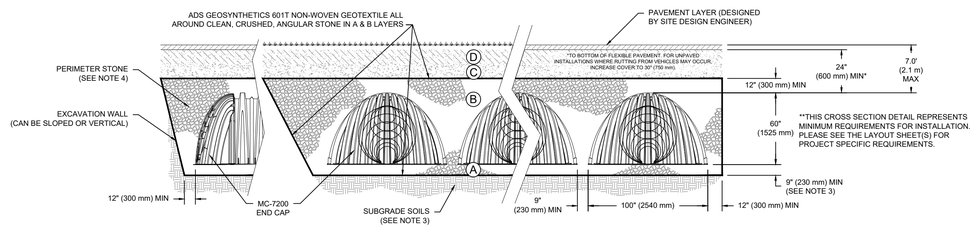
1. INSPECT EVERY 6 MONTHS DURING THE FIRST YEAR OF OPERATION. ADJUST THE INSPECTION INTERVAL BASED ON PREVIOUS OBSERVATIONS OF SEDIMENT ACCUMULATION AND HIGH WATER ELEVATIONS.
2. CONDUCT JETTING AND VACTORING ANNUALLY OR WHEN INSPECTION SHOWS THAT MAINTENANCE IS NECESSARY.

3 MC-7200 ISOLATOR ROW PLUS DETAIL

ACCEPTABLE FILL MATERIALS: STORMTECH MC-7200 CHAMBER SYSTEMS

	MATERIAL LOCATION	DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DENSITY REQUIREMENT
D	**FINAL FILL:** FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS. CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS. PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	**INITIAL FILL:** FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE ('B' LAYER) TO 24" (600 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER.	AASHTO M145[1] A-1, A-2-4, A-3 OR AASHTO M43[1] 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	BEGIN COMPACTIONS AFTER 24" (600 mm) OF MATERIAL OVER THE CHAMBERS IS REACHED. COMPACT ADDITIONAL LAYERS IN 12" (300 mm) MAX LIFTS TO A MIN. 95% PROCTOR DENSITY FOR WELL GRADED MATERIAL AND 95% RELATIVE DENSITY FOR PROCESSED AGGREGATE MATERIALS.
B	**EMBEDMENT STONE:** FILL SURROUNDING THE CHAMBERS FROM THE FOUNDATION STONE ('A' LAYER) TO THE 'C' LAYER ABOVE.	CLEAN, CRUSHED, ANGULAR STONE OR RECYCLED CONCRETE[2]	AASHTO M43[1] 3, 357, 4, 467, 5, 56, 57	NO COMPACTION REQUIRED.
A	**FOUNDATION STONE:** FILL BELOW CHAMBERS FROM THE SUBGRADE UP TO THE FOOT (BOTTOM) OF THE CHAMBER.	CLEAN, CRUSHED, ANGULAR STONE OR RECYCLED CONCRETE[2]	AASHTO M43[1] 3, 357, 4, 467, 5, 56, 57	PLATE COMPACT OR ROLL TO ACHIEVE A FLAT SURFACE.[2,3]

PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE; "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
4. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.
5. WHERE RECYCLED CONCRETE AGGREGATE IS USED IN LAYERS 'A' OR 'B' THE MATERIAL SHOULD ALSO MEET THE ACCEPTABILITY CRITERIA OUTLINED IN TECHNICAL NOTE 6.20 "RECYCLED CONCRETE STRUCTURAL BACKFILL".



NOTES:

1. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 60x101
2. MC-7200 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
3. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS. REFERENCE STORMTECH DESIGN MANUAL FOR BEARING CAPACITY GUIDANCE.
4. PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT SHALL BE GREATER THAN OR EQUAL TO 500 LBS/FT/%. THE ASC IS DEFINED IN SECTION 6.2.8 OF ASTM F2418. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

NOTE: If the software program being used allows for Stage Volume data, it is recommended to use the stage volume data from this spreadsheet. Software programs typically use linear interpolation to take stage area data and estimate stage volume data. Due to rounding differences over the total number of stages provided in this spreadsheet, the accuracy of the estimated volume could be off as much as 1%. It is recommended that the user check the software estimated volume and compare it to the volume listed in this spreadsheet to ensure the accuracy is within acceptable levels.

Covina, California
Terracon Project No. LA245153

Dear Mr. Bhatti:

We have completed the scope of Geotechnical Engineering services for the above referenced project in general accordance with Terracon Proposal No. PLA245153 dated July 26, 2024 and Purchase Order No. 4900008246-S1-N35 dated August 9, 2024. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork and the design and construction of pavements and foundations for the proposed Battery Energy Storage Systems (BESS) and substation facility.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,

Terracon

Sean Paroski, E.I.T.
Staff Engineer

Introduction

This report presents the results of our subsurface exploration and Geotechnical Engineering services performed for the proposed Battery Energy Storage System and substation facility to be located at 530 & 680 E. Edna Place in Covina, California. The purpose of these services was to provide information and geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Seismic site classification per CBC
- Site preparation and earthwork
- Foundation design and construction
- Gravel Surface Road Design and construction

The geotechnical engineering Scope of Services for this project included the advancement of test borings, electrical resistivity testing, laboratory testing, engineering analysis, and preparation of this report. The geotechnical engineering Scope of Services for our current scope of work included the following:

- One soil test boring to approximately 51.5 feet below ground surface (bgs) in the proposed substation areas
- Five soil test borings from approximately 25.5 to 26.5 feet below ground surface (bgs) in the proposed BESS areas
- Corrosion testing on soil samples obtained from one location
- Lab thermal resistivity testing on soil samples obtained from one location
- Field electrical resistivity at two locations
- Infiltration test borings at five locations from 5 to 10 feet bgs

Drawings showing the site, borings and electrical resistivity arrays are shown on the **Site Location** and **Exploration Plan**, respectively. The results of the laboratory testing performed on soil samples obtained from the site during our field exploration are included on the boring logs and/or as separate graphs in the **Exploration Results** section.

Project Description

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

Item	Description
Project Description	The project consists of a proposed Battery Energy Storage System (BESS) and substation facility. The project is located in two separated parcels. The western parcel encompasses an approximate footprint of 1.32 acres and the eastern parcel encompasses an approximate footprint of 2.1 acres. The combined footprint of the project is 3.42 acres. The BESS and substation facility will encompass an approximate footprint of 3.12 and 0.3 acres, respectively. In addition, the site development includes approximately 3,120 square feet (sqft) of proposed biofiltration basins and proposed graded swales.
Proposed Foundation Structure	We assume concrete pads and pile foundation per the clients request for the proposed BESS and inverter units. We anticipate the substation will include a control room building, self-contained structures, and other substation elements to be supported on shallow spread footings, equipment slabs-on-grade/mat foundations, and/or drilled shafts.
Maximum Loads	Assumed maximum loads for the proposed development are as follows: ▪ BESS enclosure pads: 1000 to 1200 psf contact pressure ▪ BESS Axial Load: 75 kips ▪ BESS Shear Load: 5 kips ▪ Transformers: 500 – 1,000 psf contact pressure
Grading/Slopes	We assume that the field grade will follow the existing site grades with minimum grading required to bring the site to finish grade.
Pavements	We anticipate low-volume, aggregate-surfaced and native soil access roads that will have a maximum vehicle load of 10,000 lbs. and will travel over the access roads only once per week.
Infiltration Systems	Bioretention basins and swales are included in the site plan.

Terracon should be notified if any of the above information is inconsistent with the planned construction, especially the grading limits, as modifications to our recommendations may be necessary.

Site Conditions

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly available geologic and topographic maps.

Item	Description
Parcel Information	The project is located at 530 and 680 E. Edna Place, Covina, California. The project site encompasses a total area of approximately 3.42 acres. The coordinates of the approximate center of the sites are (Western Parcel) 530 E. Edna Place: 34.0925°N, 117.8803°W (Eastern Parcel) 680 E. Edna Place: 34.0925°N, 117.8775°W
Existing Improvements	Based on our site visits and review of available aerial photographs, existing structures on the western parcel include two commercial warehouses with associated commercial parking and drive areas. The eastern parcel is yard parking and driveway. Adjacent and east of the western parcel is an existing SCE substation.
Current Ground Cover	The commercial parking and drive areas and yard parking and drive areas are covered with asphalt.
Existing Topography	The western parcel is generally flat with south to north elevations ranging from 594 to 597 feet. The eastern parcel is generally flat with south to north elevations ranging from 598 to 604 feet.

Geotechnical Characterization

Subsurface Conditions

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** and the GeoModel can be found in the **Figures** attachment of this report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	Consistency/Density
--	**Surface Cover**	Asphalt Concrete (AC) pavement 2½ to 3 inches thick
1	**Upper Soils**	Low bearing capacity soils within the upper 10 feet consisting of very loose to loose silty sand and medium stiff sandy silt
2	**Lower Soils**	Competent soils consisting of medium dense to very dense sands with varying amounts of silt and gravel, and sandy silt and lean clay, stiff to very stiff.

The geotechnical characterization forms the basis of our geotechnical calculations and evaluation of site preparation and foundation options. As noted in **General Comments**, the characterization is based upon widely spaced exploration points across the site, and variations are likely.

Lab Results

Laboratory tests were conducted on selected soil samples and the test results are presented in the **Exploration Results** section and on the boring logs. Atterberg limit test results indicate that the on-site soils generally have low plasticity. Consolidation tests indicated that the sands encountered between the depths of approximately 2.5 and 7.5 feet bgs have a slight collapse potential when saturated under normal footing loads

of 2,000 psf. Direct shear testing on silty sands encountered between 2.5 and 5 feet indicate soils have an effective friction angle of approximately 23 to 30 degrees with apparent cohesion value of 240 to 510 psf. Maximum density/optimum moisture content testing conducted in accordance with ASTM 698 (Proctor) and ASTM D1557 (Modified Proctor) indicate that near surface soils tested have maximum dry densities ranging from 115.0 to 125.1 pounds per cubic feet (pcf) and optimum water contents ranging from 9.7 to 11.1 percent.

Groundwater

Groundwater was not encountered in our exploratory borings to the maximum depth of 51½ feet. According to data collected from the Los Angeles County Public Works Water Data Library for the State of California from a nearby well 3111A, located approximately 0.9 miles southwest of the site, historic groundwater elevation was recorded at depths greater than 200 feet below ground surface between June of 1973 and May of 2015.[1]

Groundwater level fluctuations occur due to seasonal variations in the amount of rainfall, runoff and other factors not evident at the time the borings were performed. Therefore, groundwater levels during construction or at other times in the life of the structure may be higher or lower than the levels indicated on the boring logs. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project.

Seismic Site Class

Based on the soil properties encountered at the site and as described on the exploration logs and results, it is our opinion that the Seismic Site Class is D. The 2022 California Building Code (CBC) Seismic Design Parameters have been generated using the ASCE 7 Hazard Tool. This web-based software application calculates seismic design parameters in accordance with ASCE 7-16 and 2022 CBC. The 2022 CBC requires that a site-specific ground motion study be performed in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped S_s value greater than or equal 0.2.

An exception to this requirement is included in Supplement 3 to ASCE 7 that states: "A ground motion hazard analysis is not required where the value of the parameter S_{M1} determined by Eq. (11.4-2) is increased by 50% for all applications of S_{M1} in this standard.

[1] Los Angeles Public Works. https://dpw.lacounty.gov/general/wells/#

The resulting value of the parameter S_{D1} determined by Eq. (11.4-4) shall be used for all applications of S_{D1} in the Standard."

Based on this exception, the spectral response accelerations presented in the following table were calculated using the site coefficients (F_a and F_v) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2022 CBC.

Eastern Parcel Seismic Parameters	Value
2022 California Building Code Site Classification (CBC)[1]	D[2]
Site Latitude (°N)	34.0925
Site Longitude (°W)	117.8775
S_s Spectral Acceleration for a 0.2-Second Period	1.653
S_1 Spectral Acceleration for a 1-Second Period	0.612
F_a Site Coefficient for a 0.2-Second Period	1.0
F_v Site Coefficient for a 1-Second Period	1.7
Western Parcel Seismic Parameters	**Value**
2022 California Building Code Site Classification (CBC)[1]	D[2]
Site Latitude (°N)	34.0925
Site Longitude (°W)	117.8803
S_s Spectral Acceleration for a 0.2-Second Period	1.652
S_1 Spectral Acceleration for a 1-Second Period	0.612
F_a Site Coefficient for a 0.2-Second Period	1.0
F_v Site Coefficient for a 1-Second Period	1.7

1. Seismic site classification in general accordance with the *2022 California Building Code*.
2. The 2022 California Building Code (CBC) requires a site soil profile determination extending to a depth of 100 feet for seismic site classification. The current scope does not include the 100-foot soil profile determination. Borings were extended to a maximum depth of 51½ feet, and this seismic site class definition considers that similar or denser soils continue below the maximum depth of the subsurface exploration. Additional exploration to deeper depths would be required to confirm the conditions below the current depth of exploration.

Typically, a site-specific ground motion study may generate less conservative coefficients and acceleration values which may reduce construction costs. We recommend consulting with a structural engineer to evaluate the need for such study and its potential impact on construction costs. Terracon should be contacted if a site-specific ground motion study is desired

Faulting and Estimated Ground Motions

The site is located in southern California, which is a seismically active area. The type and magnitude of seismic hazards affecting the site are dependent on the distance to causative faults, the intensity, and the magnitude of the seismic event. As calculated using the USGS Unified Hazard Tool, the following faults are considered to have the most significant effects at the site from a design standpoint:

Fault Name	Magnitude	Distance miles (km)
Sierra Madre	7.66	4.5 (7.3)
San Jose	6.95	3.0 (4.8)
Puente Hills (Coyote Hills)	7.26	7.5 (12.0)
San Andreas (Mojave)	8.04	22.3 (35.9)
Richfield	6.25	8.7 (14.1)
Whittier alt 2	7.38	9.8 (15.7)
Raymond	7.14	8.3 (13.3)
Chino alt 2	6.80	8.5 (13.6)

Based on the USGS Design Maps Summary Report, using the American Society of Civil Engineers (ASCE 7-16) standard, the design peak ground acceleration (PGA_M) for the eastern project site is 0.771g. Based on the USGS Unified Hazard Tool, the project site seismicity for the 2% chance of exceedance in 50 years (return period of 2475 years) hazard is defined by a mean magnitude of 6.97.

Based on the USGS Design Maps Summary Report, using the American Society of Civil Engineers (ASCE 7-16) standard, the design peak ground acceleration (PGA_M) for the western project site is 0.77g. Based on the USGS Unified Hazard Tool, the project site seismicity for the 2% chance of exceedance in 50 years (return period of 2475 years) hazard is defined by a mean magnitude of 6.94.

The site is not located within an Alquist-Priolo Earthquake Fault Zone based on our review of the State Fault Hazard Maps.[2]

Liquefaction

Liquefaction is a mode of ground failure that results from the generation of high pore water pressures during earthquake ground shaking, causing loss of shear strength. Liquefaction is typically a hazard where loose sandy soils exist below groundwater. The California Geological Survey (CGS) has designated certain areas as potential liquefaction hazard zones. These are areas considered at a risk of liquefaction-related ground failure during a seismic event, based upon mapped surficial deposits and the presence of a relatively shallow water table.

The project site has not been mapped by CGS as being located within a liquefaction hazard zone. Groundwater was not encountered in our exploratory borings, and depth to groundwater has historically been greater than 200 feet. Based upon the depth to groundwater and soil properties encountered, we consider the risk of liquefaction settlement to be low.

Corrosivity

The results of laboratory sulfides, soluble sulfate, chlorides, electrical resistivity, redox potential, total salts, and pH testing are presented in our appendix within the **Exploration Results** section. The values may be used to estimate potential corrosive characteristics of the on-site soils with respect to contact with the various underground materials which will be used for project construction.

Results of soluble sulfate testing indicate the sample of the on-site soils tested possessed negligible sulfate concentrations when classified in accordance with Table 19.3.1.1 of the ACI Design Manual. Concrete should be designed in accordance with the exposure class S0 provisions of the ACI Design Manual, Section 318, Chapter 19.

For protection against corrosion to buried metals, Terracon recommends that an experienced corrosion engineer be consulted to evaluate the need for further measures and to design a suitable corrosion protection system for underground metal structures or components. If corrosion of buried metal is critical, it should be protected using a non-

[2] California Geological Survey. https://maps.conservation.ca.gov/cgs/informationwarehouse.

corrosive backfill, wrapping, coating, sacrificial anodes, or a combination of these methods, as designed by a qualified corrosion engineer.

Electrical Resistivity Testing

Terracon performed field measurements of soil electrical resistivity for the support of grounding design. Soil resistivity data was obtained from two test arrays at two locations in the proposed project site. The approximate locations of the tests are shown in the **Exploration Plan**. The testing was performed in general accordance with Wenner Array (4-pin) method per ASTM G57. This method was performed in with IEEE Standard 81, IEEE Guide for Measuring Earth Resistivity, Ground Impedance and Earth Surface Potentials of a Ground System. The test in the proposed locations included perpendicular arrays, North-South and East-West, with "a" spacings 2, 4, 6, 8, 12, 20, 30, 50, and 70 feet. The North-South spacings reached a maximum length of 70 feet while the East-West spacings reached a maximum length of 20 and 70 feet, for the substation and BESS tests, respectively. Spacings up to 80 feet were proposed for the substation and BESS areas. However, these spacings were omitted due to site constraints including the site's length and allowable access area. The "a" spacing is generally considered to be the depth of influence of the test. The electrical resistivity test results are presented in **Exploration Results**.

Thermal Resistivity Testing

Terracon subcontracted Geotherm USA to perform laboratory thermal resistivity testing. Testing was conducted on two (2) bulk samples at the project site from a depth of 1 to 5 feet bgs within the proposed BESS and substation area each. The tests were conducted on soil samples remolded to 90% (as determined by ASTM D1557) of the material's maximum dry density for a total of two tests. Dry out curves targeted the higher of either the in-situ moisture content of the optimum moisture content as determined by ASTM D1557, totally dry condition, and two intermediate points.

In accordance with our scope of work, bulk samples were shipped to Geotherm to perform thermal resistivity testing. The results of testing have not been completed at the time of preparation of this report and will be provided in the final report.

Stormwater Management

Two shallow in-situ infiltration tests (falling head borehole permeability) were performed at approximate depths of 5 and 10 feet bgs within boreholes drilled with an 8-inch diameter auger. The objective of the testing is to provide infiltration rates of in situ soils for designing the proposed infiltration system. A 2-inch thick, ¾-inch gravel layer was placed in the bottom of each boring after the borings were drilled to investigate the soil

profile. A three-inch diameter perforated pipe was installed on top of the gravel layer and gravel was used to backfill between the perforated pipes and the boring sidewall. The borings were then filled with water for a pre-soak period.

At the beginning of each test, the pipes were refilled with water and readings were taken at periodic time intervals as the water level dropped. The soil at the percolation test locations was classified in the field using a visual/manual procedure. The infiltration velocity is presented as the infiltration rate and is summarized in the following table. The infiltration rates provided do not include safety factors.

Test Location	Boring Depth (ft.)[1]	Test Depth Range (ft.)[1]	Soil Type	Percolation Rate Average (in./hr.)	Infiltration Rate Average (in./hr.)[2]
P-1	5	0 to 5	SM	88.0	8.4
P-2	10	5 to 10	SP-SM	96.0	9.6
P-3	5	0 to 5	SM	84.0	7.8
P-4	5	0 to 5	SM	42.3	3.4
P-5	10	5 to 10	ML	43.3	3.3

1. Below existing ground surface.
2. If proposed infiltration system will mainly rely on vertical downward seepage, the correlated infiltration rates should be used. Correlation was based on the County of Los Angeles method.

The subsurface materials encountered in our borings are characterized by clayey soils within the upper 5 to 10 feet, underlain by interbedded layers of silty and clayey sand with lower fines content. It is our opinion that that the infiltration test conducted at boring P-2 was draining into these highly permeable soils with low fine grained soil content, accounting for the higher measured infiltration rate. If the proposed infiltration system will be designed using these higher rates, it should be accounted for in the system's designed depth to reach these highly permeable soils.

The field test results are not intended to be design rates. They represent the result of our tests, at the depths and locations indicated, as described above. The design rate should be determined by the designer by applying an appropriate factor of safety. Based on the County of Los Angeles Department of Public Works GS200.1 document, the following reduction factors are recommended:

LA County Reduction Factor	Value
RF_t	2
RF_v	1
RF_s	2[1]
RF, Total Reduction Factor $RF=RF_t + RF_v + RF_s$	5

1. This factor 1 may be used if stormwater will be clear and filtered of silts and sediments prior to infiltration. We recommend the designer confirm this Reduction Factor

Infiltration rates can be affected by silt buildup, debris, degree of soil saturation, site variability and other factors. The rate obtained at specific location and depth is representative of the location and depth tested and may not be representative of the entire site. Application of an appropriate safety factor is prudent to account for subsoil inconsistencies, possible compaction related to site grading, and potential silting of the percolating soils, depending on the application.

With time, the bottoms of infiltration systems tend to plug with organics, sediments, and other debris. Long term maintenance will likely be required to remove these deleterious materials to help reduce decreases in actual percolation rates.

The design engineer should also check with the local agency for the limitation of the infiltration rate allowed in the design. If the maximum allowable design infiltration rate is lower than the above recommended rate, the maximum allowable design infiltration rate should be used. The designer of the basins should also consider other possible site variability in the design.

The percolation tests were performed with clear water, whereas the storm water will likely not be clear, but may contain organics, fines, and grease/oil. The presence of these deleterious materials will tend to decrease the rate that water percolates from the infiltration systems. Design of the storm water infiltration systems should account for the presence of these materials and should incorporate structures/devices to remove these deleterious materials.

Based on the soils encountered in our borings, we expect the percolation rates of the soils could be different than measured in the field due to variations in fines and gravel content. The design elevation and size of the proposed infiltration system should account for this expected variability in infiltration rates.

Infiltration testing should be performed after construction of the infiltration system to verify the design infiltration rates. It should be noted that siltation and vegetation growth along with other factors may affect the infiltration rates of the infiltration areas. The actual infiltration rate may vary from the values reported here. Infiltration systems should be located at least 10 feet from any existing or proposed foundation system.

Geotechnical Overview

The site appears suitable for the proposed construction based upon geotechnical conditions encountered in the test borings, provided that the recommendations provided in this report are implemented in the design and construction phases of this project.

We anticipate that the proposed BESS structures will be supported on short driven steel piles. Substation pads will be supported by a shallow foundation system bearing on engineered fill, or mat foundations and other appurtenant electrical equipment will be supported on drilled shaft foundations.

Based on the findings summarized in this report, it is our professional opinion that the proposed construction will not be subjected to a hazard from settlement, slippage, or landslide, provided the recommendations of our report are incorporated into the proposed construction. It is also our opinion that the proposed construction will not adversely affect the geologic stability of the site or adjacent properties provided the recommendations contained in our report are incorporated into the proposed construction.

Geotechnical engineering recommendations for foundation systems and other earth connected phases of the project are outlined below. The recommendations contained in this report are based upon the results of field and laboratory testing (presented in the **Exploration Results**), engineering analyses, and our current understanding of the proposed project. The **General Comments** section provides an understanding of the report limitations.

Earthwork

The following presents recommendations for site preparation, excavation, subgrade preparation, and placement of engineered fills on the project. The recommendations presented for the design and construction of foundations are contingent upon following the recommendations outlined in this section.

Earthwork on the project should be observed and evaluated by Terracon. The evaluation of earthwork should include observation and testing of engineered fill, subgrade

preparation, foundation of bearing soils, and other geotechnical conditions exposed during construction of the project.

An on-site, pre-job meeting with the owner, the contractor and the Geotechnical Engineer should occur prior to all grading-related operations. Observation, testing, documentation, and reporting of the grading operation should be performed by the Geotechnical Engineer of Record. A final compaction report should be issued by the Geotechnical Engineer of Record at the completion of the grading operation. Interim reports may be issued according to project requirements. Operations undertaken at the site without the Geotechnical Engineer present may result in exclusions of affected areas from compaction reports for the project.

Grading of the subject site should be performed, at a minimum, in accordance with these recommendations and with applicable portions of the current version of CBC. The following recommendations are presented for your assistance in establishing proper grading criteria.

Site Preparation

Prior to placing fill, existing pavement, debris, and other deleterious materials should be removed from proposed foundation and roadway areas. Exposed surfaces within these areas should be free of mounds and depressions which could prevent uniform compaction. The site should be initially graded to create a relatively level surface to receive fill and provide for a relatively uniform thickness of fill beneath proposed structures.

Demolition of the existing buildings should include complete removal of all foundation systems and remaining underground utilities within the proposed construction area. This should include removal of any loose backfill found adjacent to existing foundations. All materials derived from the demolition of existing structures and pavements should be removed from the site and not be allowed for use as on-site fill, unless processed in accordance with the fill requirements included in this report.

In the event the contractor desires to crush on-site pavements and concrete and use these materials as engineered fill, the crushed materials should be evaluated and tested for compliance with the requirements and specifications of the State of California Department of Transportation, or other approved local governing specifications.

Although no evidence of fills or underground facilities such as septic tanks, cesspools, or basements was observed during the site reconnaissance, such features could be encountered during construction. If unexpected fills, utilities, or underground facilities are encountered, such features should be removed, and the excavation thoroughly cleaned prior to backfill placement and/or construction.

Subgrade Preparation

Due to the anticipated disturbance of near surface soils during the demolition of existing structures and grading, shallow foundations bearing on engineered fill are recommended for support of the proposed BESS/substation equipment pads.

Engineered fill should extend to a minimum depth of 2 feet below the bottom of foundations, to the depth of disturbed zone associated with demolition of the existing building, or 4 feet below existing grades, whichever is greater. Grading for the proposed BESS/substation should incorporate the limits of the overexcavation plus a lateral distance of 2 feet beyond the outside edge of perimeter footings. Beyond site preparation and removal of disturbed soils associated with the demolition of the existing building, overexcavation and replacement is not required for support of drilled shaft foundations or driven piles.

Subgrade soils beneath proposed exterior slabs and gravel access roads should be scarified to a minimum depth of 10 inches, moisture conditioned, and compacted. The moisture content and compaction of subgrade soils should be maintained until slab or pavement construction.

All exposed areas which will receive fill, once properly cleared and benched where necessary, should be scarified to a minimum depth of 10 inches, moisture conditioned as necessary, and compacted per the compaction requirements in this report. Compacted structural fill soils should then be placed to the proposed design grade and the moisture content and compaction of subgrade soils should be maintained until foundation or pavement construction.

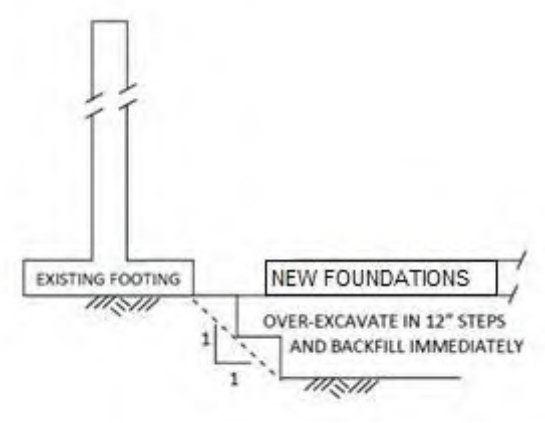
Based upon the subsurface conditions determined from the geotechnical exploration, subgrade soils exposed during construction are anticipated to be relatively workable; however, the workability of the subgrade may be affected by precipitation, repetitive construction traffic or other factors. If unworkable conditions develop, workability may be improved by scarifying and drying.

Excavation

We anticipate that excavations for the proposed construction can be accomplished with conventional earthmoving equipment.

The bottom of excavations should be thoroughly cleaned of loose soils and disturbed materials prior to backfill placement and/or construction.

If new foundations are constructed near existing foundations, there is a risk that the bearing material could become undermined and/or overstressed due to overlapping stresses. Provisions should be made during construction to prevent undermining or disturbing the soils supporting the existing foundations. Excavations should not extend below an imaginary 1H:1V inclined plane projecting below the bottom edge of any adjacent existing foundations as shown in the figure to the right.



Maintaining a sufficient clear distance between new and existing foundations will reduce the potential for increased bearing stresses and additional foundation settlement. Connections between the existing building and the new addition should allow for some differential movement. Individual contractors are responsible for designing and constructing stable, temporary excavations. Excavations should be sloped or shored in the interest of safety following local, and federal regulations, including current OSHA excavation and trench safety standards.

Onsite soils consist of cohesionless sandy soils. Such soils have the tendency to cave and slough during excavations. Therefore, formwork may be needed for foundation excavations.

Fill Material and Placement

All fill materials should be inorganic soils free of vegetation, debris, and fragments larger than six inches in size. Pea gravel or other open-graded materials should not be used as fill or backfill without the prior approval of the geotechnical engineer.

Clean on-site soils (Provided they are screened for oversized particles with dimensions larger than 3 inches) or approved imported materials may be used as fill material for the following:

- general site grading
- foundation areas
- interior floor slab areas
- foundation backfill
- gravel access roads
- exterior slab areas

Imported soils for use as fill material within proposed structure areas should conform to low volume change materials as indicated in the following specifications:

Gradation	Percent Finer by Weight (ASTM C 136)
3"	100
No. 4 Sieve	50-100
No. 200 Sieve	40(max)

- Liquid Limit ..... 30 (max)
- Plasticity Index ..... 10 (max)
- Maximum Expansion Index* ..... 20 (max)

*ASTM D4829

The contractor shall notify the Geotechnical Engineer of import sources sufficiently ahead of their use so that the sources can be observed and approved as to the physical characteristic of the import material. For all import material, the contractor shall also submit current verified reports from a recognized analytical laboratory indicating that the import has a "not applicable" (Class S0) potential for sulfate attack based upon current ACI criteria and is "mildly corrosive" to ferrous metal and copper. The reports shall be accompanied by a written statement from the contractor that the laboratory test results are representative of all import material that will be brought to the job.

Engineered fill should be placed and compacted in horizontal lifts, using equipment and procedures that will produce recommended moisture contents and densities throughout the lift. Fill lifts should not exceed 10 inches loose thickness.

Compaction Requirements

Recommended compaction and moisture content criteria for engineered fill materials are as follows:

Material Type and Location	Per the Modified Proctor Test (ASTM D 1557)		
	Minimum Compaction Requirement	Range of Moisture Contents for Compaction Above Optimum	
		Minimum	Maximum
Approved on-site or imported fill soils:			
Beneath shallow foundations:	90%	0%	+4%
Beneath gravel access roads:	95%	0%	+4%

Material Type and Location	Per the Modified Proctor Test (ASTM D 1557)		
	Minimum Compaction Requirement	Range of Moisture Contents for Compaction Above Optimum	
		Minimum	Maximum
Utility trenches[1]:	95%	0%	+4%
Exterior Slabs:	90%	0%	+4%
Miscellaneous backfill:	90%	0%	+4%

1. Upper 12 inches should be compacted to 95% within pavement and structural areas. Low-volume change imported soils should be used in lightly loaded equipment areas.

Utility Trench Backfill

We anticipate that the on-site soils will provide suitable support for underground utilities and piping that may be installed. Any soft and/or unsuitable material encountered at the bottom of excavations should be removed and be replaced with an adequate bedding material.

Trench excavation should not be conducted below a downward 1:1 projection from existing foundations without engineering review of shoring requirements and geotechnical observation during construction.

A non-expansive granular material with a sand equivalent greater than 30 should be used for bedding and shading of utilities, unless allowed or specified otherwise by the utility manufacturer.

On-site materials are considered suitable for backfill of utility and pipe trenches from 1 foot above the top of the pipe to the final ground surface, provided the material is free of organic matter and deleterious substances.

Trench backfill should be mechanically placed and compacted as discussed earlier in this report. Compaction of initial lifts should be accomplished with hand-operated tampers or other lightweight compactors. Where trenches are placed beneath footings, the backfill should satisfy the gradation and expansion index requirements of engineered fill discussed in this report. Flooding or jetting for placement and compaction of backfill is not recommended.

Grading and Drainage

All grades must provide effective drainage away from the proposed structure during and after construction and should be maintained throughout the life of the structure. Water

retained next to the structures result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential foundation movements, cracked slabs and walls, and roof leaks.

Backfill against footings and in utility and sprinkler line trenches should be well compacted and structure of all construction debris to reduce the possibility of moisture infiltration.

We recommend a minimum horizontal setback distance of 10 feet from the perimeter of any structure and the high-water elevation of the nearest storm-water retention basin.

Roof drainage should discharge into splash blocks or extensions when the ground surface beneath such features is not protected by exterior slabs or paving. Sprinkler systems and landscaped irrigation should not be installed within 5 feet of foundation walls.

Exterior Slab Design and Construction

Exterior slabs-on-grade, exterior architectural features, and utilities founded on, or in backfill may experience some movement due to the volume change of the backfill. To reduce the potential for damage caused by movement, we recommend:

- minimizing moisture increases in the backfill;
- controlling moisture-density during placement of backfill;
- using designs which allow vertical movement between the exterior features and adjoining structural elements;
- placing effective control joints on relatively close centers.

Earthwork Construction Considerations

Upon completion of filling and grading, care should be taken to maintain the subgrade water content prior to construction of roadways. Construction traffic over the completed subgrades should be avoided to the extent practical. The site should also be graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over or adjacent to construction areas should be removed. If the subgrade desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted prior to roadway construction.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for construction site safety, or the contractor's activities; such responsibility shall neither be implied nor inferred.

We recommend that the earthwork portion of this project be completed during extended periods of dry weather if possible. If earthwork is completed during the wet season (typically November through April) it may be necessary to take extra precautionary measures to protect subgrade soils. Wet season earthwork operations may require additional mitigative measures beyond that which would be expected during the drier summer and fall months. This could include diversion of surface runoff around exposed soils and draining of ponded water on the site. Once subgrades are established, it may be necessary to protect the exposed subgrade soils from construction traffic.

The individual contractor(s) is responsible for designing and constructing stable, temporary excavations as required to maintain stability of both the excavation sides and bottom. Excavations should be sloped or shored in the interest of safety following local, and federal regulations, including current Occupational Safety and Health Administration (OSHA) excavation and trench safety standards.

Construction Observation and Testing

The geotechnical engineer should be retained during the construction phase of the project to observe earthwork and to perform necessary tests and observations during subgrade preparation, proof-rolling, placement and compaction of controlled compacted fills, backfilling of excavations to the completed subgrade.

The exposed subgrade and each lift of compacted fill should be tested, evaluated, and reworked, as necessary, as recommended by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the building areas and 5,000 square feet in pavement areas. Where not specified by local ordinance, one density and water content test should be performed for every 50 linear feet of compacted utility trench backfill. This testing frequency criteria may be adjusted during construction as specified by the geotechnical engineer of record.

In areas of foundation excavations, the bearing subgrade should be evaluated by the Geotechnical Engineer. If unanticipated conditions are observed, the Geotechnical Engineer should prescribe mitigation options.

In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer's evaluation of subsurface conditions, including assessing variations and associated design changes.

Shallow Foundations

We anticipate that the proposed BESS/substation equipment will be supported on either spread footings, mat foundation or drilled shafts.

Recommendations for foundation for the proposed structures and related structural elements are presented in the following paragraphs.

If the site has been prepared in accordance with the requirements noted in **Earthwork**, the following design parameters are applicable for shallow foundations.

Shallow Foundation Design Recommendations

Item	Description
Foundation System	Spread footings, mat foundation
Maximum Net Allowable Bearing Pressure (for a total static settlement of 1 inch)[1, 2]	3,000 psf 2 to 5 feet wide 1,500 psf up to 10 feet wide 1,000 psf up to 20 feet wide
Maximum Net Allowable Bearing Pressure (for a total static settlement of 2 inch)[1, 2]	4,000 psf 2 to 5 feet wide 6,000 psf up to 10 feet wide 3,000 psf up to 20 feet wide
Required Bearing Stratum [3]	Engineered fill extending to a minimum of 2 feet below the bottom of foundations, or 4 feet below existing grade, or the depth of undocumented fill/disturbed soils associated with demolition of the existing building, whichever is greater.
Design Modulus of Subgrade Reaction, k[3]	175 pounds per square inch per inch (psi/in) The modulus was obtained on estimates obtained from NAVFAC 7.1 design charts. This value is for a small-loaded area (1 sq.ft. or less) such as for forklift wheel loads or point loads and should be adjusted for larger loaded areas.
Modulus Correction Factor[3]	$k_s = \left(B + {}^{1}/_{2B}\right)^2$
Minimum Embedment Below Finished Grade	12 inches
Minimum Dimensions	Square footings and mats: 24 inches Strip footings: 18 inches
Estimated Total Settlement from Structural Loads	About 1 inch

Item	Description
Estimated Differential Settlement	About 1/2 of total settlement over a horizontal distance of 40 feet

1. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. An appropriate factor of safety has been applied. These bearing pressures can be increased by 1/3 for transient loads unless those loads have been factored to account for transient conditions.
2. **Maximum allowable pressure is based on both calculated bearing capacities and allowable settlements**.
3. k values should be reduced to account for dimensional effects of largely loaded areas. Where kc is the corrected or design modulus value and B is the mat width in feet.

Settlement calculations were performed utilizing Westergaard and Hough's methods[3] to estimate the static settlement for various foundations widths with allowable settlements of 1 to 2 inches.

Finished grade is defined as the lowest adjacent grade within five feet of the foundation for perimeter (or exterior) footings.

The allowable foundation bearing pressure applies to dead loads plus design live load conditions. The design bearing pressure may be increased by one-third when considering total loads that include wind or seismic conditions. The weight of foundation concrete below grade may be neglected in dead load computations.

Foundation should be reinforced as necessary to reduce the potential for distress caused by differential foundation movement. Foundation excavations should be observed by the geotechnical engineer. If the soil conditions encountered differ significantly from those presented in this report, supplemental recommendation will be required.

[3] *FHWA Geotechnical Engineering Circular No. 6 – Shallow Foundations, FHWA – SA-02-054*

Lateral Earth Pressures

Design Parameters

For engineered fill comprised of on-site soils or imported low volume change materials above any free water surface, recommended equivalent fluid pressure of unrestrained foundation elements are:

Item	Recommended Value
Active Case	38 psf/ft
Passive Case	400 psf/ft
At-Rest Case	58 psf/ft
Ultimate Coefficient of Sliding Friction	0.39

1. The values are based on engineered fill materials used as backfill.
2. Uniform, horizontal backfill, compacted to at least 90% of the ASTM D 1557 maximum dry density, rendering a maximum
3. Use of passive earth pressures require the sides of the excavation for the foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the foundation forms be removed and compacted engineered fill be placed against the vertical foundation face
4. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Should be neglected for foundations subject to net uplift conditions.
5. Passive pressure and sliding friction may be combined to resist sliding provided that either the passive pressure or frictional resistance (adhesion) is reduced by 50 percent.

The lateral earth pressures herein do not include any factor of safety and are not applicable for submerged soils/hydrostatic loading. Additional recommendations may be necessary if such conditions are to be included in the design.

Fill against foundation walls should be compacted to densities specified in the Earthwork section of this report. Compaction of each lift adjacent to walls should be accomplished with hand-operated tampers of other lightweight compactors.

Deep Foundations

Driven Pile Design Parameters

Proposed battery storage units can be supported on driven steel W-section foundations (assumed to be W6x9 or similar) in general accordance with the following sections.

The design capacity of a single-driven pile is a function of several factors including:

- Size and type of pile;
- Type and capacity of pile installation equipment;
- Pile integrity after installation; and
- Engineering properties of the subsurface soils.

Based on specific conditions encountered on site, the soils are generally considered drivable for pile installation. The most effective means of verifying pile drivability and capacities for either tension or lateral loads is through pile load tests. Pile foundation design parameters have been based upon correlated capacities utilizing soil strength criteria determined from the soil borings and laboratory testing.

The tables below neglect a depth of 1 foot for axial and lateral resistance. This neglect is estimated based on our experience and accounts for depth of scour and/or disturbance from utilities near the piles. Depth of neglect should be verified and adjusted by the design engineer based on the scour analysis. Allowable capacities were based on a minimum factor-of-safety (FOS) of 2.0 for skin friction and 3.0 for end bearing.

Stratigraphy[1]		γ′ (pcf)	Allowable Compression Unit Skin friction (psf)[1]	Allowable Bearing Pressure (psf)[2]
Layer	Depth Below Finished Grade (feet)			
1	1	105	45	2,800
	5			
2	5	105	115	3,500
	10			
3	10	110	220	10,800
	20			

1. Allowable uplift capacity is on the order of 60% of the compression capacity values in the table. The values provided should be multiplied by the box perimeter of the pile times the depth. The box perimeter is considered two times the width of the flange plus two times the depth of the web.
2. The values provided should be multiplied by the box area of the pile and be used for compression resistance only.

Recommended soil parameters for lateral load analysis of driven pile foundations have been developed for use in LPILE computer programs. Engineering properties have been estimated as outlined below:

Description	Top Depth Bottom Depth	Effective Unit Weight (pcf)	L-PILE/ GROUP Soil Type	ϕ (°)
Stratum 1	1	105	Sand	29
	10			

Description	Top Depth Bottom Depth	Effective Unit Weight (pcf)	L-PILE/ GROUP Soil Type	ϕ (°)
Stratum 2	10 20	110	Sand	35

Driven Piles Construction Considerations

Based on the field exploration and laboratory testing, it is our opinion that the soils on the site are suitable for pile installation into native soils.

A geotechnical engineer should be engaged to make periodic observations of pile driving operations during construction. Each pile should be observed and checked for buckling, crimping and alignment in addition to recording penetration resistance, depth of embedment, and general pile driving operations.

As part of the overall quality control program, the time rate of installation (seconds per foot of embedment) should be recorded during production post driving. As a direct extension of the design process, additional "proof" testing should be performed on a representative number of production posts that do not meet the minimum installation rate criteria outlined in this report.

Drilled Shaft Design Recommendations

Proposed substation structures may be supported on drilled shafts. Total required embedment of the drilled shaft should be determined by the structural engineer based on structural loading and parameters provided in this report.

Drilled Shaft Axial Loading

Allowable skin friction and total capacity charts are attached to our **Supporting Information** section at the end of this report. The values presented for allowable side friction and end bearing include a factor of safety of 2.5.

Drilled piers should have a minimum (center-to-center) spacing of three diameters. Closer spacing may require a reduction in axial load capacity. Axial capacity reduction can be determined by comparing the allowable axial capacity determined from the sum of individual piers in a group versus the capacity calculated using the perimeter and base of the pier group acting as a unit. The lesser of the two capacities should be used in design.

The allowable uplift capacities should only be based on 60% of the side friction of the shaft; however, the weight of the foundation should be added to these values to obtain the actual allowable uplift capacities for drilled shafts. Tensile reinforcement should extend to the bottom of shafts subjected to uplift loading.

Drilled Shaft Lateral Loading

Based on our review of the subsurface conditions in the area of the BESS/substation, our laboratory testing, and the Standard Penetration Test (SPT) results, engineering properties have been estimated for the soils conditions as shown in the following table. Due to potential for disturbance within the upper 2 feet should be neglected.

Recommended geotechnical parameters for lateral load analyses by others of drilled shaft foundations have been developed for use in the LPILE computer program. The following table summarizes input values for use in LPILE analyses. LPILE estimated values of k_h and $\varepsilon 50$ may be used. Since deflection or a service limit criterion will most likely control lateral capacity design, no safety/resistance factor is included with the parameters.

Stratigraphy[1]		L-Pile Soil Model	ϕ[2]	Cohesion (psf)	γ' (pcf)[2]
Layer	Depth Below Finished Grade (feet)				
1	2	Sand	29	--	105
	10				
2	10	Sand	35	--	110
	20				
3	20	Stiff Clay w/o Water	--	2,000	110
	30				
4	30	Sand	42	--	115
	40				
5	40	Sand	32	--	115
	50				

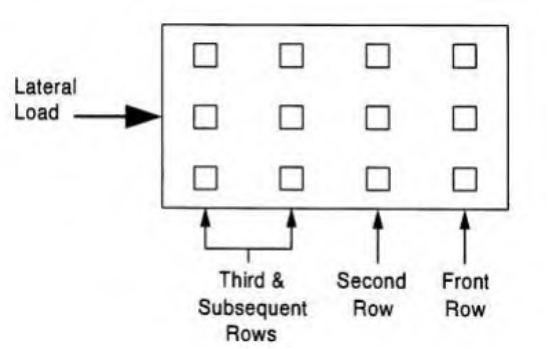
1. See Subsurface Profile in **Geotechnical Characterization** for more details on Stratigraphy.
2. Definition of Terms:
   ϕ: Internal friction angle

Stratigraphy[1]		L-Pile Soil Model	ϕ[2]	Cohesion (psf)	γ′ (pcf)[2]
Layer	Depth Below Finished Grade (feet)				

γ′: Effective unit weight

The load capacities provided herein are based on the stresses induced in the supporting soil strata. The structural capacity of the shafts/piles should be checked to assure they can safely accommodate the combined stresses induced by axial and lateral forces. Lateral deflections of shafts/piles should be evaluated using an appropriate analysis method, and will depend upon the pile's diameter, length, configuration, stiffness and "fixed head" or "free head" condition. We can provide additional analyses and estimates of lateral deflections for specific loading conditions upon request. The load-carrying capacity of shafts/piles may be increased by increasing the diameter and/or length.

When piers are used in groups, the lateral capacities of the piers in the second, third, and subsequent rows of the group should be reduced as compared to the capacity of a single, independent pier. Guidance for applying p-multiplier factors to the p values in the p-y curves for each row of pier foundations within a pier group are as follows:



1. Front row: Pm = 0.8
2. Second row: Pm = 0.4
3. Third and subsequent row: Pm= 0.3

For the case of a single row of piers supporting a laterally loaded grade beam, group action for lateral resistance of piers would need to be considered when spacing is less than five pier diameters (measured center-to-center). However, spacing closer than 3D (where D is the diameter of the pier) is not recommended due to the potential for the installation of a new pier disturbing an adjacent installed pier, likely resulting in axial capacity reduction.

Drilled Shaft Construction Considerations

Drilling to design depths should be possible with conventional single flight power augers. For drilled shaft depths above the depth of groundwater, temporary steel casing will likely be required to properly drill and clean shafts prior to concrete placement. Drilled pier bearing surfaces must be thoroughly cleaned and all loose materials removed from the bottom of the pier excavation prior to concrete placement.

We do not anticipate drilled shafts to extend below the depth of groundwater. However, if foundation concrete cannot be placed in dry conditions, a tremie should be used for concrete placement.

Drilled shaft foundation concrete should be placed immediately after completion of drilling and cleaning. Due to potential sloughing and raveling, foundation concrete quantities may exceed calculated geometric volumes.

In the event drilled hole walls slough during drilling, temporary steel casing may be required to properly drilled shafts prior to concrete placement. We recommend the use of slurry drilling methods with polymers method to keep the solids in suspension during the drilling. Drilled shaft foundation concrete should be placed within 6 inches of the shaft base of the slurry-filled excavation immediately after completion of drilling and cleaning. The tremie should remain inserted several feet into the fresh concrete as it displaces the slurry upward and until placement is complete. The slurry should have a sand content no greater than 1% at the time concrete placement commences. The maximum unit weight of the slurry should be established in consultation with Terracon.

If casing is used for drilled shaft construction, it should be withdrawn in a slow continuous manner maintaining a sufficient head of concrete to prevent infiltration of water or the creation of voids in shaft concrete. Shaft concrete should have a relatively high fluidity when placed in cased shaft holes or through a tremie. Shaft concrete with slump in the range of 6 to 8 inches is recommended.

Foundation concrete should be placed immediately after completion of drilling and cleaning. Closely spaced shafts should be drilled and filled alternatively, allowing the concrete to set at least eight hours before drilling the adjacent shaft. All excavations should be filled with concrete as soon after drilling as possible. In no event should shaft holes be left open overnight.

Formation of mushrooms or enlargements at the tops of shafts should be avoided during shaft drilling. If mushrooms develop at the tops of the shafts during drilling, sono-tubes should be placed at the shaft tops to help isolate the shafts.

Free-fall concrete placement in drilled piers will only be acceptable if provisions are taken to avoid striking the concrete on the sides of the hole or reinforcing steel. The use

of a bottom-dump hopper, or an "elephant's trunk" discharging near the bottom of the hole where concrete segregation will be minimized, is recommended.

We recommend that all drilled shaft installations be observed on a full-time basis by an experienced geotechnical engineer in order to evaluate that the soils encountered are consistent with the recommended design parameters. If the subsurface soil conditions encountered differ significantly from those presented in this report, supplemental recommendations will be required. The Geotechnical Engineer should observe the installation of drilled piers to verify the soil conditions and the diameter and depth of piers. Drilled piers should be constructed true and plumb.

Drilled pier end bearing surfaces must be thoroughly cleaned prior to concrete placement. A representative of the Geotechnical Engineer should inspect the bearing surface and foundation pier configuration. If the subsurface soil conditions encountered differ significantly from those presented in this report, supplemental recommendations will be required.

The contractor should check for gas and/or oxygen deficiency before any workers enter the excavation for observation and manual cleanup. All necessary monitoring and safety precautions as required by OSHA, State or local codes should be strictly enforced.

Gravel-Surfaced Drives and Parking

Subgrade Preparation

On most project sites, the site grading is accomplished relatively early in the construction phase. Fills are typically placed and compacted in a uniform manner. However, as construction proceeds, the subgrade may be disturbed due to utility excavations, construction traffic, desiccation, or rainfall/snow melt. As a result, the aggregate-surfaced roadway or parking area subgrade may not be suitable for construction traffic and corrective action will be required. The subgrade should be carefully evaluated at the time of construction for signs of disturbance or instability. We recommend the subgrade be thoroughly proofrolled with a loaded tandem-axle dump truck prior to final grading. The top 10 inches of the exposed subgrade should be scarified, moisture conditioned, and recompacted to at least 95 percent of the maximum dry unit weight as determined by ASTM D698 before any new fill or aggregate is placed.

Design Recommendations

Design of aggregate-surfaced roadways for the project has been based in general accordance with the "Aggregate-Surfaced Road Design Catalog" subsection of the 1993 AASHTO "Guide for the Design of Pavement Structures" and based on subsurface conditions observed at the site and laboratory test results.

The unpaved road sections for post-construction use have been developed under the following assumptions:

Aggregate Roadway Design Parameters		
Parameter	**Design Value**	**Comments**
Traffic Loading	5,000 ESALs [1]	Assumed
Design Life	30 years	Assumed
Design CBR	12	Tested value of 12
Resilient Modulus	12,500 psi (all-weather)	Based on CBR of 12
Aggregate Base Elastic Modulus	36,000 psi	Assumed
Allowable Rut Depth	2.0 inches	Assumed
Design Serviceability Loss	2.5	Assumed
Vehicle Tire Pressure	80 psi	Assumed

1. ESAL = 18 kips Equivalent Single Axle Load

As a minimum, we recommend the following options for unpaved access roads:

Typical Unpaved Road Section – Post Construction Traffic	
Base Course Thickness (inches)	**Traffic (ESALs)**
5[1, 2]	5,000

1. Minimum section thickness is anticipated to support fire trucks and pick-up trucks associated with on-going maintenance. Trucks containing heavy equipment may require localized repairs.
2. Base materials shall consist of Class II Base meeting requirements of the Caltrans Standard Specifications.

Quality roadway surfacing materials should consist of a blend of gravel, sand, and fines (clay and silt). We believe the maximum size particle should not exceed 1 inch in diameter and the gravel should be crushed with angular edges (not rounded). The blend

of materials should be selected to allow for easy compaction resulting in a firm, low permeable surface promoting surface drainage off the roadway surface. Materials meeting California Department of Transportation (CalTrans) Class II specifications can be used for aggregate surfacing material. Aggregate surfacing material should be placed in lifts not exceeding 6 inches and compacted to a minimum of 95 percent of the maximum dry unit weight as determined by ASTM D1557.

A quality roadway surfacing material should also contain approximately 10 to 25 percent fines (silt and clay-sized particles passing the No. 200 sieve). The fines should exhibit low to moderate plasticity (plastic index less than 15) and will act as a binder to help reduce risk for wash boarding. If the fines content of a roadway surfacing material is comprised mostly of silt, the fines will be non-plastic and the surfacing materials will not have the benefit of the binder or cohesive aspects.

In order to reduce dust, reclaimed asphalt pavement (RAP) may be used as the upper 2 to 4 inches of the aggregate-surfacing. The RAP should be graded to the specified limits for CalTrans Class II aggregate base course but modified to contain 10 to 25 percent fines and properly compacted. Periodic spraying (1 to 2 times a year following maintenance grading) of the surface with magnesium chloride or other dust suppressant may also be considered to reduce dust and wash boarding.

Aggregate-surfaced roadways performance is affected by its surroundings. In addition to providing preventive maintenance, the civil engineer should consider the following recommendations in the design and layout of aggregate-surfaced roadways:

- Site grades should slope a minimum of 10 percent away from the roadways;
- The subgrade and the aggregate-surfaced roadways have a minimum 10 percent slope to promote proper surface drainage;
- Consider appropriate edge drainage; and
- Install pavement drainage in surrounding areas anticipated for frequent wetting.

Maintenance

Periodic maintenance extends the service life of the aggregate-surfaced roadways and parking areas and should include re-grading and replacement of aggregate base course in any deteriorated areas. Thicker aggregate base course sections could be used to reduce the required maintenance and extend the service life of the aggregate-surfaced roadways. Design alternatives which could reduce the risk of subgrade saturation and improve long-term performance include installing surface drains next to any areas where surface water could pond. Properly designed and constructed subsurface drainage will reduce the time subgrade soils are saturated and can also improve subgrade strength and performance

Regardless of the design, un-surfaced roadways will display varying levels of wear and deterioration. We recommend an implementation of a site inspection program at a frequency

of at least once per year to verify the adequacy of the roadways. Preventative measures should be applied as needed for erosion control and re-grading. An initial site inspection should be completed approximately three months following construction.

Preventative maintenance should be planned and provided for through an on-going management program to enhance future roadway performance. Preventative maintenance activities are intended to slow the rate of deterioration, and to preserve the roadway investment.

Surfacing materials should not be placed when the surface is wet. Surface drainage should be provided away from the edge of roadways to reduce lateral moisture transmission into the subgrade.

If rut depths become excessive as construction work progresses, re-grading and re-compaction should be performed as necessary. Care should be taken to reduce or eliminate trafficking of the unpaved access road when the subgrade is wet as this will result in accelerated rutting conditions. Scarification, moisture treatment as necessary, and re-compaction of the roadways will likely be necessary as the roadways deteriorate.

General Comments

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials, or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-

party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly effect excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety and cost estimating including excavation support and dewatering requirements/design are the responsibility of others. Construction and site development have the potential to affect adjacent properties. Such impacts can include damages due to vibration, modification of groundwater/surface water flow during construction, foundation movement due to undermining or subsidence from excavation, as well as noise or air quality concerns. Evaluation of these items on nearby properties are commonly associated with contractor means and methods and are not addressed in this report. The owner and contractor should consider a preconstruction/precondition survey of surrounding development. If changes in the nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

GeoModel

This is not a cross section. This is intended to display the Geotechnical Model only. See individual logs for more detailed conditions.

Model Layer	Layer Name	General Description
1	Upper Soils	Low bearing capacity soils within the upper 10 feet consisting of very loose to loose silty sand and medium stiff sandy silt
2	Lower Soils	Competent soils consisting of medium dense to very dense sands with varying amounts of silt and gravel, and sandy silt and lean clay, stiff to very stiff.

Legend

- Asphalt
- Poorly-graded Sand with Silt
- Sandy Lean Clay
- Silty Sand
- Sandy Silt

NOTES:
Layering shown on this figure has been developed by the geotechnical engineer for purposes of modeling the subsurface conditions as required for the subsequent geotechnical engineering for this project.
Numbers adjacent to soil column indicate depth below ground surface.

Exploration and Testing Procedures

Field Exploration

Number of Borings	Approximate Boring Depth (feet)	Location
5	26.5 or auger refusal	Proposed BESS Area
1	51.5 or auger refusal	Proposed Substation Area
5	5 to 10 feet	Infiltration Area

Boring Layout and Elevations: Terracon personnel provided the boring layout using handheld GPS equipment (estimated horizontal accuracy of about ±10 feet) and referencing existing site features. Approximate ground surface elevations were estimated using Google Earth. If elevations and a more precise boring layout are desired, we recommend borings be surveyed.

Subsurface Exploration Procedures: We advanced the borings with a truck-mounted drill rig using continuous hollow stem flight. Four samples were obtained in the upper 10 feet of each boring and at intervals of 5 feet thereafter. Test samples were collected during drilling in general accordance with the appropriate ASTM methods using Standard Penetration Testing (SPT) and sampling using either standard split-spoon or Modified California samplers. A sampling spoon was driven into the ground by a 140 pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the last 12 inches of a normal 18 inch penetration was recorded as the Standard Penetration Test (SPT) resistance value, also referred to as N-values. The N-values are indicated on the boring logs at the test depths. The samples were placed in appropriate containers, taken to our soil laboratory for testing, and classified by a geotechnical engineer.

For safety purposes, all borings were backfilled with auger cuttings after their completion.

We also observed the boreholes while drilling and at the completion of drilling for the presence of groundwater. Groundwater was encountered in borings B-1, B-3, B-5 and B-6.

The sampling depths, penetration distances, and other sampling information was recorded on the field boring logs. The samples were placed in appropriate containers and taken to our soil laboratory for testing and classification by a Geotechnical Engineer. Our exploration team prepared field boring logs as part of the drilling operations. These field logs included visual classifications of the materials observed during drilling and our interpretation of the subsurface conditions between samples. Final boring logs were

prepared from the field logs. The final boring logs represent the Geotechnical Engineer's interpretation of the field logs and include modifications based on observations and tests of the samples in our laboratory.

Electrical Resistivity Testing: Soil electrical resistivity data was be obtained in accordance with ASTM G57 Standard Test Method for Field Measurement of Soil Resistivity Using the Wenner Four-Electrode Method. At the test location, two near perpendicular lines was tested. Electrode "a" spacings are summarized in the following table. Electrode spacing was adjusted to conform to site conditions.

No. of Test Locations	Electrode "a" Spacing (feet) [1]	Planned Location
2	2, 4, 6, 8, 12, 20, 30, 50, 70	Proposed BESS and Substation Areas

Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests. The laboratory testing program included the following types of tests:

- Moisture Content
- Dry Unit Weight
- Atterberg Limits
- Compaction
- Swell Consolidation Test
- Direct Shear
- Corrosivity
- Thermal Resistivity

The laboratory testing program often included examination of soil samples by an engineer. Based on the results of our field and laboratory programs, we described and classified the soil samples in accordance with the Unified Soil Classification System.

FIELD ELECTRICAL RESISTIVITY TEST DATA
Covina BESS and substation Project | Covina, California
Terracon Project No. LA245153

Array Loc.	ER - BESS		
Instrument	Terrameter	**Weather**	Cloudy
Serial #	LS2617460002	**Ground Cond.**	Asphalt
Calib. Due	February 16, 2025	**Tested By**	DM/AC
Test Date	September 14, 2024	**Method**	Wenner 4-pin (ASTM G57-06 (2012); IEEE 81-2012)
Notes & Conflicts	Electrode depths have increased to achieve more coductivity in order to obtain higher quality data. Site limitation on both arrays due to walls and RVs.		

Apparent resistivity ρ is calculated as : $\rho = \dfrac{4\pi aR}{1 + \dfrac{2a}{\sqrt{a^2+4b^2}} - \dfrac{a}{\sqrt{a^2+b^2}}}$

Electrode Spacing *a*		Electrode Depth *b*		N-S Test		E-W Test

General Notes

Sampling	Water Level	Field Tests
	 Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.	N Standard Penetration Test Resistance (Blows/Ft.) (HP) Hand Penetrometer (T) Torvane (DCP) Dynamic Cone Penetrometer UC Unconfined Compressive Strength (PID) Photo-Ionization Detector (OVA) Organic Vapor Analyzer

Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

Strength Terms

Relative Density of Coarse-Grained Soils
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

Relative Density	Standard Penetration or N-Value (Blows/Ft.)	Ring Sampler (Blows/Ft.)
Very Loose	0 - 3	0 - 6
Loose	4 - 9	7 - 18
Medium Dense	10 - 29	19 - 58
Dense	30 - 50	59 - 98
Very Dense	> 50	> 99

Consistency of Fine-Grained Soils
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

Consistency	Unconfined Compressive Strength Qu (tsf)	Standard Penetration or N-Value (Blows/Ft.)	Ring Sampler (Blows/Ft.)
Very Soft	less than 0.25	0 - 1	< 3
Soft	0.25 to 0.50	2 - 4	3 - 4
Medium Stiff	0.50 to 1.00	4 - 8	5 - 9
Stiff	1.00 to 2.00	8 - 15	10 - 18
Very Stiff	2.00 to 4.00	15 - 30	19 - 42
Hard	> 4.00	> 30	> 42

Relevance of Exploration and Laboratory Test Results

Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

Unified Soil Classification System

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]				Soil Classification	
				Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	Cu≥4 and 1≤Cc≤3 [E]	GW	Well-graded gravel [F]
			Cu<4 and/or [Cc<1 or Cc>3.0] [E]	GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH	GM	Silty gravel [F, G, H]
			Fines classify as CL or CH	GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	Cu≥6 and 1≤Cc≤3 [E]	SW	Well-graded sand [I]
			Cu<6 and/or [Cc<1 or Cc>3.0] [E]	SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH	SM	Silty sand [G, H, I]
			Fines classify as CL or CH	SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots above "A" line [J]	CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]	ML	Silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OL	Organic clay [K, L, M, N]
					Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line	CH	Fat clay [K, L, M]
			PI plots below "A" line	MH	Elastic silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OH	Organic clay [K, L, M, P]
					Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $\quad Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.

APN(s): 8429-008-028, 8429-008-029, 8429-007-005, 8429-007-006, 8429-007-007

Low Impact Development (LID) Plan
RWE Covina Reliability

RECORDKEEPING

All records must be made available for review upon request.

RESPONSIBLE PARTY

The owner is aware of the maintenance responsibilities of the proposed BMPs. A funding mechanism is in place to maintain the BMPs at the frequency stated in the LID Plan. The contact information for the entity responsible is below:

Name:	Kimberly Comacho
Company:	RWE Clean Energy
Title:	Manager, Utility-Scale Development
Address 1:	1401 East 6th Street, Austin, TX 78702
Address 2:	
Phone Number:	(619) 643-0578
Email:	Kimberly.comacho@rwe.com

BMP Applicable? Yes/No	BMP Name	BMP Implementation, Maintenance, and Inspection Procedures	Implementation, Maintenance, and Inspection Frequency and Schedule	Person or Entity with Operation & Maintenance Responsibility
Non-Structural Source Control BMPs				
Yes	**Education for Property Owners, Tenants and Occupants**	Education Material included in the attachments below will be provided to Property Owners, Tenants and Occupants when taking possession of property.	Daily	Owner
Yes	**Activity Restriction**	Owner to enforce and provide training of employees of all activity restrictions. The following restrictions apply during operations: Prohibition of fertilizer, pesticide, and animal waste discharge to street or storm drain; prohibition of other waste/debris, including landscape litter (e.g. grass clippings, shrub leaf litter) to street or storm drain; prohibition of equipment/vehicle wash and outdoor vehicle maintenance/repair.	Daily	Owner
Yes	**Common Area Landscape Management**	Applicable to all common area landscape. Owner to coordinate with staff to employ landscaping practices consistent with CASQA BMP SC-41. Maintain erosion control measures and follow pesticide application procedures. Inspection of irrigation system to take place weekly to ensure that the right amount of watering is occurring. Properly timed fertilizing, mowing, weeding, pest control, and pruning to be conducted on a weekly basis to preserve landscape water efficiency.	Weekly	Owner

BMP Applicable? Yes/No	BMP Name	BMP Implementation, Maintenance, and Inspection Procedures	Implementation, Maintenance, and Inspection Frequency and Schedule	Person or Entity with Operation & Maintenance Responsibility
Yes	**Common Area Litter Control**	Site to be inspected for visible debris and debris will be swept and removed in a timely fashion. Wash water, sweepings and sediments will be disposed of properly.	Daily	Owner
No	**Housekeeping of Loading Docks**			
No	**Common Area Catch Basin Inspection**			
Yes	**Street Sweeping Private Streets and Parking Lots**	Vacuum sweeping of streets and driveways utilizing a vacuum assisted sweeper.	Quarterly and at the beginning of rainy season (Oct-May)	Owner
Structural Source Control BMPs				
Yes	**Provide Storm Drain System Stenciling and Signage**	Storm Drain Stenciling/Signage of "No Dumping Drains to Ocean" to be provided by the developer and maintained for onsite private storm drains and/or along drainage structures such as bioretention ponds. Annual maintenance needed to ensure legibility. This will prohibit and discourage illegal dumping at public access points.	Annually during rainy season (Oct-May) and before and after each storm event	Owner
No	**Design and Construct Outdoor Material Storage Areas to Reduce Pollutant Introduction**			
No	**Design and Construct Trash and Waste Storage Areas to Reduce Pollutant Introduction**			

Low Impact Development (LID) Plan

RWE COVINA RELIABILITY

BMP Applicable? Yes/No	BMP Name	BMP Implementation, Maintenance, and Inspection Procedures	Implementation, Maintenance, and Inspection Frequency and Schedule	Person or Entity with Operation & Maintenance Responsibility
Yes	**Use Efficient Irrigation Systems & Landscape Design**	Install and maintain efficient irrigation systems that contain rain-triggered shutoff devices. Inspection of system will be conducted to ensure irrigation system is functioning properly and all plant materials show growth. Repair leaks in irrigation system when observed. Irrigation system to be replaced/repaired if existing vegetation shows decline.	Weekly	Owner
Yes	**Protect Slopes and Channels and Provide Energy Dissipation**	Provided temporary and permanent stabilization of above-ground basin slopes as quickly as possible and ensure that runoff increases do not erode basin. Provide energy dissipation for stormwater flow entering above-ground basin. Inspections to ensure sufficient stabilization of energy dissipation devices and vegetated basin slopes.	Quarterly and at the beginning of rainy season (Oct-May)	Owner
No	**Loading Docks**			
No	**Maintenance Bays**			
No	**Vehicle Wash Areas/Racks**			
No	**Outdoor Processing Areas**			
No	**Equipment Wash Areas**			
No	**Fueling Areas**			
No	**Hillside Landscaping**			

Low Impact Development (LID) Plan

RWE COVINA RELIABILITY

BMP Applicable? Yes/No	BMP Name	BMP Implementation, Maintenance, and Inspection Procedures	Implementation, Maintenance, and Inspection Frequency and Schedule	Person or Entity with Operation & Maintenance Responsibility
Treatment Control BMPs				
LID BMPs				
Yes	**Above-Ground Bioretention Ponds**	Visual inspection for trash levels and/or obstructions affecting basin infiltration surface. Visually inspect basin slopes and energy dissipation structure for functionality and to ensure that noticeable basin erosion has not occurred. Remove debris from the basin surface if necessary.	Semiannually and after end of wet season (Oct-May).	Owner
Hydromodification Control BMPs				

ATTACHMENT E: PLANS

CIVIL IMPROVEMENT PLANS

FOR

COVINA RELIABILITY PROJECT

LOCATED AT

530± & 680± E. EDNA PLACE, COVINA, CA 91723

PROJECT INFORMATION

PROJECT NAME:	RWE COVINA RELIABILITY
SITE ADDRESS:	530± & 680± E. EDNA PLACE, COVINA, CA 91723
TOTAL PROJECT AREA:	1.34± & 2.07± ACRES, RESPECTIVELY
PROPOSED USE:	BESS SITE
ZONE DISTRICT:	M-1 - LIGHT MANUFACTURING ZONE

SCOPE OF WORK

THE SCOPE OF WORK SHALL CONSIST OF DEMOLITION OF EXISTING SITE AND/OR BUILDINGS AND CONSTRUCTION OF A BESS FACILITY INCLUDING GRADING, DRAINAGE, UTILITIES, AND WATER QUALITY IMPROVEMENTS.

GEOTECHNICAL REPORT

TITLE: COVINA BESS AND SUBSTATION GEOTECHNICAL ENGINEERING REPORT
DATED: OCTOBER 23, 2024
PREPARED BY: TERRACON CONSULTANTS, INC.

ESTIMATED RAW EARTHWORK QUANTITIES

CUT:	1,150 CY
FILL:	150 CY
NET:	1,000 CY (CUT)*

NOTE: THE ABOVE QUANTITIES ARE APPROXIMATE IN PLACE VOLUMES CALCULATED FROM THE EXISTING GROUND TO THE PROPOSED FINISHED GRADE. EXISTING GROUND IS DEFINED BY THE CONTOURS AND SPOT GRADES ON THE BASE SURVEY. PROPOSED FINISHED GRADE IS DEFINED AS THE FINAL GRADE AS INDICATED ON THE GRADING PLAN(S).

THE EARTHWORK QUANTITIES ABOVE ARE FOR PERMIT PURPOSES ONLY. THEY HAVE NOT BEEN FACTORED TO ACCOUNT FOR CHANGES IN VOLUME DUE TO BULKING, CLEARING AND GRUBBING, SHRINKAGE, OVER- EXCAVATION AND RE-COMPACTION, AND CONSTRUCTION METHODS. NOR DO THEY ACCOUNT FOR THE THICKNESS OF PAVEMENT SECTIONS, FOOTINGS, SLABS, REUSE OF PULVERIZED MATERIALS THAT WILL UNDERLIE NEW PAVEMENTS, ETC. THE CONTRACTOR SHALL RELY ON THEIR OWN EARTHWORK ESTIMATES FOR BIDDING PURPOSES.

FEMA FLOOD NOTE

FEMA MAP 06037C1700F SHOWS THE SUBJECT PROPERTY IS LOCATED WITHIN ZONE 'X'.

GENERAL DEMOLITION NOTES:

1. THE CONTRACTOR SHALL CLEAR THE PROJECT SITE AREA WITHIN THE CONFINES OF THE CIVIL LIMIT OF WORK LINE. THE CONTRACTOR SHALL CAP IN PLACE ALL EXISTING UTILITIES AT THE CIVIL LIMIT OF WORK LINE, UNLESS OTHERWISE NOTED ON THE PLAN. THE CONTRACTOR SHALL DEMOLISH AND REMOVE FROM THE CIVIL LIMIT OF WORK LINE ALL EXISTING UTILITY STRUCTURES, PLANTERS, TREES, AND ALL OTHER SITE FEATURES, UNLESS OTHERWISE NOTED ON THE PLAN.

2. ALL EXISTING VEGETATION WITHIN THE CIVIL LIMIT OF WORK LINE SHALL BE REMOVED AS FOLLOWS:

   A. ALL EXISTING TREES SHALL BE REMOVED, INCLUDING ROOTS.
   B. ALL EXISTING SHRUBS SHALL BE CUT FLUSH WITH THE GROUND, EXCEPT IN AREAS WHERE ROOT STRUCTURES WILL INTERFERE WITH INSTALLATION OF STRUCTURAL FOUNDATIONS
   C. ALL EXISTING GRASSES SHALL BE MOWED AS SHORT AS POSSIBLE
   D. IN AREAS OF GRADING, ALL VEGETATION SHALL BE CLEARED AND GRUBBED PER THE RECOMMENDATIONS PROVIDED IN THE PROJECT GEOTECHNICAL REPORT

3. DAMAGE TO ANY EXISTING UTILITIES AND SERVICES TO REMAIN SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR. CONTRACTOR SHALL REPAIR AND/OR REPLACE IN KIND.

4. DUST CONTROL MEASURES SHALL BE IMPLEMENTED DURING DEMOLITION INCLUDING BUT NOT LIMITED TO WATERING DIRT ACCESS ROADS.

DEMOLITION NOTES

- (X1) CONTRACTOR TO REMOVE SUBSTRUCTURES AND FOUNDATIONS IN THEIR ENTIRETY. BACKFILL DITCHES AND OPEN VOIDS. BACKFILL PAVEMENT SLAB REMOVED IN ACCORDANCE WITH GEOTECHNICAL REPORT. COMPACTION SHALL BE MONITORED BY OWNER'S GEOTECHNICAL ENGINEER. CONTRACTOR TO NOTIFY KIMLEY-HORN FOR VERIFICATION IF FOUNDATIONS DEEPER THAN 5 FEET ENCOUNTERED.
- (X2) DEMOLISH EXISTING FENCE.
- (X3) DEMOLISH EXISTING ASPHALT PAVEMENT. INCLUDING BASE COURSE.
- (X4) DEMOLISH EXISTING CURB AND/OR GUTTER.
- (X5) DEMOLISH EXISTING SPEED HUMP.

CITY OF COVINA TREE REQUIREMENTS

CODE REQUIREMENT	SITE REQUIREMENT	PROVIDED
1 TREE FOR EACH 500 SF OF LANDSCAPE AREA	9,111 SF OF LANDSCAPE AREA/500 = 18 TREES	26 TREES
40% OF PROPOSED TREES TO BE 24" BOX SIZE	26 TREES(0.4) = 11 24" BOX TREES	19 24" BOX TREES
12.5% OF TREES TO BE 48" BOX SIZE OR 25% OF TREES TO BE 36" BOX SIZE	26 TREES(0.25) = 7 36" BOX TREES	7 36" BOX TREES
1 TREE FOR EACH 60' LF OF STREET FRONTAGE	510 LF OF STREET FRONTAGE/60 = 9 TREES	26 TREES
1 TREE FOR EACH 6,000 SF OF SITE AREA	148,430 SF OF SITE AREA/6,000 = 25 TREES	26 TREES

LANDSCAPE NOTE:

THE SELECTION OF PLANT MATERIAL IS BASED ON CLIMATIC, AESTHETIC, AND MAINTENANCE CONSIDERATIONS. ALL PLANTING AREAS SHALL BE PREPARED WITH APPROPRIATE SOIL AMENDMENTS, FERTILIZERS AND APPROPRIATE SUPPLEMENTS BASED UPON A SOILS REPORT FROM AN AGRICULTURAL SUITABILITY SOIL SAMPLE TAKEN FROM THE SITE. DECOMPOSED GRANITE SHALL FILL IN BETWEEN SHRUBS TO SHIELD THE SOIL FROM THE SUN, EVAPOTRANSPIRATION, AND RUN-OFF. ALL SHRUB BEDS SHALL BE MULCHED TO A 3" DEPTH TO HELP CONSERVE WATER, LOWER SOIL TEMPERATURE, AND REDUCE WEED GROWTH. THE SHRUBS SHALL BE ALLOWED TO GROW IN THEIR NATURAL FORMS. ALL LANDSCAPE IMPROVEMENTS SHALL FOLLOW THE GUIDELINES SET FORTH BY THE CITY OF COVINA MUNICIPAL CODE.

IRRIGATION NOTE:

AN AUTOMATIC IRRIGATION SYSTEM SHALL BE INSTALLED TO PROVIDE 100% COVERAGE FOR ALL PLANTING AREAS SHOWN ON THE PLAN. THE WATER SUPPLY FOR THIS SITE IS A POTABLE WATER CONNECTION AND A DEDICATED IRRIGATION METER AND SMART CONTROLLER WILL BE PROVIDED. LOW VOLUME DRIP EQUIPMENT SHALL PROVIDE SUFFICIENT WATER FOR PLANT GROWTH WITH NO WATER LOSS DUE TO WATER CONTROLLERS, AND OTHER NECESSARY IRRIGATION EQUIPMENT. ALL POINT SOURCE SYSTEM SHALL BE ADEQUATELY FILTERED AND REGULATED PER THE MANUFACTURER'S RECOMMENDED DESIGN PARAMETERS. ALL IRRIGATION IMPROVEMENTS SHALL FOLLOW THE GUIDELINES SET FORTH BY THE CITY OF COVINA MUNICIPAL CODE.

I HAVE COMPLIED WITH THE CRITERIA OF THE WATER EFFICIENT LANDSCAPE ORDINANCE AND APPLIED THEM FOR THE EFFICIENT USE OF WATER IN THE LANDSCAPE AND IRRIGATION DESIGN PLAN.

RANDALL A. KOPFF JR, LLA 6633

STATE OF CALIFORNIA ESTIMATED WATER USE

TOTAL WATER USE IS CALCULATED BY SUMMING THE AMOUNT OF WATER ESTIMATED FOR EACH HYDROZONE. WATER USE FOR EACH HYDROZONE IS ESTIMATED WITH THE FOLLOWING FORMULA:

EWU (HYDROZONE) = ESTIMATED WATER USE (GAL / YEAR)
ETO = REFERENCE EVAPOTRANSPIRATION (INCHES / YEAR)
PF = PLANT ETO ADJUSTMENT FACTOR
HA = HYDROZONE AREA (S.F.)
.62 = CONVERSION FACTOR
IE = IRRIGATION EFFICIENCY
SLA = SPECIAL LANDSCAPE AREA (S.F.)

EWU (HYDROZONE) = (ETO * PF * HA * .62) / (IE)

HYDROZONE A (DRIP)

ETO	PF	HA	IE	CONVERSION FACTOR	EWU GAL/YEAR
50.1	.2	7057	.81	.62	54125

HYDROZONE B (BUBBLER)

ETO	PF	HA	IE	CONVERSION FACTOR	EWU GAL/YEAR
50.1	.4	832	.75	.62	13783
ESTIMATED TOTAL WATER USE (ETWU)					67908

MAWA (MAXIMUM APPLIED WATER ALLOWANCE)

ETO	ET ADJUSTMENT FACTOR	TOTAL HA	CONVERSION FACTOR	MAWA
50.1	.45	7889	.62	110272
ESTIMATED ANNUAL WATER USE (% OF MAWA)				62

Noise and Vibration Assessment

DUDEK
3615 MAIN STREET, SUITE 103
RIVERSIDE, CALIFORNIA 92501

TECHNICAL MEMORANDUM

To:	Kimberly Comacho, Covina Reliability Project, LLC
From:	Dana Lodico, PE, INCE Bd. Cert., Dudek
Subject:	Noise and Vibration Assessment – Covina Reliability Project, Covina, California
Date:	November 19, 2025
Attachments:	Attachment A: Baseline Sound Measurement Field Data Attachment B: Construction Noise Modeling Input and Output

This report contains Dudek's noise and vibration assessment for the Covina Reliability Project (Project), located in the City of Covina, California (City). The noise and vibration assessment evaluates noise and vibration from Project construction activities and operational noise from on-site stationary mechanical equipment (battery storage units and power conversion systems). The assessment is consistent with the California Environmental Quality Act (CEQA) Appendix G significance criteria checklist regarding applicable local, regional, state, and federal regulations and guidance.

1 Background

1.1 Project Description and Setting

Covina Reliability Project LLC (Applicant) is proposing to construct and operate the Covina Reliability Project (Project), a 110-megawatt (MW) battery energy storage system (BESS) located within the City of Covina, California (City). The Project comprises two sites (east and west), with a total area of approximately 3.4 acres of private land, on Assessor's Parcel Numbers (APNs) 8429-008-029, 8429-008-028, 8429-007-007, 8429-007-006 and 8429-007-005 (Project site). The west site (APNs 8429-008-029 and 8429-008-028) is developed with two buildings currently operating with commercial, manufacturing, and light industrial uses and associated surface parking. The east site (APNs 8429-007-007, 8429-007-006 and 8429-007-005) is developed with a surface parking lot where recreational and commercial vehicles and boats are currently stored. The west site is bordered directly to the east by the Southern California Edison (SCE) Cortez Substation (APN 8429-008-800), which occupies approximately 1.32 acres of private land currently operating electrical distribution infrastructure.

The Project is designed to charge or discharge electricity to and from the grid via a battery energy storage system with associated on-site support components consisting of inverters, collector lines, fencing, access roads, supervisory control, a Supervisory Control and Data Acquisition (SCADA) system, and other ancillary facilities or equipment. The Project would include construction of an on-site Project substation on the west site, which will allow interconnection to the existing and adjacent Southern California Edison (SCE) Cortez Substation via an overhead generation transmission (gen-tie) line. To facilitate operation of the Project, SCE would make various improvements

to the Cortez Substation. SCE's improvements would occur within areas previously disturbed and occupied by existing electrical facilities within and adjacent to the substation.

Battery Energy Storage System

The Project would include placement of battery energy storage enclosures and associated electrical equipment, including medium voltage transformers and power conversation systems. Each unit consists of a storage enclosure/non-occupiable steel cabinet that houses battery modules and power conversion system equipment. The battery storage units are prefabricated off site and arrive to the site fully assembled and ready to be installed and operated. The actual number of energy storage enclosures and types are approximate and subject to change based on available battery technology at the time of construction. Each battery energy storage enclosure would have insulation, a module cooling system, a battery management system, fire detection equipment, power conversion system (PCS) equipment containing the electronic controls, inverters, and a medium voltage step-up transformer. The primary storage components would consist of self-contained electrochemical battery systems using conventional storage technologies with proven safety and performance records. The BESS enclosures would be designed such that the periodic maintenance and replacement of underperforming battery components can be easily performed on an as-needed basis without replacing the entire module.

Project Substation

The Project substation would be the termination point of the 34.5-kilovolt (kV) medium voltage collection system. The power to and from the BESS would be passed through a final interconnection step-up transformer to convert it from 34.5kV to 66kV, which is the Project's interconnection voltage at the SCE Cortez Substation. The open-air Project substation would be on the southern portion of the west site adjacent to the SCE Cortez Substation as shown in the Preliminary Site Plan Improvements .

Operations and Maintenance

Once constructed, the Project would operate 7 days per week, 365 days per year. The facility would be remotely monitored by the original equipment manufacturer and the Applicant. Project operations would be monitored remotely through the SCADA system. The Project would include one single story control enclosure for the SCADA system (approximately 400 to 700 square feet and a height of about 15 feet) near the Project substation.

During operation of the Project substation, operation and maintenance staff would visit the substation periodically for maintenance activities. Routine operations would require one or two workers in a light utility truck to visit the facility on a weekly basis.

Periodic augmentation of batteries within the Project site would occur to maintain the capacity over an approximate 30-year life. Occasionally, on-site maintenance would be required, which may include replacement of equipment and miscellaneous electrical repairs on an as-needed basis. No permanent sanitary facilities would be required. Maintenance trucks would be utilized to perform routine maintenance, including but not limited to equipment testing, monitoring, repair, routine procedures to ensure service continuity, and standard preventative maintenance. Typically, one major maintenance inspection would take place annually.

Generation Transmission and Collection Lines

Gen-Tie Line – West Site

The energy would be transported to and from the Project substation to the adjacent SCE Cortez Substation through a gen-tie line. The 66kV gen-tie line would be installed above ground from an approximately 50-foot point of change over (POCO) pole located within the Project substation, travel overhead approximately 90 feet into the SCE Cortez Substation, where it would connect to a 39-foot tall 66kV dead end switchyard structure, as described further below under SCE Cortez Substation Improvements. The 50-foot gen-tie POCO pole would be constructed of steel and would be at a height that is consistent with the existing equipment within the SCE Cortez Substation and the existing transmission lines along East Edna Place.

Collection Line

The Project would include a 34.5kV below-ground collection (feeder) line that would connect the east site to the west site and substation. As shown in Figure 1-1, Project Location, the collection line would extend from northeast corner of the east site, west along the south side of East Edna Place within a portion of the public right-of-way approximately 600 feet before turning south and interconnecting with the Project substation.

SCE Cortez Substation Improvements

In order to facilitate operation of the Project, SCE would make improvements to the SCE Cortez Substation to accommodate new equipment. These improvements would be made within the existing SCE substation footprint, would be within areas previously disturbed, and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. Below is a summary of improvements to the SCE Cortez Substation:

- Install facilities for a new 66kV switchrack position to terminate the Project's gen-tie line within the SCE Cortez Substation. This work includes the following:
  - One (1) 39-foot tall 66kV dead end switchyard structure
  - Two (2) 66kV voltage transformers with steel pedestal support structures
  - Three (3) 66kV line drops
  - One (1) 66kV circuit breaker
  - Three (3) 66kV group operated disconnect switches, one with grounding equipment
  - Extend bus 1 position to the west within the SCE Cortez Substation fence line
  - 200 feet of conductor from the 39-foot tall 66kV dead end structure within the SCE Cortez Substation to the Project's point of change in ownership location outside SCE Cortez Substation fence line.
- Install telecommunications facilities:
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend fiber optic cable to the communications room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend the Project's diverse telecommunications into the communication room at the SCE Cortez Substation. Approximately

55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.

- Lightwave, channel, and associated equipment (including terminal equipment), supporting protection, remote terminal unit and SCADA requirements at the Project and SCE Cortez Substation.

1.2 Acoustical Fundamentals

1.2.1 Common Terminology

Although the terms may be used interchangeably in the right context, "sound" is defined as any gas or fluid pressure variation detected by the human ear, and "noise" is unwanted sound. The preferred unit for measuring sound is the decibel (dB), which expresses the ratio of sound pressures to a reference value logarithmically and enables a wide range of audible sound to be evaluated and discussed conveniently. On the low end of this range, zero dB is not the absence of sound energy, but instead corresponds approximately to the threshold of average healthy human hearing; on the upper end, 120–140 dB corresponds to an average person's threshold of pain.

The human ear is not equally responsive to all frequencies of the audible sound spectrum. An electronic filter is normally used when taking noise measurements that de-emphasizes certain frequencies in a manner that mimics the human ear's response to sound; this method is referred to as A-weighting. Sound levels expressed under the A-weighted system are sometimes designated dBA. All sound levels discussed in this report are A-weighted.

The equivalent continuous sound level (L_{eq}) is a single dB value which, if held constant during the specified time period, would represent the same total acoustical energy of a fluctuating noise level over that same time period; this is also known as the "average" sound level. L_{eq} values are commonly expressed for periods of 1 hour, but longer or shorter time periods may be specified. Another descriptor is maximum sound level (L_{max}), which is the greatest sound level measured during a designated time interval or event. The minimum sound level (L_{min}) is the lowest measured level and often called the floor of a measurement period.

Unlike the L_{eq}, L_{max}, and L_{min} metrics, equivalent day–night sound level (L_{dn}) and community noise equivalent level (CNEL) descriptors always represent 24-hour periods; these metrics differ from a 24-hour L_{eq} value because they apply a time-weighted factor designed to emphasize noise events that occur during the non-daytime hours (when speech and sleep disturbance is of more concern). "Time weighted" refers to the fact that L_{dn} and CNEL penalize noise that occurs during certain sensitive periods. In the case of CNEL, noise occurring during the daytime (7:00 a.m. to 7:00 p.m.) receives no penalty. Noise during the evening (7:00 p.m. to 10:00 p.m.) is penalized by adding 5 dB to the actual levels, and nighttime (10:00 p.m. to 7:00 a.m.) noise is penalized by adding 10 dB to the actual levels. L_{dn} differs from CNEL in that the daytime period is longer (defined instead as 7:00 a.m. to 10:00 p.m.), thus eliminating the dB adjustment for the evening period. L_{dn} and CNEL are the predominant criteria used to measure roadway noise affecting residential receptors. These two metrics generally differ from one another by no more than 0.5–1 dB and are considered equivalent by many jurisdictions.

1.2.2 Exterior Noise Attenuation

Noise sources are classified in two forms: (1) point sources, such as stationary equipment or a group of construction vehicles and equipment working within a spatially limited area at a given time, and (2) line sources, such as a roadway with a large number of pass-by sources (motor vehicles). Sound generated by a point source typically

diminishes (attenuates) at a rate of 6.0 dBA for each doubling of distance from the source to the receptor at acoustically "hard" sites and at a rate of 7.5 dBA for each doubling of distance from source to receptor at acoustically "soft" sites (Caltrans 2013). Sound generated by a line source (i.e., a roadway) typically attenuates at a rate of 3 dBA and 4.5 dBA per doubling of distance, for hard and soft sites, respectively (Caltrans 2013). Sound levels can also be attenuated by human-made or natural barriers. For the purpose of a sound attenuation discussion, a hard or reflective site does not provide any excess ground-effect attenuation and is characteristic of paved ground surfaces, as well as very hard-packed soils. An acoustically soft or absorptive site is characteristic of unpaved loose soil or vegetated ground.

For example, in the case of a 65 dBA noise level measured at 25 feet from a roadway centerline (a line source) with hard-packed shoulder (a hard site), an attenuation rate of 3 dBA per doubling of distance would apply; the traffic noise would diminish to 62 dBA at 50 feet from the centerline and to 59 dBA at 100 feet from the centerline. On a construction site (point source) where there is open ground with or without vegetation between the construction equipment and receiver (soft site), an attenuation rate of 7.5 dBA per doubling of distance would apply; the construction equipment noise, measured as 85 dBA at 50 feet from the construction equipment, would diminish to 77.5 dBA at 100 feet from the source and to 70 dBA at 200 feet from the source.

1.3 Vibration Characteristics

Per the California Department of Transportation (Caltrans) Transportation and Construction Vibration Guidance Manual (Caltrans 2020), vibration is the periodic oscillation of a medium or object. Vibration can be described in terms of displacement, velocity, or acceleration. Heavy equipment operation, including stationary equipment that produces substantial oscillation or construction equipment that causes percussive action against the ground surface, may be experienced by building occupants as perceptible vibration. It is also common for ground-borne vibration to cause windows, pictures on walls, or items on shelves to rattle; this transfer of vibration energy in the ground to structures resulting in audible sound is termed ground-borne noise. The metric for ground-borne noise is the vibration decibel, written VdB. Although ground-borne noise in structures from such equipment operation can be intrusive to building occupants, the vibration is seldom of sufficient magnitude to cause even minor cosmetic damage to buildings.

Peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal and is expressed in inches/second (in/sec). PPV is most frequently used to describe vibration impacts to buildings but can also be used to quantify vibration annoyance potential for humans. The Caltrans threshold for potential damage to commercial buildings and newer residential structures is 0.5 in/sec PPV (Caltrans 2020), and for older residential buildings, the threshold is 0.3 in/sec PPV.

1.4 Relevant Plans, Policies, and Ordinances

1.4.1 Federal

Federal Transit Administration

In its Transit Noise and Vibration Impact Assessment guidance manual, the FTA recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (FTA 2018) when detailed construction noise assessments are performed to evaluate potential impacts to community residences surrounding a project. Although

this FTA guidance is not a regulation, it can serve as a quantified standard in the absence of such noise limits at the state and local jurisdictional levels.

1.4.2 State

California Department of Transportation Vibration Standards

The California Department of Transportation (Caltrans) conducted extensive research on human annoyance and damage to structures caused by vibration from short term construction activities and from long term highway operations and has published criteria for vibration management (Transportation and Construction Vibration Guidance Manual 2020). These criteria established by Caltrans are commonly used to assess vibration impacts from all types of projects and activities. Caltrans uses a threshold of 0.24 in/sec peak particle velocity (PPV) for annoyance to persons due to a transient source such as construction. For commercial buildings constructed of concrete and steel, Caltrans identifies a damage threshold of 0.5 in/sec PPV. For residential structures employing concrete foundation and wood frame construction, Caltrans identifies a conservative damage threshold vibration level standard of 0.3 in/sec PPV (Caltrans 2020).

1.4.3 Local

Covina General Plan Noise Element

The City's Noise Element of the General Plan (City of Covina 2000) includes the following policies that are applicable to the Project:

- Require noise-reduction techniques and features in site planning, architectural design, project landscaping, building materials, and/or construction, where necessary or required by law.
- Study and consider the existing and potential noise-generating characteristics of commercial, industrial, and other businesses that wish to expand of modify their scope of operation.
- Ensure that commercial or industrial buildings are constructed soundly to prevent adverse noise transmission onto adjacent businesses.
- Continue enforcing Covina's Noise Ordinance and maintaining coordination among City departments / divisions involved in noise abatement.
- Balance the City's obligation to protect local residents and workers from excessive noise exposure with Covina's need to accommodate moderate growth and to continue with ongoing communitywide economic development, commercial revitalization, public improvement enhancement, residential construction, neighborhood preservation, code enforcement, and affordable housing activities / programs.
- Continue implementing the Covina Noise Ordinance to regulate the hours of operation and excessive noise associated with on-site construction activities, particularly activities occurring in or near residential uses, permitting exceptions only under special circumstances.
- Where necessary, require the construction of barriers to shield noise-sensitive uses from intrusive, construction related noise.

- Require that construction activities incorporate feasible and practical techniques, measures, and procedures that minimize the noise impacts on all adjacent uses.

- Consider requiring sound attenuation devices on construction equipment to reduce noises associated with building activities.

City of Covina Municipal Code

The Covina Municipal Code Chapter 9.40 establishes noise level limits to "to reduce noise in the community by prohibiting unnecessary, excessive, and annoying noises from all sources".

Operational Noise

The City's exterior noise level limits are the higher of the measured ambient level or the limits given in Table 1. Interior noise levels are limited to 35 dBA during nighttime hours and 45 dBA during daytime hours inside residences.

Table 1. Exterior Noise Level Limits (dBA)

Receiving Land Use Category	Daytime (7 a.m. to 10 p.m.)	Nighttime (10 p.m. to 7 a.m.)
Residential estate or agricultural	50	40
Residential low density	55	45
Residential medium and high density	60	50
Commercial	65	55
Industrial	70	60

Source: Covina, 2024.
Notes:

- If the measurement location is on a boundary between a commercial or industrial land use category and a residential category, the noise level limit of the lower category plus five decibels shall apply.
- In the event the alleged offensive noise contains a steadily, audible tone such as a whine, screech, or hum, or is a repetitive noise such as hammering or riveting, or contains music or speech conveying informational content, the standard limits set forth in the above table shall be reduced by five decibels.
- In the case where the measured ambient level exceeds the above, the limit shall be increased to reflect the ambient level.

In addition, noise generating uses may not cause or allow the creation of any noise that causes the level to exceed the Table 1 limits by:

- 5 dB for a cumulative period of more than 15 minutes in any hour
- 10 dB for a cumulative period of more than 5 minutes in any hour
- 15 dB for a cumulative period of more than 1 minute in any hour , or
- 20 dB for any period of time

Construction Hours

Noise-generating construction activity within 500 feet of residences is limited to between the hours of 7:00 a.m. and 8:00 p.m. on weekdays and Saturdays, with no construction allowed on Sundays or state holidays that causes annoyance or disturbance to residents.

Vibration

It is unlawful to operate or permit the operation of any device that creates a vibration that is above the vibration perception threshold of an average individual at or beyond the property boundary of the source if on private property or at 150 feet from the source if on a public space or public right-of-way.

Exemptions

Municipal Code Section 9.40.140 establishes certain activities as exempt from Municipal Code noise standards. Exempt activities include permitted events, activities pertaining to the functioning of a utility company regulated by California Public Utilities Commission, vehicular traffic, and emergency activities. This analysis assumes that this exception is not applicable to operations or construction of the Battery Energy Storage System (BESS) Project but may apply to the SCE Cortez Substation.

2 Baseline Sound Level Survey

One long-term (46-hour) unattended and four short-term (15-minute) attended sound pressure level measurements were conducted on February 17 to 19, 2025, to characterize background sound levels at and near the Project site. Measurement locations are shown in Figure 1. Table 1 summarizes the results of the noise measurements. Detailed sound level measurement data are included in Attachment A.

Table 2. Sound Level Monitoring Results, February 19, 2025, dBA L_{eq-1hr}

Site	Measurement Location	Time	Primary Noise Source(s)	Measured L_{eq} (dBA)	Quietest Hour, Daytime	Quietest Hour, Nighttime
ST-1	Nearest Residences to North, along Hurst Street	9:33 a.m.to 9:48 a.m.	Industrial sounds, distant traffic	55	50 (b)	46 (b)
ST-2	Southern Site Boundary along Railroad	9:52 a.m. to 10:07 a.m.	Vehicular traffic	53	50 (b)	46 (b)
ST-3	Residential setback along Barranca Avenue	10:13 a.m. to 10:28 a.m.	Vehicular traffic	69	60 (b)	56 (b)
ST-4	Northern Site Boundary along Edna Place	10:33 a.m. to 10:48 a.m.	Vehicular traffic	63	57 (b)	53 (b)
LT-1	Northern Site Boundary along Edna Place	12:00 p.m. to 10:20 a.m. (a)	Vehicular traffic	56-75	60	56

L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = A-weighted decibels; L_{dn} = day-night average sound level; ST = short-term measurement location. LT = long-term measurement location. See Figure 1 for measurement locations.
(a) Long-term measurement was conducted for a 46-hour period on February 17-19, 2025.
(b) Calculated based on long-term measurement results.

3 Impact Assessment

3.1 Significance Thresholds

To determine whether a project would result in a significant noise impact, Appendix G of the current California Environmental Quality Act Guidelines requires consideration of whether a project would result in:

1. A substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
2. The generation of excessive ground-borne vibration or ground-borne noise levels.
3. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, the exposure of people residing or working in the project area to excessive noise levels.

In light of these above significance criteria, this analysis uses the following standards to evaluate potential noise and vibration impacts.

- Construction noise – The City's Municipal Code limits construction to between the hours of 7:00 a.m. and 8:00 p.m. on weekdays and Saturdays, with no construction allowed on weekends or state holidays. Construction occurring within these hours is exempt from the City's noise limits. For informational purposes, this analysis compares Project construction generated sound levels to the Federal Transit Administration construction noise level threshold of 80 dBA L_{eq} over an 8-hour period.
- Transportation noise – A noise impact due to transportation noise would be considered significant if Project-generated traffic causes the existing levels to increase by more than 3 dB CNEL (considered a perceptible increase in environmental noise).
- Stationary operations noise – Project operational sound sources are limited to the City's limits shown in Table 1. For medium and high-density residential properties, the limit is 60 dBA L_{50} during daytime hours (7 a.m. to 10 p.m.) and 50 dBA L_{50} during nighttime hours (10 p.m. to 7 a.m.). The City includes an allowance for ambient / background sound and a penalty for tonal sounds.
- Construction vibration – Caltrans Guidance (Caltrans 2020) indicates that a vibration velocity of 0.24 ips PPV received at a structure would be considered annoying by occupants and recommends that a vibration level of 0.3 ips PPV be used as the threshold for building damage risk to residential structures and 0.5 ips PPV be used as the threshold for building damage to modern industrial and commercial structures. These thresholds are used in this analysis to determine vibration impacts.

3.2 Threshold 1 – Substantial Temporary or Permanent Increase in Ambient Noise Levels

3.2.1 Construction Noise

One of the most extensive and widely used databases for sound levels from motorized or powered construction equipment is the Noise Source Database developed under National Cooperative Highway Research Program 25-49 (NCHRP 25-49), Development of a Highway Construction Noise Prediction Model (NASEM 2022). While the focus of data compilation was for equipment that would typically be employed for the construction of transportation facilities, the list is comprehensive enough to be useful in assessing sound levels for nearly every activity for which powered equipment is used. Table 3 provides a list of the maximum sound levels generated by various powered equipment that could be associated with construction of the Project.

Table 3. Selected Powered Equipment Noise Emission Levels

Equipment	Average Sound Level (dBA L_{eq}) – 50 feet from Source	Maximum Sound Level (dBA L_{max}) – 50 feet from Source
Air Compressor	66	67
Aerial Lift (Man Lift)	72	73
Backhoe	76	84
Compactor (Plate)	—	75
Compactor (Roller)	82	83
Concrete Mixer	81	82
Concrete Saw	85	88
Crane, Mobile	74	76
Dozer	80	86
Forklift	—	88
Generator	67	68
Grader	—	79
Horizontal Bore Drill	87	88
Loader	72	81
Paving - Asphalt	—	83
Paving - Concrete	85	88
Pump	73	74
Scraper	—	92
Flatbed Truck	—	74
Welding Machine	71	72

Source: NASEM 2022.
Notes: dBA = A-weighted decibel; L_{eq} = average noise level equivalent; L_{max} = maximum instantaneous noise level; — = Equipment without average (L_{eq}) noise levels are non-stationary and best represented only by maximum instantaneous noise level (L_{max}).

The equipment sound levels presented in Table 3 include both average L_{eq} and maximum L_{max} sound levels, measured at a distance of 50 feet using a "slow" response time constant (1 second). Usually, construction equipment operates in alternating cycles of full power and low power, producing average noise levels over time that are less than the maximum noise level. The average sound level of construction activity also depends on the amount of time that the

equipment operates and the intensity of construction activities during that time. Noise emissions from the construction of the Project were estimated based upon default construction scenario information provided by the California Emissions Estimator Model (CalEEMod) (Version 2022.1.1.29) for the type and size of proposed development and included phasing, equipment mix, and vehicle trips. The construction equipment mixes used for estimating the Project-generated construction noise emissions are included in Attachment B.

Construction Equipment Inventory

The California Air Resources Board CalEEMod was used to identify the construction equipment anticipated for development of the Project, including earthwork, utility trenching and equipment installation, and paving activities. The equipment list is based upon the detailed Project description; CalEEMod identified the anticipated equipment shown in Table 4 for each phase of the Project construction.

Table 4. Construction Equipment Per Phase

Construction Phase	On Site Equipment Types (and Quantities)	One-Way Vehicle Trips (by Type) per Day
Demolition of Existing Facilities / Site Preparation	Excavator, Grader, Rubber Tired Loader, Skid Steer Loader, Tractor/Loader/Backhoe, Generator Set (1 each)	Autos (40), Haul Trucks (12)
Grading	Grader, Tractor/Loader/Backhoe, Skid Steer Loader, Generator Set (1 each)	Autos (40), Vendor Trucks (2), Haul Trucks (4)
Collector Substation Installation	Tractor/Loader/Backhoe	Autos (40), Vendor Trucks (4), Haul Trucks (4)
Battery/Container Installation	Rubber Tired Loader, Excavator, Forklift, Crane, Grader, Skid Steer Loader, Welder, Generator Set, Paving Equipment, Paving Roller (not vibratory) (1 each)	Autos (12), Vendor Trucks (14), Haul Trucks (4)
SCE Substation Construction / Upgrades	Crane, Forklift, Generator Set, Air Compressor, Sweeper, Tractor/Loader/Backhoe, Trencher (1 each)	Autos (36), Vendor Trucks (28), Haul Trucks (0)
Gen-tie Installation	Tractor/Loader/Backhoe, Concrete Saw, Other Equipment (1 each)	Autos (10), Vendor Trucks (4), Haul Trucks (4)
Decommissioning	Tractor/Loader/Backhoe	Autos (40), Vendor Trucks (10), Haul Trucks (8)

On-Site Construction Noise Assessment

With the sound sources identified in Tables 3 and 4 above, an analysis was performed with a Microsoft Excel–based noise prediction model using the National Cooperative Highway Research Program reference data shown in Table 3. Input variables include the equipment type (backhoe, crane, truck, etc.), the number of equipment pieces, the duty cycle for each piece of equipment (i.e., percentage of each hour the equipment typically works), and the distance from the sensitive receptor. Pile driving is not anticipated as a method of construction. Refer to Attachment B for the construction modeling inputs and results. Construction noise levels were predicted at the nearest sound-sensitive land uses (i.e., residences) in each direction from the Project site, based on the distance between the closest Project construction boundary and these residences. Aggregate sound emissions from Project construction activities, broken down by sequential phase of construction, was predicted for the worst-case construction activity occurring along the closest construction boundary to the off-site closest sensitive receptors.

Construction activities are limited to between 7:00 a.m. and 8:00 p.m. on weekdays and Saturdays, with no construction allowed on weekends or state holidays. The City does not contain any quantitative noise limits for construction; therefore, it is appropriate to employ a numeric standard adopted by another agency for daytime construction noise assessment. In its Transit Noise and Vibration Impact Assessment guidance manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (L_{eq8hr}) when detailed construction noise assessments are performed to evaluate potential impacts to community residences or other noise-sensitive land uses surrounding a project (FTA 2018). Although this FTA guidance is not a regulation, many communities employ it as a quantified standard in the absence of such limits at the local jurisdictional level. Dudek compared predicted construction noise levels to the recommended FTA construction noise exposure limits and to measured ambient noise levels.

Noise-sensitive uses in the general vicinity of the Project site include residences located about 250 feet to the west and about 340 feet to the north of the site. Using the provided construction information and the distance identified from the edge of a future construction zone boundary to the closest receivers, the construction noise model was used to predict sound levels from on-site construction activities. The construction noise was modeled at distances representative of the closest noise-sensitive receptors to the Project site, without taking shielding into account. The results are summarized in Table 5. Most of these residences are well shielded from the site by intervening commercial structures, which would provide 5 to 20 dB of additional reduction from the conservative noise levels given in Table 5.

Table 5. Construction Noise Levels, Worst-Case

Task/Activity	Closest Residences to West (250 feet)	Closest Residences to North (340 feet)
	dBA $L_{eq\ 8hr}$	dBA $L_{eq\ 8hr}$
Demolition of Existing Facilities / Site Preparation	65	62
Grading	63	60
Collector Substation Installation	58	55
Battery/Container Installation	71	68
SCE Substation Construction / Upgrades	73	70
Gen-tie Installation	72	69
Decommissioning	62	59

Note: $L_{eq\ 8hr}$ = average noise level equivalent over an 8-hour period.

Table 5 presents the results of the construction noise prediction assuming all equipment is simultaneously operating along the Project site boundary closest to the identified receiver, without taking shielding from intervening buildings into account. As indicated in Table 5, worst-case construction noise levels would range from 58 to 73 dBA $L_{eq\ 8hr}$ at unshielded residences to the west and 55 to 70 dBA $L_{eq\ 8hr}$ at unshielded residences to the north. These worst-case levels are below Federal Transit Administration construction noise level threshold of 80 dBA $L_{eq\ -8h.}$ Construction noise levels would be lower as equipment moves around the site or into shielded areas. As described above, shielding from intervening structures would be anticipated to provide 5 to 20 dB of noise reduction.

The construction average noise levels reported in Table 5 at the worst-case exposure receiver (residence to the west on Barranca Avenue) would be up to 4 dB above the measured daytime level and up to 13 dB above the calculated quietest hour (see ST-3 in Table 2) assuming all construction is collocated and operating

simultaneously in an unshielded area at the boundary nearest this residence, which would be barely perceptible to clearly noticeable. At residences to the north, worst-case construction would be up to 15 dB above the measured daytime level and up to 20 dB above the calculated quietest hour (see ST-1 in Table 2), which would be clearly noticeable. These increases would be temporary and would occur for short periods of time only. During other phases of construction and as construction equipment travels around the site or into shielded locations, sound levels would be lower and may be barely noticeable.

Construction activities would comply with the FTA recommended construction noise limit of 80 dBA $L_{eq\ 8hr}$ and would be conducted during the City's allowable hours. The average noise levels at exterior areas would not be harmful, nor would they disturb sleep or present a deterrent to use of outdoor activity, yard, or patio areas. Residences shielded by intervening structures would experience sound levels that are 5 to 20 dBA lower than those described above. Further, interior sound levels would be anticipated to be 15 dB lower with windows open and 25 dB with windows shut. Consequently, on-site construction noise levels (including SCE improvements) would result in a **less than significant** temporary noise impact.

Construction Traffic Noise Assessment

One-way vehicle trips per day during each phase of construction are provided in Table 4. Based on the traffic study conducted for the Project, the peak period of Project construction would generate approximately 92 daily trips (62 autos, 22 medium trucks, and 8 heavy trucks) and 39 AM and PM peak hour trips (31 autos, 6 medium trucks, and 2 heavy trucks). Construction activities associated with the SCE substation upgrades would occur concurrently with the gen-tie line stringing and pulling phase and would result in lower traffic noise levels than the peak period due to a fewer number of heavy trucks. Given the location of the Project, construction vehicles are most likely to travel along Edna Place east to Grand Avenue or west to Barranca Avenue. There are no residences located along Edna Place, but there are residences along Grand Avenue and Barranca Avenue.

Traffic noise modeling using the Federal Highway Administration's Traffic Noise Model, TNM, (FWHA, 2004) and assuming all traffic is traveling along a single roadway, indicates that peak hourly construction traffic would result in an hourly average noise level of 55 dBA L_{eq} at a distance of 50 feet from the centerline and at a speed of 40 mph (the speed limit of both Grand Avenue and Barranca Avenue). As given in Table 2 (see ST-3), existing daytime sound levels along Barranca Avenue range from 60 to 69 dBA. Given that Grand Avenue is a more traveled roadway than Barranca Avenue, existing traffic noise levels along Grand Avenue would be expected to be higher than those along Barranca Avenue. While individual truck movements associated with Project construction traffic may be noticeable as they pass by sound sensitive locations, such occasions would sound similar to existing heavy truck pass-bys, and the overall increase would not be measurable. The increase in traffic noise levels during construction would be negligible. This would be a **less than significant** temporary noise impact.

3.2.2 Operational Noise

Methodology

Sound modeling of on-site Project operations was conducted in accordance with ISO Standard 9613-2, Acoustics – Attenuation of Sound During Propagation Outdoors, Part 2: General Method of Calculation, implemented using Datakustik's CadnaA software application. The CadnaA model takes into account source sound power levels, surface reflection and absorption, atmospheric absorption, geometric divergence, meteorological conditions, walls,

barriers, and berms. The Project area was modeled with a conservative ground factor of G = 0 to represent pavement. A temperature of 10°C with 70% relative humidity was used. No attenuation due to foliage was included.

Sound sources modeled for the Project were major producers of continuous-type noise generation, which include battery containers, power conversion systems (PCSs), and main power transformers at the Project collector substation. While there may be other electrical transmission system components on site, such as breakers and buses, their noise emissions are—if any—sporadic and thus have no meaningful contribution to overall aggregate noise emission from the BESS facility during charging or discharging conditions. The following sound sources are included in the sound propagation model:

- *Battery energy storage containers*: For modeling purposes, the Project proposes to use Tesla Megapack 2 XL battery storage systems. These battery storage containers are integrated with inverters. The primary sound source within the containers is operation of the thermal management system (i.e., the chiller and/or cooling fan[s]) and the inverter. Sound test results for the battery energy storage enclosures by octave band were provided from the manufacturer for a variety of operating conditions. The Project proposes to use the FN03 5-fan configuration at 80% fan duty cycle. This operating condition generates a sound power level of 91 dBA. This equipment operating at fan duty cycles of 80%, 70%, and 50% or less is not tonal. The equipment is tonal at fan duty cycles of 90% and 60%, which will not be used by the Project. The Project proposes installation of 136 potential locations on site.
- *Substation transformers*: The Project utilizes one 128 mega volt-amp high voltage transformer. Based on the methodology outlined in the Electric Power Plant Environmental Noise Guide (Teplitzky et al. 1979), this would generate a sound power level of 100 dBA under full power with cooling fans operating (i.e., oil natural air force or ONAF conditions).
- *Medium voltage transformers*: The Project utilizes 34 4.8 mega volt-amp high voltage transformer. Based on the methodology outlined in the Electric Power Plant Environmental Noise Guide (Teplitzky et al. 1979), these would each generate a sound power level of 78 dBA under full power with cooling fans operating (i.e., oil natural air force or ONAF conditions).

Sound-sensitive uses in the vicinity of the Project site include multi-family residences located about 250 feet to the west and suburban residences located about 340 feet to the north. The Covina Senior Community Center is located about 600 feet to the northwest. All of these sensitive receptors are shielded from the site by intervening structures and the northern residences are also shielded behind a 5-foot 4-inch solid wall. Sound modeling included eight discrete off-site receivers. In addition, a grid of in-model receivers spaced 2 meters by 2 meters was set at a height of 1.5 meters (5 feet) aboveground, spanning the Project area and its immediate surroundings.

An 8-foot-high sound barrier is proposed as part of the Project, to be located around the Facility. This barrier is included in the sound modeling results.

On-Site Operation Noise Assessment

The applicable sound limit at each receptor is shown in Table 6. The model results are presented graphically in Figure 2, Sound Modeling Results for Project Operations, and numerically in Table 7, compared to the applicable sound limit at each receptor. Table 7 compares Project operational sound levels to background sound levels at these locations. Note that the 5-fan equipment is not tonal at fan duty cycles of 80%, 70%,

and 50% or less but is tonal at fan duty cycles of 90% and 60%. The Project will not operate at these tonal fan duty cycles.

Table 6. Modeled Project Operation Sound Levels Compared to Muni Code Limits

Model Receiver	Land Use	City Limit, Unadjusted		Quietest Hour, L_{eq} dBA		Tonal?	Ambient Adjustment?	Adjusted Limits, dBA	
		Day	Night	Day	Night			Day	Night
R1	Residential	60	50	50	46	No	No	60	50
R2	Residential	60	50	50	46	No	No	60	50
R3	Residential	60	50	50	46	No	No	60	50
R4	Residential	60	50	50	46	No	No	60	50
R5	Residential	60	50	50	46	No	No	60	50
R6	Residential	60	50	60	56	No	Yes	60	56
R7	Residential	60	50	60	56	No	Yes	60	56
R8	Senior Center	65	55	60	56	No	Yes	65	56

Notes: dBA = A-weighted decibel; L_{eq} = average noise level equivalent.

As indicated in Table 7, the sound level exposures at the nearest residences would be 45 to 52 dBA L_{eq} assuming continuous operation of the 80% fan-duty cycle conditions. At the senior center, the sound level exposure would be 46 dBA L_{eq}. As shown in Figure 2 and Table 7, the nearest sound sensitive locations are outside of the sound level limits given in Table 6 and would be similar to or below existing background sound levels (see Tables 1 and 6).

Table 7. Modeled Project Operation Sound Levels of 5-fan Configuration at 80% Fan Duty Cycle with 8-foot-high Barrier Compared to Muni Code Limits

Model Receiver	Land Use	Modeled Project Operational Noise Level, dBA L_{eq}	Adjusted Nighttime City Code Limit, dBA L_{eq}
R1	Residential	49	50
R2	Residential	49	50
R3	Residential	45	50
R4	Residential	47	50
R5	Residential	49	50
R6	Residential	49	56
R7	Residential	52	56
R8	Senior Center	46	56

Notes: dBA = A-weighted decibel; $L_{eq\ 1hr}$ = average noise level equivalent over a 1-hour period; L_{eq} = average noise level equivalent.

Operational sound levels would meet the City's adjusted noise limits. As a result, Project operational noise levels would be **less than significant**.

Operational Traffic Noise Assessment

The Project will be operated remotely through the SCADA system and occasionally, on-site maintenance would be required. It is expected that the fully developed Project will require one or two workers to visit the facility on a weekly

basis. The number of permanent trips (4 daily trips or less) associated with the Project operations is not expected to make a measurable change in the traffic noise levels generated along the local roadway network. The operational traffic noise conditions in the Project vicinity would not substantially differ from existing conditions. As a result, Project operational traffic noise level increases would be **less than significant**.

3.3 Threshold 2 – Generation of Excessive Ground-borne Vibration or Ground-borne Noise Levels

3.3.1 Construction Vibration

Methodology

Construction activity can result in varying degrees of ground vibration and ground-borne noise at local receptors, depending on the equipment and methods used, distance to the affected structures, and soil type. Caltrans has been assembling data for vibration and ground-borne noise levels generated by heavy construction equipment operation during the building of transportation projects for many years. The vibration and ground-borne noise levels from use of such equipment are representative for other types of construction efforts, not just transportation projects, and are therefore widely employed to assess vibration and ground-borne noise levels from heavy equipment use for any effort. According to Caltrans (2020), the most important equipment relative to generation of vibration and ground-borne noise, and the vibration levels produced by such equipment that is proposed to be used for Project construction, is illustrated in Table 8.

Table 8. Vibration Velocities for Typical Construction Equipment

Equipment	PPV at 25 Feet (Inches Per Second)
Large Bulldozer	0.089
Loaded Trucks	0.076
Small Bulldozer	0.003

Source: Caltrans 2020.
Note: PPV = peak particle velocity; VdB = vibration decibel.

Ground-borne vibration attenuates rapidly, even over short distances. The attenuation of ground-borne vibration as it propagates from source to receptor through intervening soils and rock strata can be estimated with expressions found in Caltrans guidance (Caltrans 2020). The following equation is used to calculate PPV at any distance of interest from the operating construction equipment.

$$PPV_{rcvr} = PPV_{ref} * (25/D)^{1.1}$$

In the above equation, PPV_{rcvr} is the predicted vibration velocity at the receiver position, PPV_{ref} is the reference value at 25 feet from the vibration source (as listed in Table 8), and D is the actual horizontal distance to the receiver.

Construction Vibration Assessment

The City does not have quantitative thresholds on construction vibration that would be applicable to the Project; therefore, it is appropriate to employ a numeric standard adopted by another agency. The California Department of Transportation (Caltrans 2020) establishes a construction-related damage limit of 0.25 in/sec PPV for historic and

old buildings, 0.3 in/sec PPV for older residential structures, and 0.5 in/sec PPV for new residential and modern commercial/industrial structures. The applicable threshold for Project-attributed construction vibration would be 0.3 in/sec PPV at the closest residences and 0.5 in/sec PPV at the closest industrial building.

The closest residential structures to the Project site are located about 250 feet to the west, across Barranca Avenue and the closest non-residential structures adjoin both sites to the west, about 10 feet from the nearest construction. As shown in Table 4, the Project does not propose any pile drivers, vibratory rollers, or similar high vibration generating equipment. Using the vibration source level of construction equipment provided in Table 8, the distance to the closest structures, and the equation supplied in the Caltrans (2020) construction ground-borne vibration assessment methodology (above), the Project construction-related vibration levels were calculated as shown in Table 9.

Table 9. Construction Vibration Levels at Nearest Structures, inches per second

Equipment	PPV (in/sec) at Nearest Residencial Structure (250 feet)	PPV (in/sec) at Nearest Nonresidential Structure (10 feet)
Large Bulldozer	0.007	0.244
Loaded Trucks	0.006	0.208
Small Bulldozer	0.000	0.008

Note: PPV = peak particle velocity.
Source: Caltrans 2020.

As indicated in Table 9, Project construction (including SCE improvements) would result in vibration levels that are below the applicable significance thresholds at the closest sensitive receptors. This is a **less than significant** impact.

3.3.2 Operational Vibration

The Project does not include any operational equipment that is anticipated to generate vibration levels that would be perceptible off site. **No Impact.**

3.4 Threshold 3 – Exposure of People Residing or Working in the Project Area to Excessive Airport Noise Levels

Bracket Field Airport is located about 5 miles east of the site and San Gabriel Valley Airport is located about 8.5 miles to the west of the site. There are no private or public airports within 2 miles of the site. There are no public or private airports within 2 miles of the Project site. Therefore, the Project would not expose people residing or working in the Project area to excessive noise levels**. No Impact.**

Transportation Assessment

DUDEK
MAIN OFFICE
605 THIRD STREET
ENCINITAS, CALIFORNIA 92024
T 800.450.1818 F 760.632.0164

MEMORANDUM

To:	Kimberly Comacho, Covina Reliability Project, LLC
From:	Lisa Valdez, Senior Transportation Planner
Subject:	Covina Reliability Project Transportation Assessment
Date:	November 19, 2025
cc:	Elora Babbini, Project Manager, Dudek
Attachments:	Attachment A: San Gabriel Valley Council of Governments VMT Screening results

Dudek has prepared the following transportation assessment for the proposed Covina Reliability Project (Project), a battery energy storage system (BESS) on approximately 3.41 acres located north of San Bernardino Freeway/Interstate 10 (I-10) and south of Foothill Freeway/Interstate 210 (I-210) in the City of Covina (City). The following analysis has been prepared consistent with the City's General Plan Circulation Element (Covina 2000), the City's Transportation Study Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment (City of Covina 2020), and guidelines from the Governor's Office of Land Use and Climate Innovation (LCI) (LCI 2018) for the purposes of analyzing transportation impacts under the California Environmental Quality Act (CEQA).

This memorandum describes the existing transportation setting, presents the estimated Project trip generation during peak construction and Project operations, evaluates the Project site access, and presents a VMT screening analysis.

1 Project Description

Covina Reliability Project LLC (Applicant) is proposing to construct and operate the Covina Reliability Project (Project), a 110-megawatt (MW) battery energy storage system (BESS) located in Los Angeles County, approximately 15 miles east of the City of Los Angeles, within the City of Covina. The Project comprises two sites (east and west), with a total area of approximately 3.4 acres of private land, on Assessor's Parcel Numbers (APNs) 8429-008-029, 8429-008-028, 8429-007-007, 8429-007-006 and 8429-007-005 (Project site). The west site (APNs 8429-008-029 and 8429-008-028) is developed with two buildings currently operating with commercial, manufacturing, and light industrial uses and associated surface parking. The east site (APNs 8429-007-007, 8429-007-006 and 8429-007-005) is developed with a surface parking lot where recreational and commercial vehicles and boats are currently stored (Figure 1-1, Project Location).

The general area immediately surrounding the Project site includes similar commercial, manufacturing, and light industrial uses. Beyond this area to the west and north, there are multi-family residential uses, and a senior center

[1] West site is approximately 1.34 acres and east site is approximately 2.07 acres for a total of approximately 3.4 acres, rounded.

and park to the northwest beyond these uses. There is a railroad alignment immediately bordering the Project site to the south, with commercial and institutional uses beyond this. The west site is bordered by the 1.32 acre Southern California Edison (SCE) Cortez Substation to the east with similar commercial, manufacturing, and light industrial uses beyond both sites.

The Project is designed to charge or discharge electricity to and from the grid via a battery energy storage system with associated on-site support components consisting of inverters, collector lines, fencing, access roads, supervisory control, a Supervisory Control and Data Acquisition (SCADA) system, and other ancillary facilities or equipment. The Project would include construction of an on-site Project substation on the west site, which will allow interconnection to the existing and adjacent SCE Cortez Substation via an overhead generation transmission (gen-tie) line. To facilitate operation of the Project, SCE would make various improvements to the Cortez Substation. SCE's improvements would occur within areas previously disturbed and occupied by existing electrical facilities within and adjacent to the substation.

Battery Energy Storage System

The Project would include placement of battery energy storage enclosures and associated electrical equipment, including medium voltage transformers and power conversation systems. Each unit consists of a storage enclosure/non-occupiable steel cabinet that houses battery modules and power conversion system equipment. The battery storage units are prefabricated off site and arrive to the site fully assembled and ready to be installed and operated. The actual number of energy storage enclosures and types are approximate and subject to change based on available battery technology at the time of construction. Each battery energy storage enclosure would have insulation, a module cooling system, a battery management system, fire detection equipment, power conversion system (PCS) equipment containing the electronic controls, inverters, and a medium voltage step-up transformer. The primary storage components would consist of self-contained electrochemical battery systems using conventional storage technologies with proven safety and performance records. The BESS enclosures would be designed such that the periodic maintenance and replacement of underperforming battery components can be easily performed on an as-needed basis without replacing the entire module.

Fire detection measures are incorporated in the Project design in accordance with National Fire Protection Association (NFPA) safety standards. It should be noted that selection of batteries would be based on supply chain considerations;[2] as such, the capacity and size of the containers may change, as may the ratings of the conversion equipment (inverters and transformers). The number of containers, inverters, and transformers and expected total megawatt capacity are an estimate based on currently available technology and are similar to components typically found in BESS facilities. While the battery technology may change, the overall development footprint of the Project would remain consistent. As further described herein, anticipated minor alterations to the configuration of the BESS containers and related facilities within the Project footprint would not result in significant changes to the project design such that these alterations would impact the conclusions in this IS/ND.[3]Individual lithium-ion, or similar technology, battery cells form the core of the BESS. Cells are assembled either in series or parallel connection in sealed battery modules. The battery modules would be installed in self-supporting racks electrically connected

[2] The battery energy storage enclosures are manufactured by Tesla, Fluence, LG Chem, and a number of other manufacturers. The specific manufacturer will be selected at a future date based on supply chain considerations and available battery technology at the time of construction.

[3] *Residents Against Specific Plan 380 v. County of Riverside* (2017) 9 Cal.App.5th 941.

either in a series or parallel to each other. The individual battery racks are connected in series or parallel configuration to deliver the BESS power rating. The battery racks would be fused.

The BESS facility would be unstaffed and would include remote operational control; inspections/maintenance would be performed as necessary. The BESS facility would be uninhabited with no bathroom facilities, running water, or office space. Project operations would be monitored remotely through the SCADA system that would be housed in an enclosure adjacent to the Project substation. Periodic inspections and maintenance activities would occur on the Project site.

Project Substation

The Project substation would be the termination point of the 34.5-kilovolt (kV) medium voltage collection system. The power to and from the BESS would be passed through a final interconnection step-up transformer to convert it from 34.5kV to 66kV, which is the Project's interconnection voltage at the SCE Cortez Substation. The open-air Project substation would be on the southern portion of the west site adjacent to the SCE Cortez Substation.

Operations and Maintenance

Once constructed, the Project would operate 7 days per week, 365 days per year. The facility would be remotely monitored by the original equipment manufacturer and the Applicant. Project operations would be monitored remotely through the SCADA system. The Project would include one single story control enclosure for the SCADA system (approximately 400 to 700 square feet and a height of about 15 feet) near the Project substation.

During operation of the Project substation, operation and maintenance staff would visit the substation periodically for maintenance activities. Routine operations would require one or two workers in a light utility truck to visit the facility on a weekly basis.

Periodic augmentation of batteries within the Project site would occur to maintain the capacity over an approximate 30-year life. Occasionally, on-site maintenance would be required, which may include replacement of equipment and miscellaneous electrical repairs on an as-needed basis. No permanent sanitary facilities would be required. Maintenance trucks would be utilized to perform routine maintenance, including but not limited to equipment testing, monitoring, repair, routine procedures to ensure service continuity, and standard preventative maintenance. Typically, one major maintenance inspection would take place annually.

Generation Transmission and Collection Lines

Gen-Tie Line – West Site

The energy would be transported to and from the Project substation to the adjacent SCE Cortez Substation through a gen-tie line. The 66kV gen-tie line would be installed above ground from an approximately 50-foot point of change over (POCO) pole located within the Project substation, travel overhead approximately 90 feet into the SCE Cortez Substation, where it would connect to a 39-foot tall 66kV dead end switchyard structure, as described further below under SCE Cortez Substation Improvements. The 50-foot gen-tie POCO pole would be constructed of steel and would be at a height that is consistent with the existing equipment within the SCE Cortez Substation and the existing transmission lines along East Edna Place.

Collection Line

The Project would include a 34.5kV below-ground collection (feeder) line that would connect the east site to the west site and substation. As shown in Figure 1-1, Project Location, the collection line would extend from northeast corner of the east site, west along the south side of East Edna Place within a portion of the public right-of-way approximately 600 feet before turning south and interconnecting with the Project substation.

SCE Cortez Substation Improvements

In order to facilitate operation of the Project, SCE would make improvements to the SCE Cortez Substation to accommodate new equipment. These improvements would be made within the existing SCE substation footprint, would be within areas previously disturbed, and would be of a similar height and scale as existing improvements within the SCE Cortez Substation. Below is a summary of improvements to the SCE Cortez Substation:

- Install facilities for a new 66kV switchrack position to terminate the Project's gen-tie line within the SCE Cortez Substation. This work includes the following:
  - One (1) 39-foot tall 66kV dead end switchyard structure
  - Two (2) 66kV voltage transformers with steel pedestal support structures
  - Three (3) 66kV line drops
  - One (1) 66kV circuit breaker
  - Three (3) 66kV group operated disconnect switches, one with grounding equipment
  - Extend bus 1 position to the west within the SCE Cortez Substation fence line
  - 200 feet of conductor from the 39-foot tall 66kV dead end structure within the SCE Cortez Substation to the Project's point of change in ownership location outside SCE Cortez Substation fence line.
- Install telecommunications facilities:
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend fiber optic cable to the communications room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
  - Approximately 150 feet of underground fiber optic cable and one (1) vault would extend the Project's diverse telecommunications into the communication room at the SCE Cortez Substation. Approximately 55 feet of 1-to-5-inch conduit would also be installed from the relay house to the new vault within a trench that would be approximately 18 inches wide and 36 inches deep.
  - Lightwave, channel, and associated equipment (including terminal equipment), supporting protection, remote terminal unit and SCADA requirements at the Project and SCE Cortez Substation.

Project Location

Covina Reliability Project

2 Transportation Setting

This section describes key study area roadways, as well as transit, pedestrian, and bicycle facilities within the vicinity of the Project.

Access to the Project site would be from eastbound or westbound I-10 via the interchange with Barranca Street to Edna Place or from eastbound or westbound I-210 via the interchanges with Grand Avenue or Citrus Avenue to Edna Place. A description of the nearby roads serving the site is provided below.

- San Bernardino Freeway/Interstate 10 (I-10) provides regional east-west access from its westerly origin in Santa Monica, through the Western San Gabriel Valley, and eastward through the southern United States. I-10 is a ten-lane divided freeway through the region. The nearest interchange providing access to the site is located at Barranca Street.

- Foothill Freeway/Interstate 210 (I-210) provides regional east-west access from its' westerly origin in San Fernando Valley, through the Western San Gabriel Valley before transitioning to State Route 210. I-210 is an east west ten-lane divided freeway through the region. The nearest interchanges providing access to the site are located at Grand Avenue and Citrus Avenue.

- Barranca Avenue is a four-lane, undivided north-south roadway. The City's Circulation Element designates Barranca Avenue as a Collector – A. Sidewalks are provided on both sides of the street. There are no bicycle facilities in the study area. The posted speed limit is 40 miles per hour (MPH).

- Citrus Avenue is a four-lane, north-south roadway which has divided and undivided segments. The City's Circulation Element designates Citrus Avenue as a Collector – A. Sidewalks are provided on both sides of the street and there are Class II bike lanes. The posted speed limit is 35 MPH.

- Edna Place is a two-lane, undivided east-west roadway. The City's Circulation Element designates Edna Place as a Local roadway. There are no bicycle facilities in the study area and sidewalks are present intermittently along the road. There is no posted speed limit.

- Grand Avenue is a four-lane, divided north-south roadway. The City's Circulation Element designates Grand Avenue as a Secondary Arterial. There are no bicycle facilities in the study area. However, sidewalks are present, and the posted speed limit is 40 miles per hour. Grand Avenue is a designated truck route in the City Municipal Code.

Transit service in Covina is provided by Foothill Transit and Metrolink. Foothill Transit provides fixed bus routes while Metrolink is a commuter train connecting riders to Union Station in downtown Los Angeles. The City of Covina also provides a Dial-A-Ride service for residents who are 60 years of age or older within city boundaries and to local medical and government offices within a 3-mile radius of Covina.

Routes 281 and 488 and the San Bernardino Metrolink line are the closest transit routes to the Project site. The nearest bus stop is located near the intersection of 2nd Avenue and San Bernardino Road, approximately 0.5 miles southwest of the Project site and serves Route 281. Route 281 operates from 5:00 a.m. to 7:00 p.m. on weekdays

with 30-minute headways. On the weekends, the route operates from 6:18 a.m. to 7:27 p.m. with one-hour headways. Route 281 connects Glendora to the north to Puente Hills Mall to the south (Foothill Transit 2024).

The nearest bus stop for Route 488 is located at the intersection of Grand Avenue and San Bernardino Road, approximately 0.5 miles southeast of the Project site. Route 488 operates from 4:10 a.m. to 10:12 p.m. during the weekdays with headways ranging from 20 minutes to one hour. During the weekends, Route 488 operates from 6:50 a.m. to 10:56 p.m. with headways ranging from 45 minutes to one hour. Route 488 connects Glendora to El Monte (Foothill Transit 2024).

The nearest Metrolink station for the San Bernardino line is located near Citrus Avenue and Front Street, approximately 0.5 miles southwest of the Project site. During weekdays, Metrolink's Covina station serves the San Bernardino line from 4:49 a.m. to 10:24 p.m. with headways of 30 minutes to one hour. During the weekends, Metrolink operates from 7:37 a.m. to 10:17 p.m. with headways of one hour. The San Bernardino Route connects San Bernardino to downtown Los Angeles (Metrolink 2025).

The Project site is primarily surrounded by a mix of general industrial and residential uses with limited bicycle infrastructure provided. Sidewalks are provided along Barranca Avenue and along some portions of Edna Place. There are no sidewalks along the Project frontage.

3 Project Traffic

Construction of the Project would occur over an approximately 14-month period anticipated to start in 2025. It is anticipated that the highest volumes of construction-related traffic would occur over a three-month period, when multiple phases of Project construction would occur concurrently. This includes phases for the Collector Substation installation, Battery/Container installation, and the Gen-tie installation. This peak construction period was evaluated to determine the maximum volume of construction related traffic. Trip generation estimates for the peak construction phase includes the number of workers and the amount of truck traffic that would be generated to and from the site daily and during the AM and PM peak commuting hours. The overall peak construction period was used to calculate the estimated trip generation for the Project, and are based on the air quality analysis assumptions developed for the Covina Reliability Project Air Quality Technical Memorandum (Dudek 2025).

3.1 Construction Trip Generation

Generally, construction work schedules are expected to be at least 10 hours per day Monday through Friday, excluding weekends and federal holidays (City Municipal Code, Chapter 9.40, Section 9.40.110). Typically, the workday would consist of one shift beginning as early as 7:00 a.m. and ending as late as 6:00 p.m. The work schedule may be modified throughout the year to account for the changing weather conditions. To provide a conservative analysis, all construction workers were assumed to arrive inbound to the site during the AM peak period (7:00 a.m. to 9:00 a.m.) and all workers were assumed to depart the site during the PM peak period (4:00 p.m. to 6:00 p.m.). Truck deliveries are typically sporadic throughout the workday; therefore, truck arrivals and departures were assumed to be distributed evenly over the course of a 10-hour workday.

The trip generation estimates during the peak construction period for the Project are summarized in Table 1. To account for the impact construction-related trucks may have compared to construction worker passenger vehicles, passenger car equivalence (PCE) factors were applied to the trip generation estimates. A 1.0 PCE factor was applied

to passenger vehicles, 2.0 PCE for vendor trucks (which also includes trucks hauling water from off-site locations), and 3.0 PCE for haul trucks.

Table 1. Peak Period of Construction Trip Generation Estimates

Vehicle Type	Daily Quantity		Daily Trips	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Non-PCE Adjusted Trip Generation									
Construction Workers[1]	31	workers	62	31	0	31	0	31	31
Vendor Trucks[2]	11	trucks	22	3	3	6	3	3	6
Haul Trucks[2]	4	trucks	8	1	1	2	1	1	2
Peak Trip Total (Non-PCE)			**92**	**35**	**4**	**39**	**4**	**35**	**39**
PCE Adjusted Trip Generation									
Construction Workers	31	workers	62	31	0	31	0	31	31
Vendor Trucks[3]	11	trucks	44	6	6	12	6	6	12
Haul Trucks[3]	4	trucks	24	3	3	6	3	3	6
Peak Trip Total (PCE)			**130**	**40**	**9**	**49**	**9**	**40**	**49**

Source: Covina Reliability Project Air Quality Technical Memorandum (Dudek 2025);
Notes: PCE = passenger car equivalence.
1 Conservatively assumes all construction workers arrive in the AM peak hour and depart the site in the PM peak hour.
2 Vendor and Haul trucks are assumed to arrive and depart the site evenly throughout the workday.
3 Vendor trucks were estimated to have an approximately 2.0 PCE adjusted value, while haul trucks were estimated to have an approximately 3.0 PCE adjusted value.

As shown in Table 1, the peak period of construction would generate approximately 92 daily trips, 39 AM peak hour trips, and 39 PM peak hour trips. After adjustment of trip generation estimates using PCE factors, the peak period of construction for the Project would generate approximately 130 daily trips, 49 AM peak hour trips and 49 PM peak hour trips.

For all other phases of construction, the amount of vehicular traffic is estimated to be less than the peak period. All construction-related traffic would be temporary and short term and would end upon completion of the Project.

SCE Substation Construction Upgrades

Construction activities associated with the SCE substation upgrades would occur concurrently with the gen-tie line stringing and pulling phase. Construction would take approximately 12 months and would generate 36 average daily worker trips and 28 average daily vendor trips during the peak construction phase. As such, this construction phase would generate fewer trips than the peak period identified in Table 1.

Decommissioning

In general, the BESS would be recycled at the expiration of the Project's life (30 years). Most parts of the proposed system are recyclable. Batteries include lithium-ion, which degrades but can be recycled or repurposed. Site structures would be constructed out of steel, or wood, and/or concrete, All of these materials could be recycled at local recyclers. Concrete from deconstruction would be recycled. Local recyclers are available. Metal, and scrap equipment, and parts that do not have free-flowing oil may be sent for salvage.

Fuel, hydraulic fluids, and/or oils contained within Project components would either be transferred directly to a tanker truck and discharged in accordance with local, state, and federal regulations or the entire project component would be hauled offsite and disposed of in accordance with local, state, and federal regulations. Other items that may be stored onsite, that are not feasible to remove at the point of generation, such as smaller container lubricants, paints, thinners, solvents, cleaners, batteries, and sealants, would be kept in a locked utility structure with integral secondary containment that meets Certified Unified Program Agencies and Resource Conservation and Recovery Act requirements for hazardous waste storage until removal for proper disposal and recycling. It is anticipated that all oils and batteries would be recycled. Site personnel involved in handling these materials would be trained to properly handle them. Containers used to store hazardous materials would be inspected regularly for any signs of failure or leakage. Additional procedures would be specified in a Hazardous Materials Business Plan closure plan submitted to the Certified Unified Program Agencies. Transportation of the removed hazardous materials would comply with regulations for transporting hazardous materials, including those set by the Department of Transportation, the U.S. Environmental Protection Agency, California Department of Toxic Substances Control, California Highway Patrol, and California State Fire Marshal.

3.2 Permanent Operations

The proposed Project will be operated remotely through the SCADA system and occasionally, on-site maintenance would be required. It is expected that the fully developed Project will require one or two workers to visit the facility on a weekly basis (4 daily trips or less). The Project site includes approximately 30,000 square feet (SF) of existing light industrial uses that would be demolished as part of the Project. Based on the Institute of Transportation Engineers (ITE) Trip Generation Manual (ITE 2021), 30,000 SF of light industrial uses generate 108 daily trips, 14 AM peak hour trips and 15 PM peak hour trips. Therefore, once constructed, the Project would reduce the number of existing daily vehicle trips generated by the current land use and as such would reduce vehicle traffic compared to the existing baseline conditions.

4 Local and Project Site Access

Primary access to the site will be off Edna Place. The primary access route would originate from the north intersection of Grand Avenue and I-210, heading south on Grand Avenue and turning west on Edna Place. The primary access route from the south would originate from the intersection of Grand Avenue and I-10, heading north on Grand Avenue and turning west on Edna Place or from the intersection of Barranca Avenue and I-10, heading north on Barranca Avenue and turning east on Edna Place.

Based on the Project trip generation presented in Table 1, it is assumed only two heavy haul trips would occur during peak hours. Given the negligible increase in Project-related construction traffic, no impacts to the surrounding roadways are anticipated.

Driveways from Edna Place connecting to the Project site along with internal roads would be constructed to allow fire and maintenance vehicle access. All internal access roads within the Project site would be up to 26 feet wide and cleared, graded, and compacted. All access driveways would be perpendicular to existing roads, are not located near sharp curves or steep grades, and would not cause hazards due to a geometric design feature.

The Proposed Project's internal access roads would be built to Los Angeles County's Fire Department standards.

5 Vehicle Miles Traveled Screening Analysis

On September 27, 2013, Governor Brown signed Senate Bill (SB) 743, with the purpose of streamlining the CEQA review process for several categories of development projects. A key element of SB 743, is the elimination of automobile delay and level of service (LOS) as the sole basis of determining CEQA impacts. The most recent CEQA guidelines, released in December 2018, recommend VMT as the most appropriate measure of evaluating transportation impacts. In accordance with SB 743, the City developed Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment for the purposes of analyzing transportation impacts under CEQA. The City's guidelines identify screening criteria, project baselines and thresholds of significance to determine when a project will have a significant transportation impact.

Based on SB 743 and the revised CEQA guidelines, the City's Transportation Guidelines and the San Gabriel Valley Council of Governments (SGVCOG) VMT Assessment tool, the Project would be screened from a project-level VMT analysis. The Project is in a Low VMT generating area. The VMT screening results are provided as Attachment A.

Furthermore, the Project would result in temporary construction-related trips that would be generated only during the construction phase and once constructed, the Project would reduce vehicle traffic compared to the existing baseline conditions due to the demolition of the existing light industrial uses on-site. As previously noted, the existing uses are estimated to generate 108 average daily trips compared to the 4 daily trips (or less) generated by the Project Therefore, the Project is screened from conducting a VMT analysis and impacts during Project construction and operations are presumed to be less than significant.

6 Summary

The key findings of the transportation analysis in this memo are summarized below:

- It is expected that the fully developed Project will require one or two workers to visit the facility on a weekly basis (4 daily trips or less). The Project would reduce the number of existing daily vehicle trips generated by the existing active commercial, manufacturing, and light industrial uses and as such would reduce vehicle traffic compared to the existing baseline conditions.
- The peak construction phases would temporarily generate approximately 92 daily trips, 39 AM peak hour trips, and 39 PM peak hour trips. With the application of PCE factors the Project would generate approximately 130 daily trips, 49 AM peak hour trips and 49 PM peak hour trips.
- It is assumed only two heavy haul trips would occur during peak hours. Given the negligible increase in Project-related construction traffic, no impacts to the surrounding roadways are anticipated. Furthermore, all construction-related traffic would be temporary and short term and would end upon completion of the Project.
- The Project would be screened from conducting a project-level VMT analysis for both construction and operations. The Project is in a Low VMT generating area. Furthermore, once construction is completed, the project would reduce vehicle traffic compared to existing conditions. Impacts would be less than significant.
- Transit, bicycle, and pedestrian facilities are located in the vicinity of the Project. However, Project construction would occur entirely on-site with no planned lane closures. There would be no impact to

these type of facilities. Furthermore, the Project trip generation is low and no impacts to the facilities are anticipated.
